Werner, ANTON ALEXANDER VON (1843-1915). German painter. Born at Frankfurt-on-Oder, May 9, 1843, he studied in Berlin, Karlsruhe, and Paris. In 1875 he became director of the Berlin Academy of Arts. He died in Berlin, Jan. 3, 1915. Of his many historical paintings, the best known are *The Capitulation of Sedan: The Meeting of Bismarck and Napoleon III*; *Moltke before Paris*; *Moltke at Versailles*; and *The Congress of Berlin*.

Wernher, SIR JULIUS CHARLES (1850-1912). Anglo-Jewish financier. Born at Darmstadt, he spent some time as a clerk in London, served in the Franco-Prussian War, and later went to South Africa, where he became associated with Alfred Beit in the diamond business. In 1884 Wernher settled in London as resident partner of the firm afterwards known as Wernher, Beit & co. He was associated with Rhodes in the management of the De Beers mines, and his firm was the biggest of those that controlled the diamond and gold-mining industries of South Africa. Having become a British subject after settling in London, he was made a baronet in 1905. He died May 21, 1912. See *Luton Hoo*.

Wernigerode. Town of E. Germany, in the *Land* of Saxony-Anhalt. It is situated 43 m. S.W. of Magdeburg on the slopes of the Harz Mts. It is remarkable for its many old buildings, including the town hall (1498), and the churches of S. Sylvester (13th century), S. John (1497), Our Lady (1762), S. Theobaldus (15th century), and S. George (14th century). Above the town is the palace where princes of Stolberg-Wernigerode, the former ruling dynasty, resided. The town was founded in the 9th century, and joined the Hanseatic League in 1267. In 1815 it was incorporated into Prussia, though some privileges were retained until 1876. Overrun by the U.S. 9th army in early April, 1945, after Germany's surrender Wernigerode came within the Russian zone of occupation. Pop. 37,000.

Werther. Principal character in the romance by Goethe, the full title of which is *The Sorrows of Young Werther*. Published in 1774, it had an extraordinary vogue and

has taken its place as a type of emotional or sentimental fiction.

Wesel. Town of W. Germany in the *Land* of North Rhine-Westphalia. It is on the right bank of the Rhine at the mouth of the Lippe, 32 m. N.W. of Düsseldorf. The Berliner Thor was a relic of the old fortifications. The 14th century town hall and the 15th century Gothic church of S. Willibrord were notable buildings. There were sugar-refineries and flour-mills. The town was virtually destroyed by bombing during the Second Great War; the retreating Germans blew up the huge bridge here across the Rhine in 1945. The British 1st Commando bde., first troops to cross the Rhine, in the evening of March 23, 1945, took Wesel before dawn next day (see Rhine: Second Great War). In 1945 Wesel came within the British zone of occupation. Pop. (1935) 25,124; (1950) 13,150.

Weser. River of Germany. The Fulda and Werra unite at Münden, Lower Saxony, forming the Weser, which flows tortuously for 800 m. N. across the N. German plain to enter the North Sea by an estuary 8½ m. across. The largest ocean steamers reach Bremerhaven, and smaller ones attain Bremen. The lower course is canalised in connexion with the Midland and other canals of N. Germany. The chief tributaries are the Aller and Hunte.

Wesermünde. Town and port of Germany. As a town it was created in 1924 by the amalgamation of Geestemünde and Leer, near Bremerhaven at the mouth of the Weser. For long one of the most important fishing centres in Europe, with extensive freezing, packing, and preserving plants, it handled 300,000,000 lb. of fish annually. It was heavily damaged during the Second Great War; afterwards it came into U.S. occupation as a port of entry for U.S. troops and supplies. From 1947 it formed part of the *Land* of Bremen (q.v.). Pop. (1946) 100,611.

Wesley, CHARLES (1707-88). English divine and hymn-writer.

Brother of John Wesley, he was born Dec. 18, 1707, and went to Westminster School and Christ Church, Oxford. At Oxford he and John gathered round them some 15 undergraduates who were the earliest Methodists.

C. Wesley

Ordained in 1735, he went to Georgia, and served Oglethorpe as secretary. Soon after his return to England, Wesley began to preach in various parts of the country, but, like his brother, he remained in the Church of England. He is better known, however, for his hymns, of which he wrote over a thousand, some of the most popular being *Jesu, Lover of my Soul*; *Christ Whose Glory Fills the Skies*; and *Love Divine, All Loves Excelling*. He died in London, March 29, 1788. Wesley's sons Charles (d. 1834) and Samuel (1766-1837) were both musicians of note. See *Hymns*; *consult also* *Life*, J. Telford, 1886; *Memorials of the Wesley Family*, G. J. Stevenson, 1876; C. W., *Evangelist and Poet*, F. L. Wiseman, 1933.

Wesley, JOHN (1703-1791). Founder of Methodism. He was born at Epworth rectory, June 17 (O.S.), 1703, fifteenth of the Rev. Samuel Wesley's nineteen children. Eight had died in infancy and only six were living when John was born. Samuel Wesley was educated for the Nonconformist ministry, but decided to join the Church of England and entered himself as a servitor at Exeter College, Oxford. He was rector of Epworth from 1697 till his death in 1735. His wife Susannah was the youngest child of Dr. Samuel Annesley, ejected from the vicarage of S. Giles, Cripplegate, in 1662. She joined the Church of England and married Samuel Wesley in 1689.

The outstanding event of John Wesley's boyhood was his rescue from the fire which destroyed the old rectory at Epworth, Feb. 9, 1709. In 1714 John entered Charterhouse school, in 1720 he was elected scholar at Christ Church, Oxford, and in 1726 fellow of Lincoln College. Wesley's father had admitted him to the communion when he was eight years old, but at school he became more negligent in his religious duties, though he still read the Bible and said his prayers morning and evening. In his first years at Oxford he was a gay and sprightly student with fine classical tastes, but no notion of inward holiness. Later he decided to take orders, and was ordained deacon in 1725 and priest in 1728. For some time he was his father's curate in Lincolnshire, but he was called back to Oxford to serve as tutor, and Lincoln College was his home till 1735. At Lincoln, about 1728, Wesley began that habit of rising at four o'clock, which he scrupulously observed to the end of his life. He was a diligent and care-

ful tutor, who tried to make those under his charge both scholars and Christians. His brother Charles had gathered round him at Christ Church a little society of earnest students, and when John came into residence he was recognized as the father of the Holy Club, or the Methodists, as they were called.

John Wesley

In 1735 John and Charles Wesley went to Georgia with two friends, Benjamin Ingham and Charles Delamotte. They reached Savannah, Feb. 5, 1736. The calm faith of the Moravians, with whom they sailed to America, had made a deep impression on Wesley's mind, and he spent much time among them in Georgia. His extreme "high church" attitude offended many, and his refusal to grant communion to a Mrs. Williamson, with whom, before her marriage, he had been half in love, led to a warrant for his arrest on a charge of defamation, and his subsequent indictment for improper ecclesiastical usages. In Dec., 1737, he set sail for England without standing his trial.

On May 24, 1738, Wesley attended a Moravian meeting in Aldersgate Street, London, where "I felt my heart strangely warmed. I felt I did trust in Christ, Christ alone, for salvation; and an assurance was given me that He had taken away my sins, even mine, and saved me from the law of sin and death." On April 2, 1739, he began to preach in the open air at Bristol. His converts were gathered into societies, and the work spread rapidly in London and Bristol. In 1742 Wesley found his way to Yorkshire and Newcastle-upon-Tyne. Methodism now began to

spread over England by leaps and bounds, Charles Wesley being as zealous and successful as John himself. George Whitefield's Calvinism separated him from them, but he was also a mighty evangelist, in both England and America. A band of lay preachers gathered round the Wesleys, and despite fierce persecution the work deepened and grew. Wesley sent two of his preachers to America in 1769, and in 1784 set apart Coke as superintendent of the work being carried on there.

Wesley generally travelled about 5,000 miles a year, and his itinerancy ceased only with his death. He is said to have delivered more than 40,000 sermons. He used the simplest words, but he spoke home to the heart and conscience, and the power of his appeals was sometimes overwhelming. He had a genius for organization and was quick to avail himself of every suggestion which might strengthen Methodism. He used the press with greater skill than any religious leader of that generation, and when his cheap books became popular he gave away his money lavishly. He was a social reformer who provided work for the deserving poor, opened dispensaries, and distributed medicines. Wesley preached his last sermon at Leatherhead on Feb. 23, 1791, and died in his own house in City Road, London, March 2. See *Epworth*; *Methodism*; *Savannah*; *Wesley's Chapel*; *Whitefield, G.*

Bibliography. Letters, ed. G. Eayrs, 1914; Journal, ed. N. Curdock, 1916; Lives, L. Tyerman, 1872; R. Southey, new ed. 1839; C. T. Winchester, 1906; J. Telford, new ed. 1906; W. H. Fitchett, 1906; W. H. Hutton, 1927; A. Munn, 1929; C. E. Vulliamy, 1931; B. Dobree, 1933; J. Laver, 1933; M. Bowen, 1937.

Wesley, SAMUEL SEBASTIAN (1810-76). British organist and composer. Son of Samuel Wesley (1766-1837), he was born in London, Aug. 14, 1810, played the organ as a boy in several London churches, and was appointed organist successively at Hereford cathedral, 1832; Exeter cathedral, 1835; Leeds parish church, 1842; Winchester cathedral, 1849; and Gloucester cathedral, 1865, remaining there until his death on April 19, 1876. He is in the front

*Samuel Wesley,
British organist*

rank of composers for the Anglican church, leaving services, anthems, hymn tunes, organ pieces, as well as songs and glees. Blessed Be the God and Father, and Thou Wilt Keep Him in Perfect Peace, are often sung. A Life, by J. T. Lightwood, appeared in 1937.

Wesleyan Methodist Church.

Title from 1891 to 1932 of the Church founded by John Wesley. See Methodism.

Wesley's Chapel. Historic London place of worship. Situated at 49, City Road, E.C.1, it was

Wesley's Chapel, London, and the statue of John Wesley, by J. A. Acton, erected in 1891

built in 1777-78 for John Wesley, from whose time onwards it was regarded as the cathedral of Methodism, though superseded by larger and more modern buildings, such as the Central Hall, Westminster, as the headquarters of the denomination's official assembly and organization.

Wessel, Horst. Nazi "hero" who gave his name to the Horst Wessel Song (*q.v.*).

Wessex. Kingdom of the West Saxons. It covered the country between the Thames valley and the S. coast, excepting the kingdoms of Kent and Sussex. The traditional conquerors and first kings, Cerdic and Cynric, were probably mythical personages, and history begins about A.D. 560 with Ceawlin, who carried his arms as far as the Bristol Channel, and by the victory of Deorham in 577 severed the Britons on the S.W. from the Britons in Wales. During the next 200 years the leading English kingdoms were first Northumbria and then Mercia, Wessex never holding the supremacy, though she had at least one distinguished ruler in Ine (688-726). In 802 Egbert became king of Wessex. In 825 he overthrew the Mercian kingdom, and in 829 was recognized as *Bretwalda*, high king or overlord of the other English kings.

Attacks by Danes or Northmen gradually developed, until by 870 they had practically mastered the northern kingdoms and East Anglia, and then began the struggle for Wessex, in which Alfred the Great proved victorious. At his death in 900, the king of Wessex was *de facto* lord of England on the W. and S. of a line drawn roughly from Chester to London, with a sovereignty, vaguely acknowledged, over the rest of the country, the Danelagh (*q.v.*). It remained for Alfred's son Edward the Elder to translate this sovereignty into a definite mastery, and to make the king of Wessex *de facto* king of England, after which Wessex became merely a geographical expression. (See England: History.)

Thomas Hardy revived the name for the country he wrote about in what are often described as the Wessex novels. The centre of his kingdom was Dorset, but he often extended the scenes of his novels to Oxford and into Cornwall.

West. One of the cardinal points of the compass. At the equinox the point in the sky at which the sun sets is due west; and if an observer in the N. hemisphere faces the sun at noon, the west is to his right. By an obvious symbolism the lands of the sunset have been regarded by many peoples as the home of departed spirits; hence the euphemism "go west," for die. In N. America this phrase has borne a different meaning, for the expansion of civilization in both Canada and the U.S.A. has taken a generally westward direction. The West in a political and sociological sense implies the civilization of the older European nations with its emphasis on reason and science, as against the more fatalistic and mystical outlook of Asia. See Middle West.

Perry West

After G. H. Harlow

West, BENJAMIN (1738-1820). Anglo-American painter. Born at Springfield, Pa., of Quaker parentage, Oct. 10, 1738, he practised portrait painting in America and after three years in Italy

settled in England in 1763. In 1772 he was appointed historical painter to George III. One of the four artists selected to draw up the scheme of the R.A. in 1768, West succeeded Reynolds as president in 1792. His Death of Wolfe did much to establish the realistic treatment of historical episodes, and some of his 400 scenes are at the National Gallery and Hampton Court. He died in London, March 11, 1820. See Boyne, Battle of the; Cromwell illu s. p. 2477; Fulton, R.; Penn, W.

West, MAE (b. 1892). American actress. Born in Brooklyn, Aug. 17, 1892, she went on the stage in all the standard juvenile parts and into the Folies Bergère, N.Y., in 1911. Specialising in revue, she took the lead in Sex, 1927 (a prosecution following), and next year created a furore with Diamond Lil. Her flamboyancy, suggestiveness, drawling voice, and exploitation of fashionable feminine "curves"

Mae West, American actress

led to great success in films from 1932, especially I'm No Angel. In 1944 she returned to the New York stage after 13 years' absence. Diamond Lil was revived by her in London in 1948. Mae West wrote nearly all her own shows. The R.A.F. life jacket was named after her. See "Mae West."

West, REBECCA (b. 1892). British author. Cicily Isabel Fairfield was born in Kerry at Christmas, 1892, and attended George Watson's ladies' college, Edinburgh. In 1930 she married H. M. Andrews. Her journalistic career began in 1911 with a post on Freewoman, from which she soon moved to the Clarion. Influenced by H. G. Wells, whom she in return influenced, she became a controversial writer and critic of force and originality. Early novels included The Return of the Soldier, 1918; The Judge, 1922; among literary studies were Henry James,

Rebecca West, British author

1916; and D. H. Lawrence, 1930; also *The Strange Necessity*, 1928, and *The Thinking Reed*, 1936. Black Lamb and Grey Falcon, 1942, described Yugoslavia. For *The Meaning of Treason*, 1948, which described British treason trials after the Second Great War, Rebecca West received an international award in Washington.

West Africa, BRITISH. Political term which includes the four British colonies of Gambia, Gold Coast, Nigeria, and Sierra Leone. Each is separately described.

West Africa, FRENCH. Overseas territory of France, bounded N. by Morocco, Algeria, Tunisia, and Libya; W. by the Atlantic Ocean, British, Spanish, and Portuguese colonies, and Liberia; S. by the Gulf of Guinea, Gold Coast, and Nigeria; and E. by French Equatorial Africa and the Anglo-Egyptian Sudan. Within this area is included the greater portion of the Sahara and the Sudan. French W. Africa is divided into eight colonies—Dahomé, French Guinea, Ivory Coast, Mauritania, Niger, Senegal, French Sudan, Upper Volta—each administered by a governor; and the whole is under the control of a governor-general, with headquarters at Dakar (*q.v.*). Area, 1,815,768 sq. m. Pop. 15,996,000.

West Africa, PORTUGUESE. This colony of Portugal is also called Angola and so indexed.

West African Frontier Force, ROYAL. British colonial military formation. Established in 1901, it consists of the Nigeria, Gold Coast, Sierra Leone, and Gambia regts., all of which had been formed in 1897 by Col. Sir F. (later Lord) Lugard to maintain order amongst the then warring tribes of the British West African dependencies. The force is financed by the British govt. and is voluntarily enlisted; it includes members of most of the W. African tribes. The majority of native personnel are Mahomedans.

European officers, warrant officers, and senior N.C.O.s are seconded from the British army, there being one white sgt. to each platoon. There are a certain number of native N.C.O.s and W.O.s, but these have no authority over Europeans. A limited number of commissions are granted to W. Africans. The force has its own signal, transport, engineer, armoured, and artillery detachments manned by native personnel. Uniform consists of khaki drill blouse and shorts, and felt slouch hat bearing the force's palm tree badge and the letters R.W.A.F.F.

West African Frontier Force badge

During the Second Great War the R.W.A.F.F. had 160,000 African privates and N.C.O.s, and 16,000 European officers and senior N.C.O.s. Brigades served in Somaliland, Abyssinia, and the Middle East. The Gold Coast regt. formed the main assault column at the capture of El Wak in Dec., 1940, and was one of the units to invade Italian Somaliland, bearing the brunt of the fighting across the Juba. Two R.W.A.F.F. divs., the 81st and 82nd, served in the Burma campaign. The 81st arrived in India in 1943, the first native African formation to serve outside Africa; it included the Nigeria regt., which served in the Chindit operations of 1944. Its divisional emblem was a spider. The 82nd div., which arrived in India in 1944, had as emblem crossed assegais and head roll; it fought in Arakan, capturing Mowdok, Oct. 8, 1944.

A special decoration, the R.W.A.F.F. distinguished conduct medal, is awarded to native and European personnel who distinguish themselves in action. There is also a R.W.A.F.F. long service and good conduct medal.

West Bengal. State of the Union of India, formed 1947 from the former Bengal province. It includes all the territory in the former prov. lying roughly W. of a line drawn from the mouth of the Hariabhangha river to the point on the Padma, tributary of the Ganges, opposite Sarda (which stands in E. Bengal, Pakistan). Thence the boundary takes a N.W. direction along the Ganges to a little W. of Sibganj, and then it moves N.E. from the Ganges to a point near Hilli (E. Bengal), turning again N.W. to the Nagar river, which it reaches a few miles E. of Barsoi in Bihar. There is an enclave farther north, mainly based on the Darjeeling and Jalpaiguri districts.

Westbourne. Former tributary of the Thames, which in 1834 ceased to be an open stream. It rose at Hampstead and flowed generally S. through Kilburn and Paddington, crossed Bayswater

In the First Great War, 17,000 men served in the W.A.F.F., which had a major part in the conquest of Togoland and the Cameroons. The force was given the prefix Royal in 1928.

Road, and passed through the depression that is now the Serpentine. A fragment of the old course may still be seen in the shape of an iron pipe at Sloane Square underground rly. station. At Pimlico the Westbourne has become the Ranelagh sewer which enters the Thames W. of Chelsea Bridge. It gave its name to the Westbourne Park and Westbourne Grove dist. of Paddington.

Another Westbourne is a suburb of Bournemouth, the W. terminus of the trolley bus system.

West Bridgford. Urban dist. of Notts, England. It stands on the S. of the Trent and is connected by Trent Bridge with the city of Nottingham. Here is a famous cricket ground used for international and county matches; another ground came to the council on the death of its owner, Sir J. Cahn. West Bridgford was the first urban dist. in England to supply its own passenger transport services. The parish church of S. Giles, restored 1872, shows fine examples of ancient and modern architecture and furnishings. The Luttrell family, now settled at Dunster, Somerset, appear to have held the manor until the mid-14th century. Pop. 23,000. East Bridgford is a village lying 7 m. down the Trent.

West Bromwich. Co. bor. and market town of Staffs, England. Situated 6 m. N.W. of Birmingham, with a rly. station, it is the centre of a busy mining and manufacturing district, and is well served by rlys. and canals.

West Bromwich arms

The parish church of All Saints was entirely rebuilt in 1872. Other edifices are the town hall, 1874-75, with a clock tower 130 ft. high; the market hall; the institute; and the old half-timbered Oak House, formerly a residence of the Turton family, and now a public museum. Dartmouth Park is a public recreation ground. The principal trade is in ironwork; there are smelting furnaces and foundries, and brickmaking, tar distillation, and making springs are some of the more important industries. Forming a bor. constituency, West Bromwich sends one member to parliament. Market day, Sat. Pop. 85,870.

West Bromwich Albion. Professional Association football club. Founded in 1879 under the name of West Bromwich Strollers, the

team originally played in Dartmouth Park, their present ground being the Hawthorns in Birmingham Road, West Bromwich. After several successful seasons as an amateur organization, they adopted professionalism in 1885, and three years later joined with eleven other clubs to form the Football League. They have four times been relegated to the second division, in 1901, 1904, 1927, 1938; and secured promotion to the first in 1902, 1911, 1931, 1949. In 1920 they won the first division championship, and they carried off the F.A. Cup in 1888, 1892, and 1931. Their colours are dark blue and white striped shirts, with white shorts.

Westbury. Market town and urban dist. of Wilts, England. It stands on the Biss, and is a

Westbury, Wiltshire. Parish church of All Saints

rly. junction 96 m. W. by S. of London. The chief building is the fine Perpendicular church of All Saints. Westbury is supposed to have been a residence of the kings of Wessex, the site of their palace being still shown. It was a corporate town in the Middle ages, had two M.P.s until 1832, then one until 1885, and now gives its name to a co. constituency. At one time it was a centre of cloth manufacture, holding fairs and markets. It still trades in agricultural produce, and has a cement factory. Cut on Bratton Hill in 1778, the Westbury white horse, one of the famous downland chalk figures, measures 175 ft.

Westbury, RICHARD BETHELL, 1st BARON (1800-73). British lawyer. Born at Bradford-on-Avon, June 30, 1800, and educated at Bristol and Wadham College, Oxford, he was called to the bar at the Middle Temple in 1823. In 1840 he became a Q.C. and was soon a leader of the chancery bar. In 1851 Bethell entered the Commons as M.P. for Aylesbury, and next year was solicitor-general in the Liberal ministry. Having been attorney-general, 1856-58 and

since 1859, he became lord chancellor in 1861, succeeding Campbell and was made a baron. Westbury was a zealous law reformer, taking a special interest in the codification of statutes. He died July 20, 1873. He is remembered by pithy expressions, and once, when the horses of his carriage bolted, urged the coachman to "drive into something cheap." The title came in 1930 to Richard Bethell (b. Oct. 9, 1914), 4th baron.

West Chester. Borough of Pennsylvania, U.S.A., the co. seat of Chester co. Situated 26 m. W. of Philadelphia, it is served by the Pennsylvania rly. Red brick mansions and huge oaks line the streets. There are a grain elevator, planing mills, and manufactures of farm implements. Pop. 13,289.

Westchester Cup. Contest at polo between England and the U.S.A. First played at Hurlingham in 1900, when England won, it was an irregularly held event up to 1914. During 1921-30 it became a triennial event, the U.S.A. winning at each meeting, as they did also in 1936 and 1939.

Westcliff. For this Essex seaside resort, see Southend.

Westcott. Hamlet of Bucks, England. In the parish of Waddesdon, it is situated on Akeman Street, 6 m. N.W. of Aylesbury. Here an aerodrome was established in 1943 for training R.A.F. air crew, and taken over by the ministry of Supply in 1946 as a research station for the development of war rockets. The establishment has laboratories devoted to experiments on combustion chambers; combustion kinetics; heat transfer; and fuels. Much preparatory work in connexion with missiles for the Australian rocket range at Woomera (q.v.) was carried out at Westcott.

Westcott, BROOKE FOSS (1825-1901). British divine. Born near Birmingham, Jan. 12, 1825, he was educated at King Edward's

school there and at Trinity College, Cambridge, of which he became a fellow after a brilliant career. Ordained in 1849, he was a master at Harrow from 1852

B. F. Westcott, British prelate

to 1869, when he was appointed canon of Peterborough. In 1870 Westcott became professor of divinity at Cambridge, in 1883 canon of Westminster, and in 1890 bishop of Durham. He died July 27, 1901. Westcott was one of the greatest Biblical scholars of his time, and also successful as a bishop. His greatest work was done on the N.T.; he wrote History of the N.T. Canon, 1855, while with Hort he prepared an edition of the testament, and was one of its revisers. He took a keen interest in social questions and missionary work. *Consult* Life, B. F. Westcott, 1903; J. Clayton, 1906.

Westerham. Market town of Kent, England. It is 5 m. by rly. W. of Sevenoaks. The parish church of St. Mary is a Perpendicular edifice containing interesting monuments to local families. Below the church is Quebec House, where Gen. James Wolfe, born at the vicarage, spent his early years. The house now contains a large collection of Wolfe relics, and a statue to him stands on the green. Market day, Wed. Pop. 3,368.

Westerham, Kent. The statue of Gen. James Wolfe, who was born in the vicarage close by

To the S. is Chartwell, home of Winston S. Churchill. Near the town is the village of Westerham Hill, situated on the highest ground in Kent; Biggin Hill (q.v.) is also in the vicinity.

Westermarck, EDWARD ALEXANDER (1862-1939). Finnish sociologist. Born at Helsingfors (Helsinki), Nov. 20, 1862, and educated there, he made an international reputation with his book on the

History of Human Marriage, written in English and published in London in 1891. A fifth edition, rewritten, was published in three vols. in 1922. In 1906-08 appeared, also in English, *Origin and Development of the Moral Ideas*. Westermarck spent much of his time in England, and during 1907-30 was professor of sociology in London university. His memoirs appeared in English in 1930. Westermarck died Sept. 4, 1939.

Western, SQUIRE. Character in Fielding's novel, *Tom Jones*. Presented as uncouth in speech, broad-humoured, quick-tempered, and a hard drinker, he is taken as a fair portrait of the typical English squire of the 18th century. Sophia Western, heroine of the story, is his daughter, and his manner towards her is also characteristic of the period.

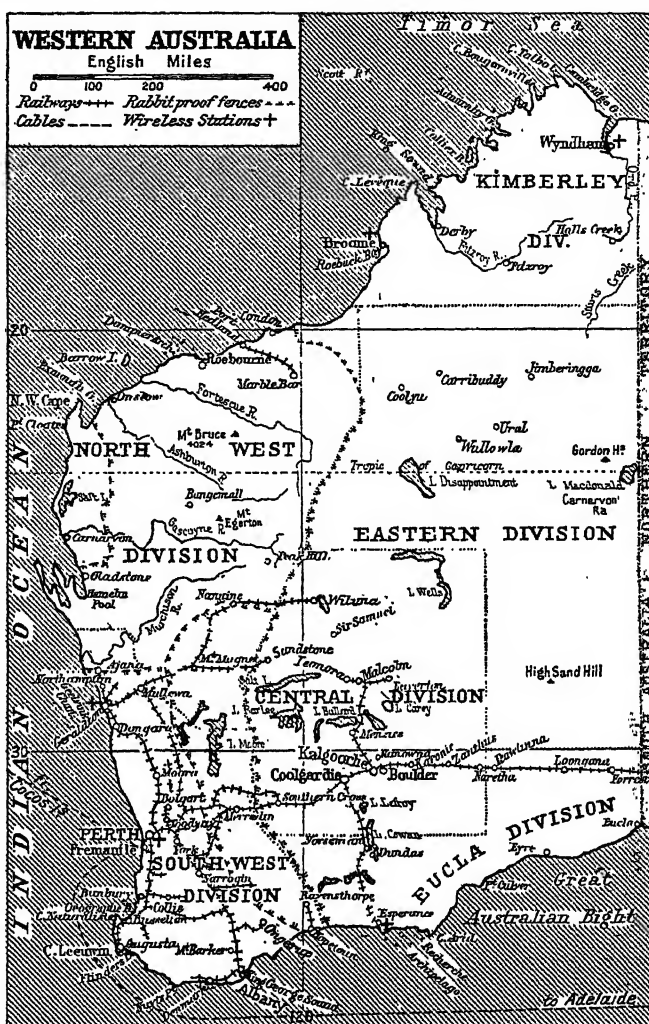

Western Approaches. Term applied in both Great Wars to the shipping lanes of the Atlantic where they enter British home waters. The N.W. approaches include the routes followed by vessels from Canada and the U.S.A.; the S.W., routes from Central and S. America, Africa, and the Far East. After the defeat of France in the Second Great War, German submarines, and to a lesser extent aircraft, operating from bases on the Atlantic seaboard of occupied Europe, attacked Allied shipping here, and in 1941 Western Approaches Command was formed under Admiral Noble to coordinate defence. See *Atlantic Battle*.

Western Australia. State of the Australian commonwealth, comprising the W. portion of the island. It lies W. of meridian 129° E., has an area of 975,920 sq. m. with a greatest length of 1,500 m. and width of 1,000 m. Except for a narrow coastal margin,

Western Australia arms

W. Australia is a plateau at an average level of 1,300 ft. On the W. side, especially in the Kimberley and N.W. divisions, are elevated parts of the plateau, where peaks rise above 2,000 ft. The highest points are Mt. Bruce, 4,024 ft., and the Stirling Range, 3,640 ft. The middle of the state has a rainfall of less than 10 ins. and is a desert where the chief sign of life is the spinifex, a mass of prickles reaching a height of 2 ft. with coarse grass above this for another 4 ft. Across this region of drought stock routes have been

discovered, for water may be obtained by digging wells. To the N. rainfall increases to 30 ins. near Wyndham, and S.W. to 40 ins. near Cape Leeuwin. This rainfall is insufficient for large rivers; N. of Ninety Mile Beach the Fitzroy is the largest; S. of it occur the Fortescue, Murchison, and Swan. The Kalgoorlie goldfield obtains its water by pipe-line from the coast. On the W. coastal strip the annual range of temp. is less than 20° F., compared with over 30° F. in the interior, where frosts occur as far N. as the tropics.

It is probable that a Dutch navigator, Dirk Hartog, who in 1616 sailed along a considerable part of the W. coast, was the first discoverer of Western Australia. The English first appeared on the Australian coast in 1688, when

Dampier landed on Shark Bay. Both the Dutch and Dampier were repelled by the desolate sand-dunes of New Holland (the name given by the Dutch). There was no permanent settlement until 1829, when land near the Swan river was annexed for Gt. Britain by Fremantle, and Stirling founded the Swan river colony where Perth and Fremantle now stand. Not until 1890 had the country responsible govt. Australian federation in 1901 found W. Australia divided, with a strong minority against entering the commonwealth which continued to work for secession until the Second Great War.

The event of greatest economic importance was the discovery of gold in the Kimberleys in 1885. In 1893 the famous golden mile at Kalgoorlie was discovered, still one

of the richest mines in the world. The total value of Western Australian gold production up to 1945 was nearly £300,000,000. Other important minerals include coal and pyrites. Sheep breeding for wool and the overseas fat lamb market is important, the number of sheep exceeding 10,000,000. Dairy produce for export is of increasing value. Wheat, oats, and barley are grown on a large scale, as are apples. Timber is taken from the extensive forests. At Shark Bay there is a pearl-shell fishery.

Perth, the capital, has a pop. of over 200,000; Fremantle has 27,000; most of the other townships, except Kalgoorlie, Boulder, Bunbury, and Geraldton, have fewer than 5,000 people. Total pop. (1948 est.) 523,330.

W. Australia is represented in the commonwealth parliament by ten senators and eight representatives. The local parliament, under a governor who represents the crown, comprises a legislative council of 30 members and a legislative assembly of 50 members, all of whom are elected; a cabinet of responsible ministers controls the administration. *Consult W.A.: A History*, J. S. Battye, 1924; *W.A., 1829-1929*, H. P. Colebatch, 1929; *An Empty Land*, J. W. Kirwan, 1934.

Western Australia, UNIVERSITY OF. Institution established and endowed by the state legislature in 1911, and opened in 1913. The buildings are at Perth, and the faculties are arts, science, and engineering.

Western Desert. Term applied to the part of the Libyan desert which lies within Egypt. It is an arid region of sandy dunes, except in a few coastal districts and oases. The principal oases, Bahariya, Siwa, Dakhla, Kharga, and Farafra, receive their water from a sandstone bed about 400 ft. below the surface. Geographically the Western Desert is the inner portion of the Libyan and Sahara deserts. It has an est. pop. of 70,000, mostly nomadic Beduin, who raise camels and small cattle. The only towns are Mersa Matruh and Sollum. It was first called the Western Desert in the First Great War, when the British were fighting the Senussi, to distinguish it from the Sinai, or Eastern Desert, where other operations were taking place. In the Second Great War it formed the last British defence against the Axis invaders of Egypt, and at Alamein the springboard for the campaign that eventually drove the Axis out of N. Africa.

By extension the term Western Desert was then sometimes applied to the desert within Libya also. *See North Africa Campaigns.*

Western Front. Term used during the First and Second Great Wars for the land battle zone in Europe to the W. of Germany.

Western German Republic. Federal republic formed 1949 in the British, U.S., and French zones of occupation in Germany. Area 94,634 sq. m. Pop. 47,254,900. Capital, Bonn. *See Germany in N.V.*

Western Union. Military, economic, social, and cultural alliance between the U.K., France, and the Benelux countries (Belgium, the Netherlands, and Luxembourg). This came into existence as the result of a 50-year treaty, signed at the Brussels Palais des Académies, March 17, 1948. Subsequently the following representative bodies were set up: (1) a permanent consultative council, consisting of the five foreign ministers, meeting at least once every three months; (2) a permanent organ of the council, consisting of diplomatic representatives, meeting at least once a month; (3) a military committee, consisting of the five defence ministers; (4) a finance committee, consisting of the five finance ministers; (5) a committee to consider steps for the further promotion of European unity. The military committee set up a permanent organization, consisting of the following committee of commanders-in-chief, together with high-ranking officers of the nations not otherwise represented:

F.M. Viset, Montgomery (U.K.), permanent mil. chairman; Gen. de Lattre de Tassigny (Fr.), c.-in.-c. land forces, Western Europe; Air Marshal Sir J. Robb (U.K.), c.-in.-c. air forces, Western Europe; Vice-Adm. R. Jauyard (Fr.), flag officer, Western Europe.

A motion in the U.S. senate, July, 1948, expressed the principle of U.S. military support for the Western Union, and later U.S. service representatives assisted the work of the Western Union military committee in London. The North Atlantic treaty powers who in 1949 pledged mutual assistance and defence included all the Western Union countries, and in Dec., 1950, the military side of the Western Union alliance was merged in the North Atlantic treaty organization. *See in N.V., Europe; North Atlantic Treaty.*

Westfield College. London college for women. It was founded in 1882 for the preparation of women for degrees of the

university of London, of which it is a constituent college. Its buildings are at Hampstead. There are some 200 students.

Westgate-on-Sea. Town and seaside resort of Kent, England. It is 2 m. W. of Margate, with a rly. station, and is built on the two sides of a promontory. Pop. 4,500.

West Ham. Co. bor. of Essex, England, part of Greater London. Extending to the Thames with the

West Ham arms

Lea for its W. boundary, it is an industrial centre, inhabited almost wholly by working people employed in the rly. shops at Stratford, at the docks, and in soap, sugar, and other manufacturing establishments. The church of All Saints, parts of which are very old, has interesting monuments. West Ham Park, 80 acres, formerly the property of the Gurneys, has been public since 1874. Before the Second Great War this was the tenth biggest town in England, with pop. 294,278; during that war one quarter of the houses was destroyed by bombing, and afterwards the bor. was re-planned as 16 neighbourhood units, with 10,000 pop. in each. Its former four M.P.s were reduced to two by the Act of 1948.

West Hartlepool. Co. bor. of Durham, England. It stands just S.W. of Hartlepool, being 245 m. N. by W. from London, and is served by rly. The principal buildings are the town hall, market hall, public library, Athenaeum, and several modern churches. The borough includes Seaton Carew, a watering-place, and Stranton with an old church—All Saints. West Hartlepool is entirely a modern seaport, dating from the opening of the Durham coalfields. With Hartlepool (*q.v.*) it has a fine large harbour, protected by a breakwater. It includes docks which cover over 350 acres. Timber, iron ore, and sugar are among the imports. Large shipbuilding yards, engineering works, and saw and flour mills are among the other industries. The Hartlepoons together elect an M.P. Market day, Sat. Pop. 68,134.

Westhoughton. Urban dist. giving its name to a co. constituency, of Lancs, England. Lying 5 m. E. of Wigan, it has five rly. stations. There are cotton factories, manufacturing chemists, and large collieries. Pop. 16,018.

West India Regiment. Former regiment of the British army. It originated in 1778 as the South Carolina Corps, consisting of volunteers, white and black, raised to fight the French in the West Indies. It received its later name in 1798 and took part at

Briar Creek, Stone Ferry, and Eutaw Springs in the closing years of the American War. It helped to defend Dominica, 1805, to capture Martinique, 1809, and Guadeloupe, 1810. Later service included quelling the rebellion in Jamaica, and the Ashanti War. During the First Great War the regiment went to Egypt, Palestine, and took part in the conquest of Cameroons. In 1926 it was disbanded. See British West Indies Regiment.

West Indies. An archipelago between N. and S. America. It separates the Atlantic Ocean from the Caribbean Sea and the Gulf of Mexico, and is divided into the Greater and Lesser Antilles. It includes 40 inhabited islands, with a total area of some 100,000 sq. m., two-thirds of which comprise the islands of Cuba and Haiti.

The Greater Antilles consist of Cuba, Haiti, Jamaica, and Puerto Rico; these islands contain mountainous cores, which represent the unsubmerged portions of an older continental land mass, Antillia.

The Lesser Antilles consist of three chains of islands and islets; the outer Caribbees, inner Caribbees, and Coralline islands. The outer Caribbees, mainly the Virgin Islands, Antigua, Tobago, with parts of Guadeloupe, Barbados, and Trinidad, continue the mountain system of Antillia to connect with the mountains of Venezuela. The inner Caribbees, Montserrat, Dominica, Martinique, St. Vincent, St. Lucia, Margarita, and Curaçao, etc., are young volcanic islands.

The Coralline islands, Barbuda, the Bahamas, and parts of Trinidad and Barbados, form an outer chain on the Atlantic margin. Temperatures are always high, rain falls at all seasons, especially on the windward slopes, the lowlands are forested, and the fauna is akin to that of S. America. At Kingston, Jamaica, mean temp. ranges only from 77° F. in Jan. to 82° F. in July, and rainfall is 34 ins. Terrible hurricanes may occur, especially in Sept.-Oct. The aborigines, Arawaks and Caribs, have almost entirely disappeared, the present pop. including Europeans, negroes, and half-breeds, with a few Indian coolies. Sugar, tobacco, fruits, spice, cacao, and dyewoods are the chief products.

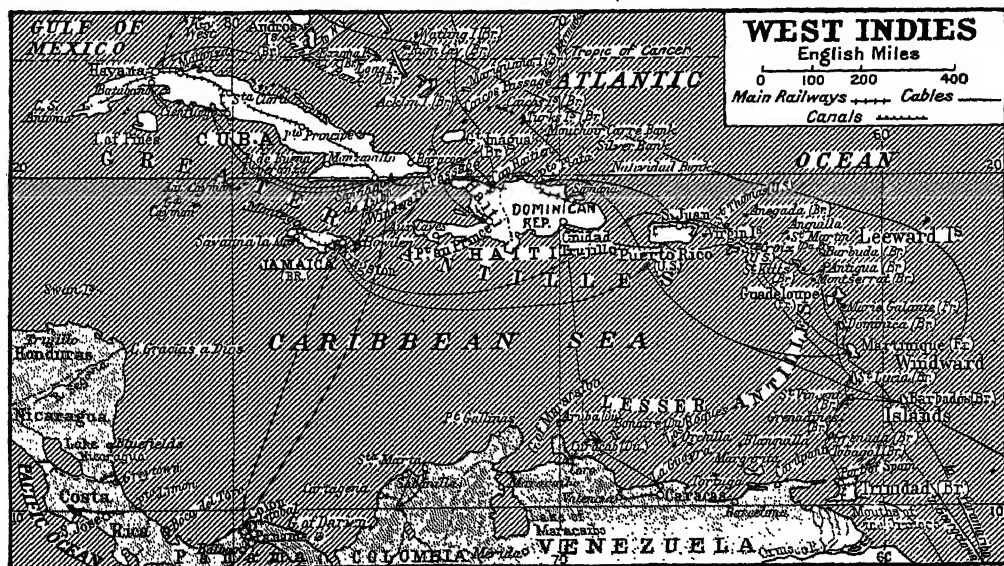

Politically two facts are predominant, American penetration and British colonial expansion. American penetration has been active since 1898 and the Spanish-American War; Cuba was for long virtually an American protector-

ate; Puerto Rico was annexed in 1898; the Dominican Republic and Haiti, though independent, show many signs of U.S. influence; and the Virgin Islands, formerly the Danish West Indies, were purchased from Denmark by the U.S.A. in 1917. In 1940 sites in the Bahamas, Jamaica, Trinidad, Antigua, and St. Lucia were leased to the U.S.A. for 99 years for the construction of military bases.

The British West Indies comprise six groups: Bahamas, Barbados, Jamaica with Turks Islands, Leeward Islands, Trinidad and Tobago, and Windward Islands. Martinique, Guadeloupe, S. Pierre, and Miquelon are French; Curaçao is Dutch; Margarita belongs to Venezuela. Details concerning the several islands will be found in articles under their names.

Westinghouse, GEORGE (1846-1914). American engineer and inventor. Born Oct. 6, 1846, at Central Bridge, N.Y., he entered his father's machine-manufacturing business. In 1864 he became assistant engineer in the U.S. navy, and after graduating at Union College, Schenectady, became known as an ingenious inventor. He devised improvements in the system of signalling. In 1869 he brought out the rly. brake known

West Indies. Map of the large American archipelago which separates the Atlantic Ocean from the Caribbean Sea

by his name, which was adopted throughout the U.S.A., in Great Britain, and on many European lines (*see* Brake). Westinghouse inaugurated the use on a large scale of A.C. for lighting and power, and the transmission of electric current over long distances. He founded large power plants and workshops at Pittsburgh, and was responsible for the electrical equipment of the London Metropolitan rly. President of the American Society of Mechanical Engineers, 1910, he died March 12, 1914.

G. Westinghouse, American inventor

West Kent Regiment, QUEEN'S OWN ROYAL. A regiment of the British army. Raised in 1755 as the 50th Foot, it went on garrison duty in India and the West Indies. Converted into a marine unit, it won its first battle honour under Nelson at Copenhagen in 1807.

West Kent Regiment badge

The regiment again became infantry to serve in the Peninsular War, winning particular distinction at Vimeiro; at that time the regimental facings were black, and in the heat of battle the men wiped their faces with their cuffs, so blackening their skins, hence their nickname of Dirty Half Hundred. In 1827 the 50th Foot was called the Duke of Clarence's West Kent Regiment, but when the duke became William IV in 1830 the title was changed to the Queen's Own. The West Kents fought in the Crimea at the Alma and Inkerman and led the assault on the Redan. They were at the relief of Lucknow and in the Maori War of 1864.

In 1881 the West Kents absorbed as their second battalion the 97th Foot, which had been raised in 1824 as the Earl of Ulster's regiment. Both battalions served in the Gordon relief expedition, and the regiment was represented by one battalion in the S. African War. Eighteen battalions were raised for the First Great War, gaining the battle honours: Mons; Ypres, 1914, '15, '17, '18; Hill 60; Somme, 1916, '18; Vimy, 1917; Italy, 1917; Gallipoli, 1915; Gaza; Defence of Kut; Sharquat. In the Second Great War the regiment was in the defence of Arras, 1940;

in Burma, where heavy casualties were sustained near Kohima; in the defence of Leros and Cos; and in the liberation of N.W. Europe. The regimental depot is at Maidstone, and the badge depicts the white horse of Kent.

West Kilbride. Town

and seaside resort of Ayrshire, Scotland. It stands upon Kilbride Burn and is 30 m. by rly. W. of Glasgow. It has two fine churches, and several institutions for invalids. The town is a popular holiday centre. An outstanding landmark is Portencross Castle, where is an ancient cannon washed up from the wreck of a Spanish galleon at the time of the Armada. Pop. 3,946.

West Kirby. Seaside resort of Cheshire, England. It stands on the Dee estuary, in the Wirral peninsula, 8 m. W. by S. of Birkenhead, and has a rly. station. Here is a partly Norman church with timber altar. Pop. 16,628.

Westland. Provincial dist. of South Island, New Zealand. It lies along the W. coast, averaging 27 m. in width and 250 m. in length, and having an area of 4,880 sq. m. Here is Mt. Cook, the highest point in the Southern Alps (12,349 ft.). Cattle rearing and some dairying are carried on, and there are numbers of sawmills. Westland contains the Brunner coal area, for which Greymouth is the port. Pop. est. 17,700.

West Lothian. County of Scotland. Its area is 120 sq. m., and it has a coast-line of about 17 m. on the Firth of Forth, being bounded E. by Midlothian and W. by Lanarkshire and Stirlingshire. The surface varies from the low coast belt to the undulating and hilly region of the interior, where there are elevations of over 1,000 ft. The only rivers of any size are the Avon, on the Stirlingshire border, and the Almond, separating W. Lothian from Midlothian. Linlithgow Loch is the only lake, Agriculture is the staple industry, oats being the chief crop. Wheat, barley, and grasses are also grown, and there are a number of dairy farms. There are large quantities of coal

West Lothian. Map of the Scottish county formerly called Linlithgowshire

and iron ore, while oil is extracted from shales here. The co. is served by rlys. and the Union Canal. The chief town is Linlithgow; others are Broxburn, Borrowstounness or Bo'ness (the chief harbour), Bathgate, and S. Queensferry, whence the Forth Bridge goes to Fife. Small industrial centres are Arma-dale, Uphall, Kinnell, Whitburn, and Winchburgh. There are some antiquarian remains in the county, but outside Linlithgow not a great deal of historical interest. The co. with all its burghs forms one co. constituency. Pop. 86,000.

Westmacott, SIR RICHARD (1775-1856). British sculptor.

Born in London he studied in Rome under Canova, returning home in 1797. He became A.R.A. in 1805, R.A. in 1811, and was knighted in 1837. The reliefs on the Marble Arch, London, are his work, and he executed the colossal so-called Achilles statue in Hyde Park. He died in London, Sept. 1, 1856.

Sir Richard Westmacott, British sculptor
After J. Derby

Westmark. Name given in 1940 by the Nazis to Lorraine, the Palatinate, and Saarland. Saarbrücken was the capital, and the R.C. diocese of Metz was abolished. Like Ostmark (Austria) on the other side of the Reich, it was supposed to represent a bastion of Germanic culture against that of other peoples (*Mark*=march; cf. marches, meaning border country).

Westmeath. County of Leinster, Eire. With a land area of 681 sq. m., it is wholly inland. It lies chiefly in the basin of the Shannon, which river, with Lough

Ree, forms its western boundary. The other chief rivers are the Brosna, Inny, and Dale; the largest of many lakes are Sheelin, Kinala, Derravaragh, Owel, Lene, Ennell, and Gloire. The surface is varied between hill and valley, and is in parts boggy. The pasturing of sheep, cows, horses, and other animals forms the chief industry. There is some textile industry, the manufacture of flannels and coarse linens. The county is served by rlys. and the Royal and Grand Canals. With co. Longford it returns five member to the Dáil.

Mullingar is the county town; other places are Athlone, Castlepollard, and Moate. Westmeath was originally part of Meath, being made a separate county in 1543. Of its many antiquities, the chief are the ruins of Multyfarnham Abbey. Pop. 54,880.

Westminster. City and met. bor. of the county of London. The name West Minster first occurs in a charter of King

Westminster arms

Offa in 785, endowing an already established monastery with land at Aldenham. The monastery was built on Thornéa, a desolate island of some forty acres formed by two outlets of the Tyburn and a cross-ditch, the E. boundary being the Thames. Of these outlets the southern crossed the S.W. corner of what is now Dean's Yard and ran the length of Great College Street to turn the Abbey Mill at the end, while the northern entered the Thames about the end of Cannon Row, the cross-ditch running along Great Smith Street.

The establishment of a royal palace at Westminster in the reign of Canute, or possibly earlier, contributed, with Edward the Confessor's new church and monastery, to the early growth of the town, the first highways of which were King Street from Charing village to the Palace and Tothill Street from the Abbey westwards. An increasing population necessitated the building of the first church of S. Margaret about 1100, to be followed by larger edifices in the reigns of Edward I and Henry VII. The early boundaries of the town were defined by the limits of the abbot's manors of Hyde, Neyte, and Eye, with perhaps the practically uninhabited manor of Paddington. Hyde may be taken roughly to correspond with the

present park of that name, Neyte taking in the Chelsea area, and Eye the marshy area from Hyde Park to Tothill Street. A court of justice was established at Westminster; and this was to persist after the king had migrated from the immediate palace to palaces at Whitehall, St. James's, Kensington, and further afield.

The growth of the town followed a normal course until the ravages of the Black Death in 1348, after which an already considerable trade in wool received an unnatural stimulus to reconstruction by the appointment of Westminster in 1353 as a wool staple for ten years. By the reign of Elizabeth the line of houses from London to Westminster by way of the Strand (*q.v.*) was continuous.

Considerable alterations in the neighbourhood of abbey and palace took place in the reigns of George II and George III. The importance of Tothill Street vanished with the opening of Victoria Street in 1851, the making of which involved the demolition of a mass of dirty courts and houses. The Thames Embankment (*q.v.*) brought in some 30 acres from the river shallows, and Northumberland Avenue was opened in 1876 to connect it with Trafalgar Square. The laying out of Parliament Street in the years following 1756, with the opening of Westminster Bridge six years earlier, were other changes.

During Four Centuries

Before the dissolution of the monastery, Westminster was governed by the abbot as lord of the manor, with such modifications as were implied by the king's palace and courts of justice. In 1540 it became a city with the establishment of a bishopric which was to last only ten years. In the R.C. Church it is the seat of an archbishop. In 1544 the city and liberty of Westminster was created a borough to return two members to parliament, a source of constant rivalry between the vestries of S. Margaret and S. Martin-in-the-Fields. The precinct of S. Martin-le-Grand in London shared in the election as part of the endowment by Henry VII of his new chapel in the Abbey. From 1590 the vestry of S. Margaret became "select," receiving statutory recognition in 1663. In 1856 many of its duties were transferred to a board of works, but in 1888 the united vestries of S. Margaret and S. John were granted complete control of local matters. By the redistribution of parl. seats, 1948, Westminster

was united with the City of London in one constituency.

In 1900 Westminster attained civic government under a mayor and corporation. The creation of other boroughs cut away slices of the old domain; but Westminster still includes Hyde Park, its N. boundary being Bayswater Road and Oxford Street. German bombs in the Second Great War killed 1,100 persons and injured over 5,000, while 1,200 buildings were destroyed. Westminster may be regarded as the centre of the British Commonwealth, for here the kings have been crowned; the mother of parliaments has sat, with brief interludes, since the beginning of parliamentary government; the cenotaph in Whitehall commemorates the British dead in both Great Wars. Pop. est. 103,440. See Caxton Hall; London, and map facing p. 5255; Parliament, Houses of; S. Margaret's; Westminster Abbey; Westminster School. Consult Antiquities of Westminster, J. T. Smith, 1807-09; W.: A Historical Sketch. H. F. Westlake, 1919.

Westminster, MARQUESS AND DUKE OF. British titles held by the family of Grosvenor (*q.v.*). Sir Richard Grosvenor (1731-1802) was made Earl Grosvenor in 1784, and his son Robert, 2nd earl (1767-1845), who held political office under Pitt, was made marquess of Westminster in 1831. The 3rd marquess, Hugh Lupus Grosvenor (1825-99), was made a duke in 1874; he was a follower of Gladstone until Home Rule was introduced.

His grandson, Hugh Richard Arthur (b. March 19, 1879), became in 1899 the 2nd duke. He served with distinction during the First Great War, especially when in command of armoured cars operating against the Senussi (*q.v.*) in 1916. The duke owes his great wealth to the London property acquired in 1676 by Sir Thomas Grosvenor by marriage with the daughter of Alexander Davies. He has a town house in Davies Street, W.1, and owns Eaton Hall with about 50 sq. m. in Cheshire and Flintshire. After the Second Great War he actively interested himself in rehousing tenants of his bombed London property.

1st Duke of Westminster, British politician

Westminster Abbey. General view of the choir and nave, looking west from the chapel of S. Edward the Confessor, whose shrine is seen in the centre foreground. Beyond the 15th century stone screen is the choir

Westminster, STATUTES OF. Name given to three Acts of parliament. The earliest, in 1275, in the reign of Edward I, reaffirmed many earlier laws, confirmed charters and the rights of the Church, secured the freedom of elections, reformed legal procedure, and limited feudal aids. The second, in 1285, in the same reign, reformed abuses in connexion with the laws of dower, advowson, and manorial jurisdiction, compelled the counties to indict felons, regulated the appointment of justices and constables, provided for the better policing of towns and highways, and obliged men of each class to furnish themselves with suitable arms.

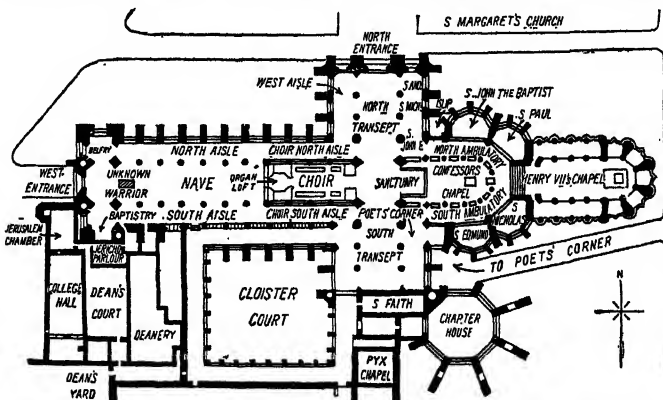

The Statute of Westminster, 1931, a result of the imperial conferences of 1926 and 1930, laid down the principle of dominion status. The imperial parliament was not to legislate for any dominion without the consent of the latter, and laws made in a dominion were to be valid even if repugnant to English law. The dominions "are autonomous communities within the British Empire, equal in status, in no way sub-

ordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the crown, and freely associated as members of the British commonwealth of nations."

Westminster Abbey. Officially the collegiate church of S. Peter in Westminster. Its early history, and that of the Benedictine monastery associated with it, are shrouded in legend. The first

church of which record exists stood in the 8th century to the W. of the present structure and was dedicated to S. Peter. It was rebuilt in Norman style, 1050-65, by Edward the Confessor; of this structure a few fragments exist in the Chapel of the Pyx and the Undercroft beneath the Islip chapel. Henry III added a lady chapel, rebuilt by Henry VII, and began a reconstruction that continued until the time of Wren and Hawksmoor, who repaired and raised the W. towers, 1713-40. The design of the N. transept was remodelled by Sir Gilbert Scott and J. L. Pearson in 1890. The abbey was lighted by electricity in 1913. Air-raid damage in the Second Great War amounted to £135,000; five of the abbey houses were destroyed, but no really historic feature was lost.

The church is cruciform; extreme exterior length, including Henry VII's chapel, 530 ft.; interior length of nave, 166 ft., breadth 38 ft. 7 ins., height 101 ft. 8 ins.; interior breadth of nave and aisles, 71 ft. 9 ins.; length of choir 155 ft. 9 ins., breadth 38 ft. 4 ins., height 101 ft. 2 ins.; height of lantern, 151 ft.; height of W. towers, 225 ft. 4 ins. The main entrance is at the W. end. The work of five centuries, Westminster Abbey displays several styles; apart from the Perpendicular glories of Henry VII's chapel, it is claimed as one of the best examples of E.E. architecture in existence. It has been the burial-place of many sovereigns and other illustrious dead, statesmen, warriors, writers; the scene of the coronations of kings and queens since Harold, and of innumerable royal weddings and other national ceremonies. In the chapter house the house of commons met from about 1289 to 1547. There are 11 chapels

Westminster Abbey. Ground plan showing position of the chapels and other ecclesiastical buildings

The pseudo-Gothic towers flanking the west front were completed in 1740, from designs left by Sir Christopher Wren. At the foot of the S. tower, right, is the 14th century Jerusalem Chamber, now the chapter room. In the foreground is Westminster School Crimean War memorial; in the right distance, the Victoria Tower of the Houses of Parliament

WESTMINSTER ABBEY: WEST FRONT OF ENGLAND'S NATIONAL SHRINE

in addition to Henry VII's. The E. angle of the S. transept has been known as Poets' Corner since about 1766, from the tombs and monuments of Chaucer, Spenser, Shakespeare, and other great poets. In the abbey are the tomb of the Unknown Warrior of the First Great War, and a memorial window to airmen in the battle of Britain. The cloisters and other parts of the monastic buildings date from the 13th and 14th centuries. *See* Belfry; Caxton, illus. p. 1874; Chantry; Chapter House; Coronation; Henry VII's Chapel; Jerusalem Chamber; Poets' Corner; Stall; Unknown Warrior.

Westminster Assembly. Body of lay and clerical members appointed by the Long Parliament in 1643 to decide upon the form of Church government and the doctrine to be adopted in England and Scotland. The assembly held its first session on July 1, 1643, and sat until Feb. 22, 1649. The result of the deliberations of the assembly was to supersede the Prayer Book by the Directory of Public Worship, to formulate a Presbyterian system of Church government, and to draw up the Westminster Confession of Faith.

Westminster Bank. British banking organization. In 1918 the London, County, and Westminster Bank merged with Parr's Bank, the combine holding also a controlling interest in the Ulster Bank. Next year the Nottingham and Notts Banking Co. was acquired. The name was changed in 1923. This was the first bank granted a coat of arms, 1928. Head office is at 41, Lothbury, London, E.C.2; there are over 1,000 branches.

Westminster Bridge. London bridge across the Thames from the Houses of Parliament to St. Thomas's Hospital. Replacing a stone structure of 1739-50; it was designed by T. Page and built 1856-62. Its total length is 1,160 ft.; width, 85 ft. It has seven iron arches on granite piers, the central arch being of 120 ft. span and 22 ft. above high water, and the others in pairs of 115 ft., 104½ ft., and 94½ ft. respectively. The foundations of the granite piers are 30 ft. below low-water mark. *See* Parliament.

Westminster Cathedral. Seat of the R.C. archbishop of Westminster. It stands near Victoria Street, London, a building of red brick in early Christian Byzantine style, with a domed campanile, 283 ft. in height. Designed by J. F. Bentley (1839-1902), its foundation stone was laid June 29, 1895, and it was consecrated in

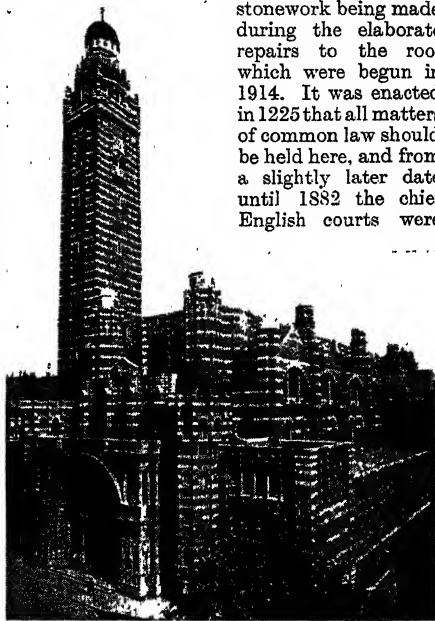

1910. The nave is 234 ft. long and 60 ft. wide, and the total area is 54,848 sq. ft. *See* Rood illus.

Westminster College. Presbyterian theological college. Originally established in Queen Square, London, to train students for the ministry of the Presbyterian Church of England, it was removed in 1899 to its present site between Pound Hill and Northampton Street, Cambridge. It was erected at a cost of £46,000, the chief contributors being Mrs. Agnes Lewis and Mrs. M. D. Gibson (*q.v.*).

Westminster Gazette. Former London newspaper, amalgamated in 1928 with The Daily News. Founded as an evening Liberal organ by Sir G. Newnes, in 1893, it was edited first by Sir Edward Cook (*q.v.*), who was succeeded in 1896 by J. A. Spender (*q.v.*). Under the managing directorship of Sir C. Starmer the paper appeared as a morning journal from 1921. *See* News Chronicle.

Westminster Hall. Historic London building, the most notable remaining part of the old palace of Westminster. The original structure was completed in 1097 for

William Rufus. During 1394-99 Richard II raised the walls, provided the oaken hammer-beam roof, and added the N. porch and towers. Many later repairs and alterations followed, notable discoveries of Norman stonework being made during the elaborate repairs to the roof which were begun in 1914. It was enacted in 1225 that all matters of common law should be held here, and from a slightly later date until 1882 the chief English courts were

Westminster Cathedral. West front and campanile of the principal Roman Catholic church in England

held, first in the hall, and then in new buildings erected on the W. side.

Here Richard II was deposed, Charles I condemned, Oliver Cromwell installed as lord protector; here,

among others, Wallace, More, Anne Boleyn, Strafford, the Seven Bishops, and Warren Hastings stood their trial. The hall, which is 290 ft. long, 68 ft. wide, and 92 ft. high, was in the 17th century partly occupied by booksellers, law stationers, and other tradesmen; it was the scene, until the time of George IV, of the coronation banquets. The bodies of Gladstone, Edward VII, George V, and victims of the disaster to the airship R101 lay here in state. Here a joint assembly of lords and commons offered to George V addresses on his silver jubilee. Parliament was addressed here in the

Westminster Bridge, London. View of the bridge, showing the Houses of Parliament, and the clock tower housing Big Ben

Westminster Hall, London. Interior of the ancient hall, showing the magnificent hammer-beam roof

Second Great War by Gen. Smuts. South of the members' entrance on the E. side entry is gained to the cloisters and to S. Stephen's Crypt.

Westminster Hospital. Medical institution in Westminster, London. Established as a charity in 1719, it was moved to another site, adjoining the Middlesex Guildhall, in 1834, and was enlarged in 1900-01. In 1939 it was rebuilt on yet another site in S. John's Gardens, Horseferry Road. It has 421 beds, and training schools for nurses, radiographers, and physiotherapists.

Westminster School. English public school. Originating in a school attached to Westminster abbey, whence its name of S. Peter's College, Westminster, it was refounded first by Henry VIII, and then in 1560 by Elizabeth. The school is built around Little Dean's

Westminster School arms

Yard. The scholars of Elizabeth's day were accommodated in the old granary of the abbey, and their dining hall, or college hall, was the refectory of the abbot. The great school room was once the monks' dormitory. Boys who gain scholarships on the Elizabethan foundation are known as king's scholars. Most of them live in college, but a few are day boys. There are about 300 boys not on the foundation.

and Southey. The school was badly damaged by German bombs in 1941. *Consult Annals of Westminster School, J. Sargeant, 1898; Record of Old Westminsters, G. H. R. Barker and A. H. Stenning, 1928.*

Westminster Theatre. London playhouse, in Palace Street, S.W.1. It was opened Oct. 7, 1931, under the management of Amner Hall, the first production being James Bridie's *The Anatomist* (revived

Westminster School. Corner of the quadrangle with chapel entrance and fives courts

at the same theatre, 1948). Other plays included *The Lake*, 1933; *The Dog Beneath the Skin*, 1935; *Mourning Becomes Electra*, 1937; *The Zeal of Thy House*, 1938; *It Depends What You Mean*, 1944. For a time the theatre acquired a reputation as a home of experimental work by writers of the school of W. H. Auden and C. Isherwood. The theatre, which was for a short time in the hands of the Oxford Group (*q.v.*), seats 680.

Westmorland. Northern county of England. With an area of 789 sq. m., it is inland save that it has a strip of coast at the mouth of the Kent on Morecambe Bay, and is almost wholly mountainous. The Pennine Chain enters the county in the N.E., and in the E. is a hilly moorland district, where are several heights over 2,000 ft., among them Milburn Forest, Dufton Fell, and Wild Boar Fell. The W. portion of the county forms part of the Lake District (*q.v.*), Helvellyn (3,118 ft.) being the highest point. The chief rivers are the Eden, Lowther, Kent, and Lune, and the lakes include Grasmere, Hawes Water, Rydal Water, and parts of Ullswater and Windermere. In the valleys the soil is fertile, but much of the land is suitable only for feeding sheep. Marble, graphite, lead, and slate are worked.

Appleby is the county town, Kendal and Ambleside being other places. There are castles at Brough, Appleby, and Kendal. Brougham Castle, Lowther Castle, and Levens Hall are modern residences. The only religious house of importance was the abbey at Shap. Westmorland was made a county soon after 1100. It was divided into two baronies, Appleby and Kendal, and later into wards for protection against the Scots. One M.P. is returned. Pop. 65,408. See map in following p.

LITERARY ASSOCIATIONS. Ephraim Chambers was born at Kendal, and John Langhorne, poet and translator of Plutarch, was born at Winton, Kirkby Stephen. Wordsworth lived at Grasmere and Rydal, and is buried at Grasmere; places associated with his poetry are too many to particularise. At the Nab, near Rydal, lived

Hartley Coleridge, who is also buried at Grasmere, and in the same house De Quincey lived later. At Fox How, near Rydal, resided Thomas Arnold and his gifted family. Elleray, near Ambleside, was the home of John Wilson, better known as Christopher North, and at Ambleside, Harriet Martineau lived for many years. Beatrix Potter, writer of children's tales, lived at Sawrey, where she had a farm; and local scenes figure

in her coloured pictures. See Lake District and bibliography.

Westmorland, EARL OF. English title held by the families of Neville and Fane. The first grant of the title, 1397, was to Ralph (1364-1425), 4th Baron Neville of Raby, who was prominent in the reigns of Henry IV and V, and is the character to whom Shakespeare makes Henry V address the famous "band of brothers" speech. Charles (1543-1601), 5th earl, who was involved in R.C. plots, fled to the Netherlands, where he died, having lost the earldom by attainder in 1571. In 1624 the title was granted to Sir Francis Fane. His great-grandson John (d. 1762), 7th earl, fought under Marlborough. On his death the title passed to a kinsman Thomas, whose great-grandson John (1784-1859), 11th earl, was a distinguished soldier and diplomatist. From him the title descended in 1948 to David (b. March 31, 1924), 15th earl. An eldest son of the earl bears the courtesy title of Lord Burghersh.

Weston. One of the commonest English place names. It occurs specially frequently in Somerset. The parish of Weston, on the Avon and the rly. 2 m. N.W. of Bath, was the scene of a battle in the Civil War, 1643. Weston Bampfylde lies 7 m. N.E. of Yeovil; Weston-in-Gordano is near the Severn estuary, 3 m. N.E. of Clevedon; Weston Zoyland is in the middle of Sedgemoor, and in its church lay the wounded of Monmouth's army in the battle of 1685. Weston-super-Mare has a separate entry.

Weston, DAME AGNES E. (1840-1918). A British philanthropist, known as the Sailor's Friend. She was born in London, but removed to Bath, and in 1868 began her philanthropic work by visiting hospitals. Later she started a series of monthly letters to seamen,

Agnes Weston, British philanthropist

Westmorland, England. Map of the mountainous county

popularly called Bluebacks, which attained a circulation of over half a million. Active superintendent of the Royal Naval Temperance Society, in 1876 with Miss (later Dame) Sophia Wintz she opened a Sailors' Rest at Devonport, and later at Portsmouth. Miss Weston was created G.B.E. just before she died Oct. 23, 1918. Her publications include *My Life Among the Bluejackets*, 1909, and the periodical *Ashore and Afloat*. *Consult Sparks Among the Stubble*, C. Maud, 1924.

Weston, SIR RICHARD (1591-1652). English agriculturist. The son of a Surrey knight, he was educated in Flanders, succeeding to his father's estate at Sutton, near Guildford, in 1613. He was the first to introduce the system of canal and river locks, but is best

known for his introduction of Flemish agricultural methods. His mansion, Sutton Place, was the seat of Lord Northcliffe, 1905-16.

Weston-super-Mare. Co. bor. and seaside holiday resort of Somerset,

set, facing the Bristol Channel, 15½ m. W. of Bristol, with a rly. station on a loop line. The town has grown within a century from a small fishing village to "the largest resort between Lancashire and Land's End," with a fine promenade, two pleasure piers, a large marine lake, winter gardens, etc., catering for holidaymakers from

Weston-super-Mare, Somerset. The sea front from the air

western and midland industrial centres. In the pleasant woods on a spur of the Mendips, immediately above the town and protecting it from the N., is the site of an ancient British camp. The wide expanse of estuary mud revealed at low tide is supposed to have health-giving properties; it also gives the sea a greyish-brown appearance. Weston-super-Mare gives its name to a co. constituency. Pop. est. 37,470.

West Orange. Town of New Jersey, U.S.A. It was formed from part of Orange, in Essex co., in 1862. There is rly. connexion with New York, about 12 m. to the E. In Llewellyn Park are fine mansions. Edison retired to W. Orange in 1887 to perfect the gramophone and other machines. The steel and concrete Edison plant, covering 29 acres, makes electrical devices and accessories. Another product of the town is Portland cement. Pop. 25,662.

Westphalia. Region of Germany, until 1945 a prov. of Prussia. Containing the bulk of the Ruhr industrial area, it is Germany's chief workshop. The prov. of Westphalia had an area of 7,804 sq. m. and a pop. of over five millions. Its capital was Münster, its main cities Dortmund, Gelsenkirchen, Bochum, Hagen, and Bielefeld. Situated between the Rhineland and the Netherlands on the W., Hanover on the N., and Hesse-Nassau on the E. and S., it had wooded heights—Teutoburger Wald, average 1,450 ft.; Weser Mts., average 1,050 ft.; the Sauerland, up to 1,000 ft. in the centre; with several mts. up to 2,760 ft. Of its rivers, the Weser and Ems gave access to the North Sea, the Lippe and Ruhr to the Rhine, and canals link the Ruhr valley with other waterways. There are several big dams, e.g. Möhne, with power stations, and a large network of gas and electrical supply direct from the mining district. Though agricultural as to 62 p.c. of the total area, Westphalia had most of its people engaged in industry, above all coal mining and the iron and steel industry based thereon. Textile trades, making of glass, ceramics, paper, cigars and tobacco, sausage making, ham curing, and brewing gave other employment.

The pop. is very much a type of its own, Lower Saxon, and in buildings, customs, dress, and language (*Platdeutsch*), preserves old traditions. In the Ruhr towns, however, it is mixed with many immigrants; before the Second Great War there were more than

100,000 Poles, and many others of Slav origin. About 53 p.c. were R.C., 46 p.c. Protestant, the former under an archbishop at Paderborn.

Westphalia about 700 was one of the three tribal areas of the Saxons; from the 9th century to 1180 it was part of the duchy of Saxony; then until 1807 a duchy on its own, including after 1500 some 50 smaller sovereignties, largely of the Church, and parts of what were later the Netherlands and Belgium (Utrecht, Liège). Napoleon turned it, together with Hanover, Hesse, and Brunswick, into a kingdom under his youngest brother Jerome, separating from it in 1810 N. Hanover. That kingdom was nearly twice the size of the prov. acquired by Prussia at the Vienna congress, 1815. During both Great Wars Westphalia was a main German arsenal; consequently during the Second Great War its towns were very severely bombed from the air, and in 1945 the country was the scene of desperate battles. Under British occupation after that war, it was joined with the N. half of the Rhine prov. to form the Land of N. Rhine-Westphalia (pop. 11,808,000), with capital Düsseldorf. See Ruhr.

Edgar Stern-Eubarth, Ph.D.

Westphalia, TREATY OF. General peace that closed the Thirty Years' War (*q.v.*), Oct. 24, 1648. Fruitless negotiations began in 1636, but formal discussions were opened in 1644 between the R.C. powers at Münster, and between the Protestant powers at Osnabrück, the war continuing meanwhile. The chief parties were the emperor, the kings of France and Sweden, and the leading German princes.

Religious toleration was formally established except in the Hapsburg territories. The lands of spiritual powers were assigned to those who occupied them on Jan. 1, 1624, or in some instances 1618. Sweden received W. Pomerania, parts of Mecklenburg, the archbishopric of Bremen, the bishopric of Verden, and representation in the diet. France was confirmed in her possession of Metz, Toul, and Verdun, and obtained the sovereignty of most of Alsace. Saxony received Lusatia. Chief gainers were Brandenburg—which obtained E. Pomerania, Cleves, Mark, Ravensberg, the bishoprics of Halberstadt, Minden, and Kammin, and ultimately Magdeburg—and Bavaria, whose elector was confirmed in his dignity and in the possession of the Upper Palatinate. The independence of Switzerland and of

the United Provinces, or Dutch Netherlands, was recognized. The old empire was transformed into a loose federation of some 300 independent states, Austria and Brandenburg-Prussia the biggest.

West Point. American military academy. It stands on the right bank of the Hudson river, in Orange co., N.Y., about 50 m. N. of the city of New York. Established in 1802, it occupies an elevated site amid picturesque river scenery, the land on which it stands covering 3,575 acres, including Constitution Island, presented to the govt. by Mrs. Russell Sage in 1908. Candidates for admission must be between 17 and 22 years old. Eight are appointed from each state on the nomination of its senators and four from each congressional district on the nomination of congressmen. Other nominations bring the total up to 2,490. The course of study lasts four years. Successful cadets may be commissioned as 2nd lieutenants in the U.S. army.

Westport. Urban dist., seaport, and market town of Mayo, Eire. Standing in Clew Bay, at the mouth of a small river, it is 10 m. S.W. of Castlebar, and has a rly. station. The chief trade is export of grain. There is some trade in provisions, and mineral waters and clothing are manufactured. Market day, Thurs. Pop. 3,238.

Westport. Seaport of South Island, New Zealand. Once the best harbour in the island, it now often becomes bar-bound. It stands at the mouth of Buller river, in Nelson dist., and is the terminus of a rly. line, 30 m. long, serving the adjacent coalfield. Pop. 4,240.

West Punjab. Territory of Pakistan. Under the partition of the Punjab in 1947, this prov. of the former British India was divided between India (E. Punjab) and Pakistan (W. Punjab). Roughly the boundary is the Ravi river at the point where it enters the Punjab from Kashmir, a little W. of Pathankot. It breaks away S. from the river in conformity with the boundary of the Lahore district towards Kasur, and joins the Sutlej opposite Ferozepore. It then follows this river, and after leaving E. Punjab, marks the border of the Muslim state of Bahawalpur till it reaches the Indus. W. Punjab includes the whole of the Rawalpindi and Multan divisions, the districts of Sialkot, Gujranwala, Sheikhupura, and parts of the Lahore and Gurdaspur districts.

West Riding. One of the three administrative divisions (O.E. *thriding*, third part) of Yorks, England. It is in many respects a co. of itself. Heavily industrialised, it is the main centre of the English woollen and steel industries. It contains most of the great manufacturing cities of Yorkshire—Leeds, Bradford, Sheffield, Huddersfield, Halifax, and Wakefield, the capital. Other towns are Barnsley, centre of a coalfield; Goole, the only port; Rotherham; Doncaster, Penistone, and Keighley. There is much beautiful scenery around Harrogate and Knaresborough, and in the river valleys, notably Wharfedale. This riding is bounded W. by Lanes and Westmorland, N. by the N. Riding, E. by the E. Riding and Lincs, S. by Notts, Derbyshire, and Cheshire. Area, 2,775 sq. m., which would make it alone the biggest English county. Pop. 3,352,555.

West Riding Regiment. Former name of the regiment of the British army now known as the Duke of Wellington's Regiment, and so described in this work.

West River. English trans. of the name of the Chinese Si-kiang (*q.v.*).

West Surrey Regiment. Regiment of the British army. Raised in 1661 as the 2nd Foot, it is the

West Surrey
Regiment badge

oldest English line regt. It was formed to garrison Tangier, which had passed into English possession as part of the dowry of Catherine of Braganza on her marriage to Charles II. In her honour it was called the Queen's Regiment; in 1881 it was given the territorial designation of West Surrey; its present title is The Queen's Royal Regiment (West Surrey).

In 1685 it took part in the suppression of Monmouth's rebellion; from its badge, the paschal Lamb, and the name of its colonel, Kirke, the regt. was nicknamed Kirke's Lambs, earning notoriety for brutal hunting out of Monmouth's supporters. In 1695 it fought at Namur and at Tongres, where gallantry earned the prefix Royal. Throughout the greater part of the 18th century, the Queen's served as marines, and for their work on the Glorious First of June received the privilege of wearing naval buttons. After service under Abercromby in Egypt, this regt. moved to the Peninsula and fought at Vimero, Salamanca, Vittoria, and Toulouse. It was in Afghanistan, 1838-39;

the Kaffir War, 1851-53; China War, 1860; Burma, 1885-86; and the Tirah operations. It helped to relieve Ladysmith and fought at Colenso.

Twenty-five battalions were raised in the First Great War and earned the battle honours: Retreat from Mons; Ypres, 1914, '17, '18; Somme, 1916, '18; Messines, 1917; Hindenburg Line; Vittorio Veneto; Gallipoli, 1915; Palestine, 1917-18; Mesopotamia, 1915-18; N.W. Frontier, 1916-17. In the Second Great War battalions served in France, 1940, N. Africa; Italy; Burma; N.W. Europe. The regimental depot is at Guildford.

West Virginia. State of the U.S.A. One of the S. Atlantic group, its area is 24,181 sq. m. It occupies part of the Allegheny Plateau (3,500 ft.), and slopes down to the Ohio river in the W.; the E. boundary is formed by the Allegheny Mts., which have various parallel ridges, extending towards the centre of the state. The Big Sandy, Guyandot, Great and Little Kanawha, and Monongahela rivers are tributary to the Ohio, which drains almost the entire region; in the N.E. the Potomac partly separates the state from Maryland.

Nearly three-quarters of the surface is forest, and lumbering ranks first among West Virginia's industries. The fertile soil yields excellent crops, and dairy farming thrives. Apples, plums, peaches, and grapes are grown, and the annual crop of tobacco is some 3,000,000 lb. An enormous coal area produces nearly 150,000,000 tons per annum, and there is also a considerable output of petroleum, natural gas, salt, and iron. West

Virginia university at Morgantown and other institutions, including the state college for negroes, offer higher education. The state has nearly 4,000 m. of rlys. Two senators and six representatives are sent to congress. Charlestown is the capital; other principal cities include Huntington, Wheeling, Clarksburg, Parkersburg, and Fairmont.

For many years after the War of Independence West Virginia was part of the state of Virginia,

although some of its inhabitants from time to time attempted to break the connexion. In 1862 the electors ratified an ordinance providing for the new state, which was admitted to the union a year later. British linguists have found a close approximation to Elizabethan speech in the less accessible parts of the state. Pop. 1,901,974. *Consult* W. V.: The Mountain State, C. H. Ambler, 1940.

West Wall. Name given to the series of fortifications, sometimes called the Atlantic Wall, constructed along the coasts of France, Belgium, and the Netherlands by the Germans during the Second Great War. It included revolving forts, massive concrete emplacements with camouflaged guns, storage galleries excavated in the cliffs, underground guard-rooms, underwater mines and spikes. The work of forced labourers directed by the Todt (*q.v.*) organization, the wall was believed by the Germans to be impregnable. It might have proved to be so in and near the Channel ports, where it was strongest, because the Germans anticipated attempts at landing to be made there. The wall's existence was one of the reasons for the Allied decision to land farther W. *See* D-day; Dieppe; Dieppe Raid.

Westward Ho! Village and seaside resort of Devon, England. Situated on Bideford Bay in the

Westward Ho! The quiet Devonshire resort, situated at the foot of Northam Burrows

urban dist. of Northam, 3 m. N. of Bideford, it takes its name from Kingsley's novel (*v.l.*). It is famous for its pebble ridge and golf links. Here from 1874 to 1904 was the United Services College, at which Rudyard Kipling was educated and of which he gives a picture in *Stalky & Co.*

Westward Ho! Romance of adventure by Kingsley, first published in April, 1855, with the title of *Westward Ho!*; or the Voyages and Adventures of Sir Amyas

Leigh, knight. Partially founded on fact, it tells of Elizabethan sea-captains and their adventures on the Spanish Main.

Westwood, JOSEPH (1884-1948). Scottish politician. Born Feb. 11, 1884, he left his Buckingham school at 13 and was an errand boy before going into the mines. In 1918 he was chosen political organizer of Scottish miners. Entering parliament as Labour M.P. for Peebles and S. Midlothian, 1922, he lost the seat 1931, but was returned for Stirling and Falkirk 1935. Knowledgeable about health, housing, and local govt., he was under-secretary for Scotland in the coalition govt. 1940-45, becoming secretary in the Labour govt. 1945. He resigned 1947, and was killed in a road accident in Fife, July 17, 1948.

West Yorkshire Regiment. Unit of the British army. Raised in 1685 to assist in the suppression

West Yorkshire Regiment badge

of the Monmouth rebellion, it came on to the establishment next year as the 10th Foot. It went overseas with William III and took part in all Marlborough's victories. Gallant conduct during the Jacobite rising of 1715 earned the present badge, the white horse of Hanover. The regt. was at the defence of Gibraltar in 1727, and formed part of Wade's force against Charles Edward in 1745. The 10th Foot served throughout the American War of Independence, then was at the sieges of Valenciennes and Tournai, then sent to the West Indies.

At the outbreak of the Napoleonic Wars it was drafted to Egypt, where it fought under Abercromby. Moving to the Peninsula, it was with Moore at Corunna, and served with Wellington both in Spain and at Waterloo. It gained further honours in the Crimean War and the Indian Mutiny, and served in the New Zealand War of 1861-63. For its gallantry in the Afghan War of 1879-80, the regt. was granted the title of Prince of Wales's Own. It was at the relief of Ladysmith.

Thirty-one battalions were raised in the First Great War, and earned the battle honours: Armentières, 1914; Neuve Chapelle; Somme, 1916, '18; Ypres, 1917, '18; Cambrai, 1917, '18; Villers Bretonneux; Tardenois; Piave; Suva. In the Second Great War battalions fought in

France, 1940; Eritrea; N. Africa; Burma; and Java. One was converted to an armoured regt., and another became a tank recovery unit. The regimental depot is at York.

Wetaskiwin. City of Alberta, Canada. About 150 m. N. of Calgary and 40 m. S. of Edmonton, it is the junction where the main Winnipeg-Edmonton line of the C.P.R. meets the Calgary-Edmonton rly. A judicial centre, the town lies in the heart of good mixed farming country, with some lumbering and coal mining in the vicinity, and has natural gas wells which are municipally owned. Grain elevators, flour milling, dairying, and cheese making provide employment. Pop. 2,318.

Wet Bulb. Term applied to a thermometer whose bulb is covered with a piece of muslin wetted with water. As a result of the evaporation of moisture into the atmosphere, the bulb loses heat and the temperature falls below that of an ordinary dry-bulb thermometer similarly exposed. The combination of the two instruments is called a hygrometer (*q.v.*), the extent of the wet-bulb depression relative to the dry-bulb temp. representing a measure of the humidity. Body temp. cannot be below the wet-bulb temp. Values of 100° F. have been recorded in the Red Sea region and at Sierra Leone.

Wetherby. Market town of the W. Riding of Yorks, England. It stands on the Wharfe and on the Great North Road, 3 m. S.E. of Spofforth, with a station on the rly. The chief buildings are the parish church of S. James and the town hall. Trade in agricultural produce is the principal occupation. Steeplechase meetings are held. Market days, Mon. (cattle) and Thurs. Pop. est. 3,920.

Wethered, JOYCE (b. 1901). Maiden name of Lady Heathcoat-Amory, British golfer, born Nov. 17, 1901. A member of Worpleston club, she sprang to fame in 1920 by beating the hitherto invincible Cecil Leitch in the final on her first appearance in the English women's championship, and won the finals by enormous margins in each of the next four years. She was woman champion of Great Britain in 1922-24-25-29. Joyce Wethered has been described as further ahead of rivals than any other player at any sport. She married Sir John Heathcoat-Amory in 1937. Her brother Roger (b. 1899) was an amateur golfer of international status,

who tied for the British open championship in 1921, losing on replay.

Wetter. Another spelling of the name of a Swedish lake entered as Vätter in this Encyclopedia.

Wetterhorn. Swiss Alpine mountain in the Bernese Oberland. It rises to 12,166 ft., near Grindelwald, as the Mittelhorn. The other two summits are the Rosenhorn, 12,110 ft., and Hasli Jungfrau, 12,150 ft. The earliest ascents were made in 1844 and 1845. See Grindelwald.

Wettin. Name of a German family, from which the royal family of Great Britain is descended. The name is taken from a small town on the Saale, N.W. of Halle, where about 1000 a German noble family lived and ruled the surrounding district. In 1089 one Henry was made margrave of Meissen, and a later margrave, also a member of the family, became elector of Saxony in 1423. The family split up into several branches, and until 1918 members were kings of Saxony and dukes of the four Saxon duchies. From one of them sprang Albert, the husband of Victoria and father of Edward VII. Other members of the family were Ferdinand, who in 1836 married Maria, queen of Portugal, and whose descendants sat on the Portuguese throne until the revolution of 1910; and Ferdinand, until 1918 tsar of Bulgaria. See Guelph; Windsor.

Wetzlar. Town of W. Germany, on the river Lahn, 42 m. E.N.E. of Coblenz, in the Land of Hesse. It is an important rly. junction and a centre of the optical industry, also having iron foundries and making ovens. From 1693 to 1806 it was the seat of the supreme court of the Empire, where Goethe worked as a young lawyer and wrote Werther. A remarkable cathedral with a Roman tower (12th cent.) half serves the Protestant, half the R.C. community. Other old buildings commemorate the free city of the 12th century, developed from an ancient royal castle. After a short French occupation, Wetzlar fell in 1815 to Prussia. Overrun by the U.S. 1st army at the end of March, 1945, it lay after Germany's surrender in the U.S. zone of occupation. Pop. 25,600.

Wewak. Harbour and airfield on the N. coast of British New Guinea. Occupied by the Japanese in 1942. Wewak's excellent harbour was developed by them into one of their principal supply bases in New Guinea, and

from early 1943 was a frequent target for Allied air raids. Australian troops advancing overland reached the coast W. of Wewak during April, 1945. On May 13 elements of the Australian 6th div. landed a few miles E. of it, took the peninsula and the airfield the same day, but secured the harbour only after heavy fighting on June 5. All Japanese remaining in New Guinea at the time of the surrender of Japan yielded at Wewak on Sept. 13. *See* New Guinea: Second Great War.

Wexford. County of Leinster, Eire. It has 90 m. of irregular and dangerous coast-line indented by Wexford Harbour, Ballyteige Bay, Bannow Bay, and Waterford Harbour. The surface is mainly a succession of low hills, but becomes mountainous in the N. and N.E. (Mt. Leinster, 2,610 ft.). The Slaney and Barrow are the chief rivers; Carnsore Pt. is the S.E. extremity of Eire. The clay soil yields oats, barley, potatoes, and turnips, while sheep, cattle, pigs, and poultry are exported to England. Deep-sea and salmon fishing thrive. The Eire state rlys. serve the county. Wexford is the county town; New Ross, Enniscorthy, and Rosslare are other places. Area, 908 sq. m. Pop. 91,704.

Wexford. Borough, seaport, and co. town of Wexford, Eire. It is situated on a hill above the estuary of the Slaney, with a harbour covering 14,000 acres, the shallowness and bar of which, however, led to the construction of a new harbour at Rosslare (*q.v.*), with which Wexford is connected by rly. The industries include herring, oyster, and salmon fisheries; shipbuilding; distilling and brewing; lime and cement works; and iron foundries.

Founded in the 9th century, and a Danish settlement until 1169, Wexford was a residence of Strongbow. Cromwell laid it waste in 1649, but several of its old towers remain. Other notable features are the ruins of the 12th century Selskar abbey, or priory of SS. Peter and Paul, and ruins of S. Mary's, a priory of the Knights Hospitallers. At nearby Carrick the Anglo-Normans built their earliest castle. In 1169 a treaty was signed at Wexford between these invaders and the Gaelic nobility. Pop. 12,308. *Consult* History of Wexford, P. H. Hore, 1906.

Wexford arms

Wey. River of Hants and Surrey, England. It rises near Alton and, entering Surrey, cuts through the hills near Guildford, and flows mainly N. until it joins the Thames near Weybridge. The chief places on its banks are Guildford and Woking. Its length is 35 m.; its main tributaries are the Tillingbourne and other Surrey streams. The Wey is also the name of a stream in Dorset which rises near Upwey and falls into the English Channel at Weymouth.

Weybridge. Part of the urban dist. of Walton and Weybridge, Surrey, England. It stands on the Wey, near its union with the Thames, and is 19 m. S.W. from London by rly. Louis Philippe was buried in the R.C. chapel of S. Carlo Borromeo, as were other members of his family. S. James, the chief church, contains a memorial by Chantrey to the duchess of York. In Portmore Park, a name which survives in that of a district, stood Ham House, given by James II to his mistress, Catherine Sedley, who married Lord Portmore. St. George's Hill, on which is a large prehistoric camp, is a tract of pine forest and heather open to the public. On it is a golf course. Weybridge has also a common. Pop. est. 8,100. Near Weybridge are Brooklands (*q.v.*) and Oatlands (*q.v.*).

Weyburn. Town of Saskatchewan, Canada. It lies 73 m. S.E. of Regina, on the C.P.R. and the C.N.R. The centre of a thriving agricultural district, it has six grain elevators, a flour mill, creameries, bottling works, and a brick and tile factory. Pop. 6,119.

Weygand, MAXIME (b. 1867). Belgian-born French soldier. Born at Brussels, Jan. 12, 1867, he was educated at St. Cyr and commissioned in the French cavalry in 1888. He had an uneventful career in the colonial army until Sept., 1914, when he was appointed chief of staff to Foch. Having fought near Ypres, in Artois, and on the Somme, early in 1917 he was French representative on the inter-Allied general staff, but rejoined Foch next year and was responsible for some brilliant staff work in critical operations.

In 1920 Weygand went to Poland to reorganize the army, which under his leadership invaded Russia and defeated the Russians. In 1922 he was appointed to the French supreme war council. High commissioner in Syria, 1923-24, he became chief of the general staff in 1930, and president of the supreme war council next

year. A biography of Turenne earned election to the Academy in 1931. Relinquishing his post as

Maxime Weygand, French soldier

c.-in-c. in 1935, he was living in retirement at the outbreak of the Second Great War.

Upon Gamelin's failure to halt the German invasion, Weygand was recalled on May 19, 1940, to the supreme command. His efforts to hold the German advance and form a defence line proved abortive, one reason being his ideological outlook; his principal concern was to conserve what remained of the army and so maintain order, rather than continue hostilities with the risk of a popular revolt. After the surrender, Weygand became minister of defence in Pétain's govt., and used his influence in N. Africa to discourage colonial resistance to Germany. He put what he sincerely considered to be French interests first, protesting to the Nazis when they infringed the terms of the armistice. As c.-in-c. and high commissioner for N. Africa, he agreed, through distrust of Great Britain, to fight in Syria when the U.K. and Free French forces took action there. In July, 1941, Weygand became gov.-gen. of Algeria, but was subordinated to Darlan, and on Nov. 20 the Germans had him dismissed. Retiring to unoccupied France, he was arrested by the Germans when they overran the country, 1942, and interned in Königstein, Saxony, later in Oranienburg prison, Tirol, until liberated by U.S. troops May 6, 1945.

By his countrymen Weygand was arrested on charges of intelligence with the enemy; sequestration of his property was ordered, July 3, but age and poor health prevented his being brought to trial. In 1948 the national assembly rejected a proposal to prosecute him for endangering the external security of the state, and quashed the sentence of infamy to which he was automatically liable as a former member of the Vichy govt. *See* France: Second Great War. *Consult* The Role of W. (conversations with his son, J. Weygand), Eng. trans. 1948. *Pron.* Vay-gon.

Weyman, STANLEY JOHN (1855-1928). British novelist. Born at Ludlow, Aug. 7, 1855, he

was educated at Shrewsbury and Christ Church, Oxford. In 1881 he became a barrister. In the novel

he achieved his first great success with *A Gentleman of France*, 1893, a vivid and attractive historical romance. This was followed by stories which attained a wide vogue. Among them were *Under the Red Robe*, 1894; *Memoirs of a Minister of France*, 1895; *The Red Cockade*, 1895; *The Castle Inn*, 1898; *Count Hannibal*, 1901; *The Abbess of Vlaye*, 1904; *Starvecrow Farm*, 1905; *The Wild Geese*, 1908. Some of his novels, e.g. *Under the Red Robe*, *Count Hannibal*, were successfully dramatised. After a long silence Weyman in 1919 published *The Great House*; and *Ovington's Bank* appeared serially in *The Cornhill* during 1921-22. Weyman died April 12, 1928.

Weymouth arms

Weymouth. Mun. bor. and seaside resort of Dorset, England; in full, Weymouth and Melcombe Regis. Situated on the Wey, 8 m. S. of Dorchester, it has rly. connexion with London. Its popularity as a holiday resort dates from the time of George III, who frequently resided in Gloucester House. Bathing machines were first in regular use here. The parish church of S. Mary, rebuilt in 1817, contains a fine altar-piece by Thornhill, who was M.P. for the bor. The port is a centre of coastal traffic and has regular passenger and goods service with the Channel Islands.

The earliest mention of Weymouth is in a document dated 938, and there is still in existence a charter of 1252. In 1280 Edward I settled Melcombe Regis on his queen. The Black Death first reached England here. The two places were

incorporated in 1571, when Elizabeth granted a charter of union. During the Civil War the district was the scene of much fighting and the town changed hands several times, suffering considerably in the process. From the time of Edward II until 1832 Weymouth and Melcombe Regis each returned two M.P.'s; until 1885 each had one; the town is now included in S. Dorset. It figures as Budmouth in Hardy's novels. Pop. 35,470.

Whale (*Cetacea*). Order of large mammals of fish-like form adapted to life in the oceans. The hairy coat of the terrestrial mammals and the seals has disappeared, and is represented only by a few hairs about the lips, most evident in the young. To make up for this defect in maintaining the high temp. of the blood, there is a thick layer of fat (blubber) under the smooth skin. There is no neck separating head and body, no external ears, and the nostrils (blow-holes) open on the upper surface. The fore-limbs are converted into paddles, and the hind-limbs are absent altogether, or represented by a few vestigial bones in the skeleton. The body ends behind in a large horizontal expansion of the skin and blubber that constitutes a tail fin.

Weymouth, Dorset. The Esplanade, looking east

The order is divided into two groups: the toothed whales (*Odonoceti*) and the whalebone whales (*Mystacoceti*); the former including the sperm-whale, dolphins, porpoises, and narwhal, the latter comprising right whales and rorquals. All whales breathe atmospheric air, for which they have to come to the surface at intervals. Their food is chiefly molluscs and small crustaceans.

The largest and most important of the toothed whales is the Cachalot or sperm-whale (*Physeter macrocephalus*). This creature yields the most valuable whale-oils, in addition to spermaceti and ambergris. Another toothed whale, the bottle-nosed whale (*Hyperodon rostratus*), occasionally visits British waters. The white whale (*Delphinaptera leucas*), 12 ft. to 14 ft. in length, is another gregarious species, occasionally caught off Great Britain but found chiefly off Labrador and Canada. The

skins of these two are converted into porpoise-hide.

Of the whalebone or right whales the most important formerly were the Greenland whale (*Balaena mysticetus*), and the Biscayan whale or Nordkaper (*B. glacialis*), the catching of which by the Basques is said to date from the 9th century. The Nordkaper still flourished in the 16th century, but almost died out in little more than another century; a few are still caught in the N. Atlantic. The Greenland whale is now scarcely more plentiful than the Nordkaper; but in the 17th and 18th cents.

Whale. Top, sperm whale, which yields the most valuable of the whale oils. Below, Greenland right whale, which furnishes whalebone

when its long plates of baleen or whalebone were in great demand for shaping and stiffening ladies' dresses, and the oil was used for street illumination, it existed in great numbers near the edge of the polar ice, and was overhunted. See *Ambergris*; *Beluga*; *Bottle-Nosed Whale*; *Cachalot*; *Ca'ing*; *Cetacea*; *Dolphin*; *Fin Whale*; *Grampus*; *Harpoon*; *Hump-back Whale*; *Narwhal*; *Porpoise*; *Right Whale*; *Rorqual*; *Spermaceti*. Consult *Guide to the Whales*, British Museum, 1922.

Whale, JOHN SELDON (b. 1896). British divine. Born Dec. 19, 1896, he went to Caterham school and S. Catherine's and Mansfield Colleges, Oxford. A Congregational minister in Manchester from 1925, he went back to Oxford in 1929 to teach ecclesiastical history, then in 1933 moved to Cambridge as head of Cheshunt College. In 1944 he became headmaster at Mill Hill. For the season 1942-43 he was moderator of the Free Church Federal Council. Notable in the pulpit and the press alike, he published *The Christian Answer to the Problem of Evil*, 1936; *This Christian Faith*, 1938; *Facing the Facts*, 1940.

Whale Island. Island on the E. side of Portsmouth Harbour. Thereon is the school of naval gunnery. See *Portsmouth*.

Whaling. The industry of catching and killing whales. It is now directed chiefly to the production of whale oil, and concentrates on the two largest species, the blue whale and the fin whale. Nearly 80 p.c. of the catch is made in the Antarctic during summer, the actual dates being fixed by international agreement. At this period whales congregate in the polar regions and feed. During their travels in milder regions they appear to eat little, if at all, and arrive in a very lean condition; so the killing season is adjusted to insure that they are in prime condition, yielding the maximum amount of oil. As a further precaution against over-killing, the minimum length (70 ft. for blue whales, 55 ft. for fin whales) and an annual quota are fixed. The killing power of a whaling fleet is so great that without precautions there would be serious danger of exterminating the species. The industry is regulated by an international whaling convention, as well as by British Acts of parliament.

The operational unit is a "factory ship" attended by up to ten catchers. A vessel of about

20,000 tons is fitted with a slipway in the stern up which the carcass can be drawn to the open deck, where the blubber is removed (flensing)—about 47 p.c. of the oil comes from blubber—and the meat and bones are cut up and boiled down to extract the oil. The liver is treated separately, its oil being specially valuable for high vitamin content. Whale oil is used in margarine, cooking fats, and soap. The meat, dehydrated, forms the basis of useful cattle foods, and selected portions are excellent for human consumption. The necessary plant for all these operations is housed in the ship. Such a ship can dispose of a 100-ton whale in less than an hour. During the 1946-47 season one vessel dealt with 2,200 whales, producing 37,000 tons of oil. The industry had not then recovered from the effect of the Second Great War, which put the whaling fleets virtually out of action; in 1937, 54,835 whales were killed and 536,000 tons of oil produced.

Though whales reach maturity in about three years, the rate of reproduction is low, probably not more than two calves in three years. Inspection, statistics, and research work, chiefly by the British Discovery expeditions in the Antarctic, and by the Norwegians in the Arctic, indicate that the rate of killing is still too high for the maintenance of stock. Even the rest period enforced by war did not appear to have completely restored the numbers of blue whales. F. Bullen's *Voyage of the Cachalot*, and H. Melville's *Moby Dick*, though fictional in form, give vivid and authentic accounts of whaling in the 1880s. Consult also *Whales and Modern Whaling*, J. T. Jenkins, new ed. 1945.

Whalley, EDWARD. An English regicide. Cousin to Oliver Cromwell, he entered the parliamentary army and was promoted major in Cromwell's horse, 1643, fighting at Marston Moor, Naseby, and Oxford. Prominent in all the great events of the Rebellion, he was in charge of Charles I at Hampton Court, was a member of the commission which tried him, and signed the death warrant. Distinguishing himself at Dunbar and Worcester, Whalley was one of Cromwell's major-generals and a member of the new house of lords. After the Restoration, a price being placed on his head, he fled to America.

Whampoa. Seaport of China, in Kwangtung prov. Situated on the island of Whampoa in the

estuary of the Si-kiang, it is the outport of Canton, where large vessels discharge cargo.

Whangee Cane (*Phyllostachys nigra*). Bamboo-like perennial of the family Gramineae. It is a native of China and Japan. Its slender, almost solid culms may be from 4 to 25 ft. long, and are exported for making into walking canes, chairs, etc.

Wharfe. River of the West Riding of Yorks, England. Rising on the S.E. slopes of Carnfell, 7 m. S. of Hawes, it flows through Langstrothdale and Wharfedale, past Grassington, Linton, Bolton Abbey, and Addingham to Ilkley. It bends E. to Otley, Harewood, and Wetherby, and then flows S.E. to Cawood, where it joins the Ouse. Its total length is 60 m. Wharfedale, both upper and lower, is considered one of the most beautiful of all Yorkshire dales, notable spots being Kinsey Crag and the Strid, Bolton Woods, where the river flows with great force between rocks only a few feet apart. From Ilkley as far as Wetherby the dale is dominated to the N. by Almscliff crag.

Wharnccliffe, EARL OF. British title borne by the family of Montagu-Stuart-Wortley-Mackenzie. James Stuart, a younger son of the 3rd earl of Bute, inherited from his mother the barony of Mountstuart and the valuable estates of the Wortley family in Yorks. His son, James Archibald Stuart-Wortley (1776-1845), was an M.P., 1798-1826; at first a strong Tory, he turned round to support the Reform Bill of 1832, and became one of the chief followers of Peel. In 1826 he was made Baron Wharnccliffe of Wortley, and he was lord privy seal in 1834, and lord president of the council, 1841-45. He died Dec. 19, 1845. His grandson Edward, 3rd baron (1827-99), was made an earl in 1876. Chairman of the Manchester, Sheffield, and Lincolnshire rly., he gave his name to the former Wharnccliffe Rooms, Marylebone. In 1926 the title came to Archibald (b. April 17, 1892), 3rd earl. An eldest son is called Viscount Carlton, and the seat is Wortley Hall, Sheffield.

Wharton, BARON. English title held by the family of Wharton from 1543 to 1731. The first holder

1st Baron Wharnccliffe, British politician. After H. P. Briggs

Philip, 1st Duke
of Wharton

was Thomas Wharton (d. 1568), a Westmorland squire who served the Tudors on the Scottish borders. His descendant, Philip, 4th baron (1613-96), was the father of the marquess of Wharton (*v.i.*). The marquess was succeeded by his son Philip (1698-1731), one of the most dissolute men of his time. In 1718 he was made duke of Wharton, but, having squandered his fortune, travelled abroad. Attaching himself to the exiled Stuarts, he joined the Spaniards in the siege of Gibraltar, 1727, and by the house of lords was declared a traitor and an outlaw. He died May 31, 1731, when his titles became extinct. In 1916 the barony was called out of abeyance for Charles Kemeys-Tynte (1876-1934), who was succeeded by his son, Charles (b. Jan. 12, 1908).

Wharton, THOMAS WHARTON, 1ST MARQUESS OF (1648-1715). English statesman. Son of the

Thomas, 1st Marquess
of Wharton

4th Baron Wharton, a strict Puritan, he was born at Woburn, and joined the court of Charles II. A staunch Whig, he entered the house of commons in 1673, and opposed the policy of James II. He boasted that the song Lilliburlero (*q.v.*), which he wrote in 1687, had "sung a king out of three kingdoms." Joining William III at Exeter, he proved one of his sturdiest political henchmen. Wharton succeeded to the peerage in 1696, was created an earl in 1706, and made lord-lieutenant of Ireland in 1708. His two years' administration occasioned Swift's *Short Character of the Earl of Wharton*, a fierce satire. Ardent advocacy of the Protestant succession recommended him to George I, upon whose accession in 1714 he became lord privy seal and marquess of Wharton and Malmesbury. He died April 12, 1715.

Wharton, EDITH NEWBOLD JONES (1862-1937). An American novelist. Daughter of G. F. Jones, she was born in New York, and married Edward Wharton in 1885. Her first important work was *The Greater Inclination*, 1899, and she

produced many novels and short stories, all admirably written and characterised by a rare feeling for intricacies of motive, character, and emotion. They gained her membership of the American Academy. Titles include

Crucial Instances, 1901; *The Valley of Decision*, 1902; *The House of Mirth*, 1905; *Madame de Treymes*, 1907; *Ethan Frome*, 1911; *The Custom of the Country*, 1913; *Xingu*, 1916; *The Marne*, 1918; *The Age of Innocence*, 1920; *Twilight Sleep*, 1927; *Hudson River Bracketed*, 1929. *Reminiscences, A Backward Glance*, came out in 1934. Edith Wharton died Aug. 11, 1937, at her home near Paris. *Consult* Portrait of E.W., P. Lubbock, 1947.

Whateley, DAME LESLIE VIOLET LUCY EVELYN MARY. Chief controller of the A.T.S., 1943-46. After a convent education at St. Leonards and Cavendish Square, London, she went into private secretarial work, then took up social welfare. In 1939 she married Sqn.-Ldr. H. R. Whateley. She succeeded Jean Knox (Lady Swaythling) as head of the A.T.S. The D.B.E. was conferred in 1946, as was the American Order of Merit. *See* Auxiliary Territorial Service illus., p. 810.

Whately, RICHARD (1787-1863). British divine. Born in London, Feb. 1, 1787, he was educated at

Richard Whately,
British divine
After C. Grey

Oriel College, Oxford, of which he became a fellow, and in 1814 was ordained. In 1825, after two years as a vicar in Suffolk, he was made principal of St. Alban Hall, Oxford, and in 1829 professor of political economy. Archbishop of Dublin, 1831, he there remained until his death, Oct. 8, 1863. Whately's first publication was *Historic Doubts Relative to Napoleon Bonaparte*, a logical joke intended as a burlesque of German methods. His fame rests upon his *Manual of Logic*, which, although violently attacked in *The Edinburgh Review*, marks a distinct advance in the treatment of the subject. He exerted himself to

reconcile Ireland to English government, and to heal the breach between Protestant and Catholic. *Consult* Life and Correspondence, E. J. Whately, 1866.

What Every Woman Knows. Comedy by Barrie. It was produced Sept. 3, 1908, at the Duke of York's Theatre, London, where it had a run of 384 performances. Gerald du Maurier, Lillah McCarthy, and Hilda Trevelyan played the principal parts. The story deals with the marriage of a young man who reaches success in a political career without knowing how much he owes to his wife.

Wheat. Cereal crop, forming the principal food of mankind, especially Europeans and peoples of European origin. It is a grass belonging to the family Gramineae and the genus *Triticum*. Its origin is unknown. Excavations in lake dwellings show that the Swiss of Neolithic times cultivated at least four distinct varieties. In China wheat was grown 3,000 years before the Christian era; while it was also a principal crop in ancient Egypt.

The wheat plant normally consists of several stems or stalks each bearing roots, two rows of leaf blades, and an ear or spike at the tip; from each spike flowers and, later, kernels are formed. While growing on the plant the kernels or grains are enclosed in scale-like coverings called glumes or chaff. The wheat kernel consists of three principal parts, the coatings, the embryo, and the starchy interior or endosperm. The last, which is the part from which flour is milled, is about 76 p.c. of the whole weight of the grain. The coatings which, when ground, form the bran and pollards of commerce are about 10 p.c. of the weight. The moisture content varies greatly, but should not be above 15 p.c. of well harvested grain.

Wheat grows to a height of 2 to 5 ft., according to variety, climatic conditions, etc., and its roots may penetrate the soil to a depth of 7 ft. or more. Each seed gives rise to a single shoot, but this may be increased by tillering. Wheat is normally grown closely in rows, but when planted at wider intervals of a foot or more tillering may give rise to 50 or more ears.

More than a thousand varieties of wheat are known throughout the world, and the number increases through the activities of plant breeders and seed growers. The principal varieties in cultiva-

tion are: (1) small spelt, a single-grained wheat (*Triticum monococcum*); (2) emmer (*T. dicoccum*), which has a small, hard, reddish grain and is grown on the dry lands of the U.S.S.R.; (3) common spelt (*T. spelta*), with lax ears and chaff-covered grain; (4) macaroni (*T. durum*), bearded varieties with long narrow grain of flinty texture; (5) rivet wheat (*T. turgidum*), usually bearded, with grain which is large and plump and bears a hump on the

Working about the same time on the same plan, Col. Hallett, another experimenter, produced Hallett's red wheat. He selected those ears which produced most grain and by intensive selection increased the yield.

By cross-fertilisation a stock of wheat can be bred which combines the best characteristics of its various parent stocks. The amazing improvement in wheats is due to scientific plant breeders, such as Gartons of Warrington.

Garton Brothers began their experiments about 1890, and since then they and others—notably Biffen and Engledow of Cambridge and Percival of Reading—have bred new varieties which show very great improvement in such characters as yielding capacity,

purposes on any variety of English wheat known at that time. Yeoman has a light red grain and a very stiff straw so that it stands well even under heavy storms. In 1935 Holdfast, a white grain wheat, was introduced by Engledow as a cross between Yeoman and White Fife. For milling and bread-making purposes good samples of Holdfast equal the highest quality wheats grown in Canada and elsewhere.

Millers class wheats as "strong" or "weak." A strong wheat gives a flour capable of producing larger and more shapely loaves than that derived from a weak wheat. As a rule, the wheats sown in the spring under conditions of high sunshine produce the stronger flour. Thus, Canadian wheats are stronger than most of the autumn-sown varieties of British wheat.

Diseases of Wheat

The principal diseases from which wheat suffers are bunt or stinking smut, loose or summer smut, and yellow rust. The

attacks of bunt or stinking smut fungus can be reduced and almost nullified by dusting grain before sowing with an organic compound of mercury. Loose smut and rust are uncontrollable except by the use of varieties bred to resist them. Application of an excess of nitrate of soda or of sulphate of ammonia appears to increase damage by rust.

back; (6) club wheat (*T. compactum*), a variety with short stiff straw which usually remains erect when ripe, and does not easily shed its grain: it is particularly suited to warm dry climates; (7) common wheat (*T. vulgare*), which comprises the vast majority of wheats grown for bread-making, and may be subdivided into soft, medium, and hard wheats, according to their milling qualities, or into red and white wheats according to the colour of the grain.

The geographical range of wheat is very wide: for instance, wheats such as Omega have reached maturity in areas less than 200 m. S. of the Arctic Circle. At the other extreme, wheat thrives in S. Brazil, Cuba, in many parts of the Indian sub-continent, and in Rhodesia.

Up to the end of the 18th century the wheat grown in the U.K. did not differ greatly from some of the types raised in ancient Egypt, 4,000 years earlier. The first great improvement was due to a Scottish farmer, Patrick Shirreff, who in 1819 noticed a wheat plant in one of his fields which branched in an uncommon fashion. He marked it and found that it had produced 63 ears holding 2,500 kernels. Saving the seed, he sowed it and multiplied it under fertile soil conditions, and introduced it as the new variety, Munegoswells.

Wheat. Inflorescence and grain of red-chaffed varieties: 1. Fylgia. 2. Little Joss. 3. Steadfast. White-chaffed varieties: 4. Holdfast. 5. Yeoman. 6. Juliana

From Description of Recommended Varieties of Wheat & Barley, F. Earnshaw, M.A., Ph.D. (N.I.A.B.)

stiffness of straw, resistance to disease, and milling quality of grain. To Biffen the world owes the famous Little Joss wheat, the result of a cross between Squareheads Master and Ghirka. This variety was bred principally to resist yellow rust. The yield of Little Joss on land of moderate fertility greatly exceeds that of older varieties. It has inherited the yielding capacity of Squareheads Master together with the disease-resisting properties of its other parent, Ghirka.

In 1916 Yeoman, a cross between Red Fife and Cambridge Browick, was pronounced by the association of British millers to be an improvement for milling

The average yield per acre of wheat in Great Britain rose from 24 bushels per acre in 1771 to about 32 bushels per acre in 1905; from 1938 to 1946 it averaged over 34 bushels per acre. The acreage, 3,688,357 acres in 1869, fell to 1,246,721 in 1931, rose in 1943 to 3,450,528, falling again after the Second Great War. In India and Australia the yield does not exceed 12 bushels to the acre.

The amount of wheat grown throughout the world in 1948 (excluding Russian territories and China) was estimated at 3,850 million bushels (nearly 110 million tons), compared with a total yield of 4,088 million bushels in 1913. About 44 p.c. was grown

in N. America, and 36 p.c. in W. and S. Europe; the other chief producers were India, Argentina, and Australia. During 1948 the U.S.A. proposed to export at least 450 million bushels, and Canada 240 million bushels. When Europe is in normal agricultural condition she produces more wheat than N. America. Before 1939 the U.K. imported annually about $5\frac{1}{2}$ million tons of wheat grains and flour, which was three-quarters of the amount consumed. In war the quantity imported ranged from 6·38 million tons in 1940 to 3·59 million tons in 1944; home production varying from 1·6 million tons in 1940 to 3·45 million tons in 1943. It was planned to produce 2·5 million tons in 1949. See Agriculture; Bread; Crops; Plants, colour plate; Rust Fungi; Smut.

Wheatear (*Oenanthe oenanthe*). British migratory bird. It arrives about the beginning of March. It is six inches long, and has grey plumage on the upper parts, black on the wings, black and white on the tail, and white on the breast and under parts. In the autumn the plumage assumes a reddish-brown hue. The wheatear is distributed over the whole of Great Britain, especially on waste land. It feeds chiefly on insects.

Wheatear, an early migrant to Great Britain

W. S. Berridge, F.Z.S.

Wheatley, DENNIS YATES (b. 1897). British writer of thrillers. He was born Jan. 8, 1897, and after education in H.M.S. Worcester and in Germany, helped in his father's wine business; this he owned 1926-31, then sold it to start writing. Beginning with *The Forbidden Territory*, he poured out tales and short stories of murder, espionage, and adventure in tropic seas; familiar titles were *The Devil*

Dennis Wheatley, British writer

Rides Out; *The Masacre* (with J. G. Links); *Faked Passports*; *Gunmen, Gallants, and Ghosts*. Wheatley also wrote studies of Charles II (Old Rowley), 1933; Marshal Voroshilov (Red Eagle), 1937; *The Shadow of Tyburn Tree*, 1948. During the Second Great War he worked for

the war cabinet and rose to wing commander. He invented the games *Invasion* and *Blockade*.

Wheatley, FRANCIS (1747-1801). British artist. Born in London, son of a master-tailor, he first exhibited at the R.A. in 1778, was elected associate 1790, and R.A. 1791. He died June 28, 1801. Wheatley is best known for his popular series *The Cries of London*, though he also executed portraits and landscapes. See London, Cries of.

Francis Wheatley, British artist
Self-portrait

though he also executed portraits and landscapes. See London, Cries of.

Wheatley, HENRY BENJAMIN (1838-1917). British antiquary, born at Chelsea, May 2, 1838. He made a special study of London topography and of the life and work of Pepys. His chief books include an edition of Pepys's *Diary*, 1894-99, the fullest so far published; *Samuel Pepys and the World He Lived In*, 1880; *Pepysiana*, 1899; *London Past and Present*, 1891, a revision with additions of the work of Allan Cunningham; *The Story of London*, 1904; *Hogarth's London*, 1909. Wheatley edited *Jonson's Every Man in His Humour*, 1877, and *Shakespeare's Merry Wives of Windsor*, 1886. He died Apr. 30, 1917.

Wheatley, JOHN (1869-1930). British politician. Of Irish birth, he attended village schools in Lankashire, and from 12 to 22 was working in coal mines. In the publishing business at Glasgow, he became prominent on the city corporation as leader of the Labour group. President of the Scottish Labour housing association, he was elected M.P. for Shettleston in 1922, holding the seat until his death on May 12, 1930. Wheatley was minister of Health in MacDonald's administration of 1924, but his violent criticism of a policy he believed too moderate led to his exclusion from the second Labour cabinet. Another John Wheatley (b. Jan. 17, 1908), appointed lord advocate for Scotland in 1947, was his nephew.

John Wheatley, British politician

Wheatstone, SIR CHARLES (1802-75). British electrician and

inventor. Born at Gloucester, he became a musical instrument maker in London, inventing the concertina

(q.v.), and early took an interest in science, contributing important papers on light and optics to the *Transactions of the Royal Society*. Professor of experimental physics at King's College, London, 1834, his paper on the *Prismatic Analysis of Electric Light* was read to the British Association in 1835. He carried out experiments on the transmission of electric signals over wires, developing with Cooke the type-printing telegraph, magneto-electric dial telegraph, and automatic transmitting and receiving instruments. Wheatstone invented the rheostat, the stereoscope, synchronised electrical clocks, and perfected the *Wheatstone Bridge* (v.i.), 1847, based on an invention made in 1835 by S. H. Christie. He was knighted in 1868, and died in Paris Oct. 19, 1875. His Scientific Papers were collected, 1879. See Telegraph.

Wheatstone Bridge. Device for measuring electrical resistances, in terms of one known variable resistance and the ratio of two others. The diagram shows a particular form of network used in the "post office box." This comprises two resistances, R_1 and R_2 , made up of coils which can be short-circuited by brass plugs so as to vary their ratio, usually in terms of ten, i.e. $\frac{1}{10}$, 1, 10, etc.; and a third variable resistance R_3 . X is the unknown resistance to be measured, G is a galvanometer, B a battery, and K_1 and K_2 are two contact keys for "making" various parts of the electrical circuit.

Wheatstone Bridge. Diagram of the device. See text

A suitable value for R_1/R_2 having been ascertained, R_3 is varied until on pressing keys K_1 and K_2 , in that order, no deflection of the galvanometer is obtained. It may be shown that for this condition of balance:

$$X = (R_2/R_1)R_3$$

In the metre bridge the arms ab, bc, are replaced by a single

Sir C. Wheatstone, British inventor

wire stretched on a board, usually one metre long and the position of the junction *b* may be varied by the movement of a suitable contact along the wire. Assuming the latter to be uniform, the ratio R_2/R_1 will now be given by the ratio of the length *bc* to *ab*.

Wheel. Disk or circular framework capable of rotating on an axle. The road wheel of a vehicle is a development of the roller placed under a heavy stone or similar load to lessen friction when the load is dragged. Early wheels, and some still used in undeveloped countries, are solid wooden disks of usually small diam. Later the framed wheel came into use, with the outer rim held to the hub by spokes, the whole being strongly mortised and tenoned together. The work of the wheelwright called for a high degree of skill and science, in fashioning such different types as the wheel for the heavy dray, and the extremely light but strong one for the gentleman's carriage after roads had been made firm and smooth by Telford and Macadam. For some time after motor vehicles made their appearance, coach builders continued to make old-type wheels, but gradually the wire or disk wheel came into vogue, of much smaller diam. than carriage wheels, and made of metal.

In machinery the wheel for large mechanisms was commonly made of wood; the outer rim was built up on a radiating framework which took the place of the spokes of the wagon wheel, since the radial thrust was less. Into the usually double rim were fixed separate cogs, also wooden. Smaller wheels, as used in turret clocks and winches, were generally cast in one piece, with the teeth moulded in. When large wheels were made in cast iron, it was common for the cogs still to be inserted separately; the 15-ft. flywheel of Boulton and Watt's engine of 1788 had the teeth inserted into mortises in the rim, the wheel, besides serving as a storer of momentum, transmitting motion to machinery. In Trevithick's high-pressure engine of 1811, the flywheel, 10 ft. in diam., had a grooved rim for a driving rope. *See Bicycle; Flywheel; Gear; Tire; Wheel and Axle.*

Wheel, BREAKING ON THE. Old form of capital punishment. The victim was tied spread-eagled either to a wheel or to a cross, and his limbs were successively broken by blows from an iron bar. He was either left to die after the punishment, or, more mercifully, was

given the *coup de grâce* by a blow on the stomach or chest. The punishment was prevalent in medieval Europe, but was abolished in most countries by the beginning of the 19th century.

Wheel and Axle. One of the mechanical powers, a modification of the lever. It consists of a cylindrical axis, to which is fixed a wheel with a grooved rim. A rope passes round the axle, and another round the rim of the wheel. The former is attached to the weight being raised, and the second rope is used for transmitting the power. The relation between *P*, the power, and *W*, the weight, is given by the equation $P \times R = W \times r$, where *R* and *r* are the radii of the wheel and axle respectively. The capstan and windlass are common examples of practical use.

Wheeler, BURTON KENDALL (b. 1882). American politician. Born at Hudson, Mass., Feb. 27, 1882, he passed through the university of Michigan law school, and became an attorney in 1906. A Democrat, he was a member of the Montana house of representatives 1911-13, and district attorney for the state 1913-18. Elected to the U.S. senate in 1922, he was chosen for three more terms, and ran for the vice-presidency in 1924. An isolationist, he toured many states in 1940-41 to attack Roosevelt's foreign policy, but changed his attitude after the Japanese attack on Pearl Harbour, to advocate war against the aggressor.

Wheeler, CHARLES THOMAS (b. 1892). British sculptor. Born at Wolverhampton, March 14, 1892, he studied at S. Kensington and first exhibited at Burlington House in 1914. His principal works were on a large scale, e.g. memorials of the First Great War at

Neuve Chapelle (Indian), and in the cloisters at Winchester College; and decorative reliefs and figures on the Bank of England, India House, S. Africa House, Church House, and other public buildings in London. His bust of the infant Christ was purchased for the nation in 1924. Wheeler became A.R.A. in 1934, R.A. in 1940, and in 1944 president of the Royal Society of British Sculptors. *See Sculpture.*

Wheeler, JOSEPH (1836-1906). American soldier. Born at Augusta, Ga., he was educated at West

Point, and entered the cavalry. On the outbreak of the Civil War he joined the Confederates and fought through the whole of the war, being present at Shiloh, Chattanooga, Chickamauga, and other battles. In the closing stages he led the cavalry division of Johnston's army. Later he spent many years as a lawyer and a cotton planter, but in the Spanish-American War of 1898 he held a command in Cuba, and in 1899-1900 he was given one in the Philippines. He died Jan. 25, 1906.

Wheeler, SCHUYLER SKAATS (1860-1923). American electrical engineer. Born in New York, May 17, 1860, and educated at Columbia, he became an assistant to Edison, 1883, and in 1889 was president of a company manufacturing electrical equipment. Wheeler invented the electric fan, developed the application of electricity for driving tools, and devised improvements in electric motors. He was president of the American Institute of Electrical Engineers, 1905-06. He died April 20, 1923.

Wheeler, WILLIAM ALMON (1819-87). American statesman, born at Malone, Franklin co., N.Y., June 30, 1819. He was called to the bar in 1845, and during 1861-63 and 1869-77 was Republican member of congress. He is known as the author of the Wheeler compromise for settling political disputes in Louisiana. Vice-president of the U.S.A., 1877-81, he died at Malone, Jan. 4, 1887.

Wheeling. City of West Virginia, U.S.A., the co. seat of Ohio co. Third largest city of the state, it stands on the Ohio river, 65 m. S.W. of Pittsburgh, and is served by the Baltimore and Ohio and other rlys. The first town established on the Ohio, Wheeling was settled in 1769, incorporated in 1806, and became a city in 1836. It was the capital of the state during 1863-70 and 1875-85. A large transit trade was interrupted in 1936 when the river rose 20 ft. above flood level, submerging buildings. Steel, glass, textile, and clay products are manufactured, as is tobacco. S. Joseph's R.C. cathedral is a massive and richly decorated Romanesque building. Pop. 61,099.

Wheel Lock. Mechanical device for firing early forms of guns without a slow match. One of the earliest attempts at a mechanical action of this nature is found in the Monk's gun, a steel file being arranged so that it can be pulled under a piece of flint held in a

Charles Wheeler,
British sculptor

strong spring near the flash pan, the resulting sparks igniting the priming. The wheel lock proper was invented at Nuremberg in 1515. The cock is pivoted forward of the lock, and the jaws, which point towards the butt, hold a piece of pyrites, a spring tending to force the latter on to the base of the flash pan, through the bottom of which projects the serrated edge of a steel disk. The latter is connected by a short link of chain to a drum containing a spring, which can be wound up with a key like a clock. When fully wound, a stud on the trigger drops into a hole in the drum, locking the mechanism. The wheel lock made it possible for a steady aim to be taken, an impossibility with the older guns, and the weapons were made lighter, while it was a marked improvement to be able to carry a firearm ready for use without a burning match. *See Matchlock.*

Wheelwrights' Company. A London city livery company. Dating from the 17th cent., it was granted a charter by Charles II in 1670, and in recent years has cooperated with the Carpenters' Company (*q.v.*) in promoting technical education in the craft. The office until the Second Great War was situated at the Guildhall, E.C.2.

Whelk (*Buccinum undatum*). Large marine snail. It has a thick, stony shell of a few swollen whorls

Whelk. Edible sea snail showing whorled shell

with curved, broad ribs crossed by spiral lines of growth. The animal has a broad, muscular foot, with a horny operculum behind for closing the shell. The head bears a pair of pointed tentacles with eyes at their base, and the extensible muzzle is furnished with a lingual ribbon capable of boring holes through the hard shells of other molluscs. A fold of the mantle forms a long respiratory tube for which a special channel in the shell is provided. The whelk is carnivorous. There is a regular fishery, as whelks are useful for bait and for food. They are taken by the dredge, or by sinking

baskets containing carrion and weighted by stones. The eggs of the whelk are contained in little parchment-like capsules, a large number of the latter being united into a cluster and attached to rocks or shells. *See Mollusca.*

Whernside. Mountain of Yorkshire, England. One of the highest peaks of the Pennine range, it rises 2,414 ft. just where Yorks, Lancs, and Westmorland meet. Great Whernside (2,310 ft.) and Little Whernside are other Pennine mts., at the head of Nidderdale.

Wherry. Rowing boat with stem and stern the same shape, used by watermen for carrying passengers. The Norfolk wherry, formerly met with upon the Broads, was a fast sailing barge now obsolescent.

Whetstone. Residential dist. of Middlesex, England, on the Herts border. Once a hamlet of Friern Barnet, it has a tube rly. station, Totteridge and Whetstone, and bus and trolley bus connexions with N. and Cent. London. Another Whetstone is in Leics, 93 m. N.W. of London, with a rly. station.

Whewell, WILLIAM (1794-1866). British scholar. Born at Lancaster, May 24, 1794, the son of a carpenter, he was educated there and at Heversham, before going to Trinity College, Cambridge. Second wrangler in 1816, he became fellow and tutor of Trinity. During 1828-32 he was professor of mineralogy, and during 1838-55 of moral philosophy, while from 1841 he was master of Trinity. He died March 6, 1866.

W. Whewell, British scholar

Many stories are told of Whewell's intellect and learning. Of him Sydney Smith said "Science was his forte, omniscience his foible." Whewell's mathematical textbooks have been superseded, and his History of the Inductive Sciences is out of date, but they revealed his genius. Elements of Morality, 1845, classified human rights and virtues. During his tenure of the mastership he did much to revive the standard of education at Cambridge, and owing to his efforts the moral and natural sciences triposes were instituted. In philosophy he was influenced by Kant; his ethical standpoint was intuitionist. There are lives by I. Todhunter, 1876; and by Mrs. Stair Douglas, 1881. *Pron. Hewel.*

Whey (A.-S. *hwæg*). Pale yellow fluid, the residue of milk when the curd has been precipitated by rennet. Lactose, or milk sugar, is obtained from whey by evaporation. *See Cheese.*

Whickham. Urban dist. and town of Durham, England. It is situated 3 m. W.S.W. of Gateshead. The Norman church of S. Mary was restored in 1862, and contains some fine remains of the original building. The chief industries are concerned with engineering, electric power, soap works, and flour mills. Pop. 23,000.

Whiffing. Method of hand-line fishing popular on the coasts of Devon and Cornwall, where large quantities of mackerel are taken in this way. Whiffing is a form of trolling, a spinning bait of bright metal being attached to a line by a gut trace fitted with swivels. To this bait is affixed a small piece of the bright skin cut from the underside of a mackerel. As many as four lines are used at once from one boat, and when the fish are shoaling inshore they may be caught as fast as the lines can be hauled. Whiffing is usually practised under sail, but is sometimes successful from a row-boat. Other fish, such as pollack and bass, may occasionally be caught by whiffing.

Whig. Name used for a political party in England. It is an abbreviation of Whigamore, an opprobrious name of doubtful etymology. The term was originally applied to extreme Scottish Covenanters, especially those from S.W. Scotland. During the struggle over the passing of the Exclusion Bill (*q.v.*), which began in 1679, the term came to be applied, again opprobriously, to the advocates of the bill, who, broadly speaking, were the political descendants of the country party in the Civil War and the period immediately preceding. As with Roundheads and Cavaliers, a term which had at first been an epithet of derision was eventually adopted as a designation by the party itself.

The Revolution of 1688 established the Whigs on a sound foundation as the party which stood for opposition to encroachments by the crown, and for the Protestant succession. It was much strengthened by the accession of the Hanoverian dynasty in 1714, and thenceforward the Whig party enjoyed undisputed supremacy for some 60 years. Long enjoyment of power, however, made it reactionary and corrupt, and eventually it broke up into

factions. During the French Revolution Burke and many other Whigs became virtually Tories, while the more progressive elements headed by Fox assumed the title of New Whigs. These were the political fathers of the later Liberal party. *See* Liberal; Tory.

Whin. Name used in Scotland and Ireland for furze (*q.v.*). The whins on Scottish golf courses provide the best-known application of the term.

Whinchat (*Saxicola rubetra*). Small British migratory bird. The plumage is yellowish-brown on the

Whinchat. Hen of the small migratory bird that nests on the ground

W. S. Berridge, F.Z.S.

upper parts, white on the throat, yellowish-red on the breast, and yellowish-white below. The bird is common in hedgerows and among furze bushes, and builds its nest in a hollow under a tuft of grass. *See* Eggs colour plate; *Saxicola*.

Whin Sill. In geology, a large sheet-like body of dolerite occurring in Carboniferous rocks of Northumberland, Durham, Westmorland, and N. Yorks. It extends over 1,500 sq. m. and has a thickness up to 200 ft. Where it outcrops it forms prominent features and steep valley sides. Hadrian's Wall follows locally the line of one escarpment, and elsewhere the hard sheet of rock forms waterfalls, *e.g.* Cauldron Spout and High Force.

Whin Stone. Term embracing rocks of the basalt and dolerite groups, which are dark and relatively unaltered and are derived from either lava flows or dykes. It is often used by quarrymen for road stone.

Whip. In British politics, an official whose duty it is to see that the members of his party vote as required. He acts as the intermediary between the leaders and the rank and file, and helps to arrange the business of the assembly to which he belongs. In the houses of parliament each party

has whips who undertake these duties. Government whips are members of the ministry, the patronage secretary to the treasury being the chief whip, and the junior lords of the treasury and the officers of the household his assistants. Whips of parties in opposition are unpaid. Two whips act as tellers when divisions take place on party lines (*see* Division). The chief whip is also the guardian of the party funds, and with his assistants is responsible for keeping the party organization in good condition. Other administrative bodies have officials called whips, *e.g.* the L.C.C.

The term whip is also applied to messages circulated to members warning them to be in their places at a certain time on a particular day, the importance of the occasion being marked by the underlining of certain words, *e.g.* a three-line whip implies urgency, while a five-line whip has been used for debates of the utmost importance.

Whipcord. Stout cloth, usually of cotton or wool, in twill weaves, with the twill lines at a very steep angle to the weft, and showing pronounced ridges and intermediate furrows. A well-known example is officers' khaki riding breeches.

Whippet. Breed of dog produced by crossing the fox terrier with the greyhound and the Italian greyhound. It was admitted to the stud book as a distinct breed by the Kennel Club in 1892. In appearance it resembles a small greyhound with

Whippet. A champion dog of this breed, used for coursing

fox terrier markings, and the best type of animal weighs between 16 lb. and 24 lb. Developing great speed, it is bred largely for rabbit coursing and for racing, especially in the N. of England.

Races are run in heats of six dogs. Each competitor wears a collar of a distinguishing colour,

always arranged in this order: red, white, blue, yellow, green, and black. The length of the track is 200 yds., with a surface of cinders or brickdust, though sometimes races are run over grass. Whippets are taught early to worry a rag; and runners, well known to each dog, precede them up the course, waving rags, towards which the animals run. The runners-up must have all passed the winning mark before the dogs are slipped. Each dog is held at its starting mark by a slipper, who throws it into its stride at the sound of the starter's pistol. Whippets are handicapped according to their weight and previous running. *See* Dogs colour plate. *Consult* The Whippet or Race-Dog, F. Lloyd, 1904.

Whipping. Form of corporal punishment. From earliest times whipping was a common form of punishment for many minor offences, though generally reserved for slaves, villeins, and freemen below the rank of gentleman. The culprit was tied to a whipping post or to the tail of a cart and publicly whipped through the streets. The power of a British court to order a person to be whipped was abolished 1948. *See* Flogging; Knout.

Whippingham. Village and parish of the Isle of Wight, England. On the right bank of the Medina, 1 m. S. of Osborne House and 3½ m. N. of Newport, it has a rly. station. The church of S. Mildred, founded in the 12th century, was rebuilt 1861-62; it contains memorials of the royal family and the tomb of Prince Henry of Battenberg. Pop. 2,169. *See* Osborne House.

Whipple, GEORGE HOYT (b. 1878). American pathologist. He was born Aug. 28, 1878, and educated at Yale and Johns Hopkins universities. On graduation he remained a year at the latter as assistant in pathology, and then occupied various research posts, becoming in 1914 professor of research medicine at California university. In 1921 he moved to Rochester university as professor of pathology. In 1934 he shared the Nobel prize for medicine with G. R. Minot and W. P. Murphy because of their discoveries in connexion with the treatment of pernicious anaemia.

Whip-poor-Will (*Antrostomus vociferus*). Species of nightjar, occurring in N. America. The name is derived from the peculiar cry that the bird utters in the night. The whip-poor-will is about 10 ins. long, and has mottled brown plu-

Whip-poor-Will. North American species of nightjar

mage with a white band on the throat. Stiff bristles at the base of the beak are very conspicuous.

Whip Scorpion. Member of the order Pedipalpi, of the class Arachnida. It derives its name from the modification of its first pair of legs into whip-like organs of touch. The tailed whip-scorpions (*Thelyphonidae*), found in N.E. India, W. Indies, and Central and S. America, have a jointed, thread-like tail attached to the last segment of the abdomen. See Pedipalpi; Scorpion.

Whipsnade. Locality of Beds, England. Situated 3 m. S. of Dunstable, it originally formed part of the Ashridge estate. In 1927 Hall Farm, covering 500 acres, was purchased by the Zoological Society and developed

as a park for wild animals and a sanctuary for British wild flora and fauna. During the Second Great War many animals were removed to Whipsnade from the London zoo, and some buildings were slightly damaged by German bombs. Whipsnade has a rly. station, and its common on the crest of the Chilterns affords splendid views.

Whip Snake.

Popular name for snakes of the genus *Dryophis*. They occur in the Indian sub-continent and Malaya, and are remarkable for the length and slenderness of the body and tail. They are arboreal in habit, and feed upon lizards and small birds.

Whirlpool. Circular eddy, vortex, or current in a river, lake, or sea. It is caused by the configuration of the bed or banks, by

the meeting of two currents, by winds, or by the sweeping of a tidal current through narrow, irregular straits or channels. This last cause produces eddies or whirlpools of great dimensions,

Whip Snake. Long-nosed tree snake, *Dryophis mycterizans*, a native of India, among the branches of a tree
W. S. Berridge, F.Z.S.

e.g. the Maelstrom (q.v.) off the Norwegian coast.

Whirlwind. Term applied to a small revolving storm of wind in which the air whirls round a core of low pressure. Whirlwinds are usually short-lived, but there may be violent changes in wind direction. The direction of rotation may be either right to left or left to right, the height sometimes extending upwards many hundred ft. They often originate in the tropics during a hot season, and over desert regions give rise to dust storms. In the Sahara, such whirlwinds will lift and deposit enough sand in a minute to cover a caravan. On the American prairie and in the Australian bush extensive fires are occasionally caused by a whirlwind carrying sparks and fanning the flames. Whirlwinds are occasionally reported in England, e.g. at Folkestone, July 1, 1945; Worcester, Aug. 17, 1948; Grant-ham, Dec. 14, 1948. See Tornado; Waterspout.

Whisky. Intoxicating spirit. Its former name was usquebaugh, meaning in Gaelic water of life. A spirit like whisky has probably been distilled from grain in northern latitudes from very early times, just as brandy has been distilled from wine in the south.

Most distilleries in Scotland use malted barley mixed with a proportion of unmalted barley; but in Ireland whiskey (as it is usually spelt there) is made from a mixed mash of malted and unmalted grain, generally consisting of about 75 p.c. or 80 p.c. barley, and the remainder oats, rye, or wheat. The

Whipsnade. Park in Bedfordshire developed by the Zoological Society to place wild animals in natural surroundings. 1. Camels' reservation. 2. Bears at play. 3. Zebras grazing

latter is simply added to the malt to give it a distinctive flavour. In Scotland the usual method is for two distillations to take place, the first consisting of the wash still. In the lowlands there are often three distillations, the spirit being run off at 40 to 45 o.p. In Ireland three distillations are the general rule.

Newly distilled whisky has a harsh acrid flavour, tasting more like methylated spirits; consequently, it is matured in wooden casks for three years or longer, during which time certain changes take place in the constituents. To quote an old Dublin book, *Truths About Whisky*, the grain products "are not only sources of flavour, but also when sufficiently matured by keeping undergo development into a number of volatile ethers, so subtle that they almost elude chemical analysis, but which are easily discoverable by the nose and the palate, and still more certainly by their capacity to produce exhilaration." See *Distilling*.

Whispering Gallery. Gallery running along the side of a room or other portion of a building, and so shaped that a whisper delivered at one point of the gallery reproduces itself with great distinctness at a distant point. A famous one is in the dome of S. Paul's (*q.v.*) cathedral, London.

Whist. Card game, the parent of a whole family including contract bridge. It originated in the game of trump or triumph played in the time of Henry VIII. The whole pack of 52 cards is used, the ace counting highest, and the other twelve of each suit bearing their usual face value. There are four players, two pairs of partners facing each other. The cards being shuffled and out and the dealer determined, the latter deals them out one at a time, beginning with the player on his left. The last card, which falls to the dealer, is laid face up on the table and shows the trump suit; alternatively, instead of turning up the last card, a second pack is cut to show trumps. Cards in the trump suit are superior in value to any others, but rank in normal order.

The object of the game is to win tricks, one card from each player's hand constituting a trick. First lead is the privilege of the player on dealer's left; thereafter the winner of a trick leads to the next. A player must follow the suit led if he can; if not, he may play any card in his hand. The highest card in the suit led, or the best trump played, takes the trick.

The side taking the most scores one for every trick over six. When honours are counted, if one side holds ace, king, queen, and jack of trumps, it counts four; three of these honours count two. The side first scoring five points by tricks or honours, in one hand or a succession of hands, wins a game, and a rubber is the best of three games. Sometimes whist is played without reckoning honours. At 4-all they never count. In dummy whist there are only three players, one taking dummy, whose cards are exposed upon the table, for partner.

Scientific whist in trained partnerships is an excellent game, but the standard of play fell as the popularity rose of progressive whist and the whist drive. In these forms of play, several people move from table to table according to a prearranged system, usually playing only one hand at each table and marking up the number of tricks won. Prizes are frequently given for highest totals, and most regrettable for lowest scores, freak scores, etc. See *Solo Whist*.

Whistle. Sharp, shrill, musical sound created by the forced passage of air through a narrow channel; also the instrument used to produce such a sound. A steam whistle is a sounding device connected with a steam boiler or other source of supply. It was invented in 1826 by Adrian Stephens of Plymouth, to render audible the escape of steam from a safety valve. In one form it consists of a plate with thin edges for deflecting steam through an annular opening against the bevelled rim of a hemispherical or elongated cup or bell.

Whistler, JAMES ABBOTT McNEILL (1834-1903). Anglo-American painter. He was born at

James Whistler,
Anglo-American
painter
Self-portrait

Lowell, Mass., July 10, 1834, the son of a military engineer. In 1851 he was sent to West Point, and thence to the coast survey department at Washington. In 1855 Whistler resolved on an artistic career and, going to Paris, entered Gleyre's atelier. Etchings—the French Set—first occupied him. Having become brother-in-law to (Sir) F. Seymour Haden, he passed the best part of 1859 living and working at etching with that artist. His first painting, *At the Piano*, was refused by the Salon in

1859, and the rejection of *The White Girl* in 1863 determined Whistler to migrate to London.

Meanwhile he had begun the *Thames Set* of etchings, and had exhibited at the R.A. his earliest painting of the river, *The Thames in Ice*, 1862. About the same time he became strongly influenced by Japanese art, a phase represented by the large *Princesse du Pays de la Porcelaine*, 1865. In 1865 he visited Chile, where he painted two fine pictures of Valparaiso Harbour, and in 1872 came his famous *Portrait of the Painter's Mother*. This was exhibited at the R.A. and was bought for the Luxembourg.

By this time he had begun to paint *Nocturnes*. One of these, exhibited at the Grosvenor Gallery in 1877, stung Ruskin to indignant abuse. Whistler brought a libel action, obtained a farthing damages, and shortly afterwards went bankrupt, but took revenge in his *Whistler v. Ruskin* pamphlet. This was followed by the *Ten-o'clock Lecture*, 1885, and *The Gentle Art of Making Enemies*, 1890, in which he revealed himself as a caustic controversialist. In social circles he was already known as a wit. In 1884 he had joined the Society of British Artists, of which he was elected president in 1886, but his difficult temperament, not less than his carelessness in financial matters, led to his abandonment of the chair and the society in 1888. From 1898 he was president of the International Art Society. He died at Chelsea, July 17, 1903.

Among works not already cited are portraits of Miss Alexander, Carlyle, and Sarasate; *The Blue Wave*, Biarritz; *Old Battersea Bridge* (Tate Gallery). His etchings and lithographs are unique in their dainty craftsmanship. Characteristic of him were his fancy of naming his pictures as composers name their works, e.g. *Symphony No. 2*, in white, which served to stress the artistic quality of the paintings rather than their subject-matter; and his famous monogram signature, which gradually became a butterfly. See *Etching*.

Whistler, REX JOHN (1905-44). British painter and designer. Born in London, June 24, 1905, he was educated at Haileybury, and studied at the Architectural

Association, the Slade school, and in Rome. His work showed unusual verve and fine craftsmanship, and he became well-known as a muralist with a series of frescoes in the Tate Gallery restaurant. His stage sets, e.g. *The Marriage of Figaro*, and *The Rake's Progress*, had a mock-Baroque manner and vivid decorative detail. He was designer also for the London and New York productions of *Victoria Regina*, 1936. Notable book illustrations were for the Cresset Press edition of *Gulliver's Travels*. Whistler's portrait of Edith Olivier is in the Tate Gallery. He was killed in Normandy July 18, 1944, during the Second Great War. *A Life*, by L. Whistler, appeared in 1948.

Rex Whistler,
British artist

Whitaker's Almanack. British annual work of reference. Founded by Joseph Whitaker (1820-95) in 1868 for the following year, it has become the most comprehensive handbook in the country. It has been issued since 1887 with various editions and supplements, the largest of which contains much statistical information about all countries.

Whitbread, SAMUEL (1758-1815). British politician. Born at Cardington, Beds, the son of a brewer, he was educated at Eton, Christ Church, Oxford, and S. John's College, Cambridge. He was Whig M.P. for Bedford from 1790. A vigorous opponent of Pitt and friend of

Samuel Whitbread,
British politician
After Opie

Fox, he was an advocate of peace, poor law reform, popular education, and national economy; opposed the slave trade, conducted the impeachment of Melville for alleged malversation while treasurer of the navy, and took part in the inquiry into the conduct of the duke of York. Whitbread died by his own hand, July 6, 1815. *Consult* *Memoirs of the Whig Party*, 3rd Lord Holland, 1852.

Whitby. Urban dist., seaport, market town, and suffragan bishopric, in the N. Riding of Yorks, England. Situated at the mouth of the Esk, 20 m. N.W. of Scar-

borough, it is served by rly., and is a popular seaside resort. The parish church of S. Mary is a large building with fine Norman work, box pews, and a three-decker pulpit; round the interior run eight galleries. A cross was erected in the churchyard, 1898, to commemorate Caedmon (q.v.), who was a monk at the abbey. Interesting features are the old toll booth,

pieces until only portions of the shell exist. Its ruins were transferred to the nation in 1920. The

Whitby, Yorkshire. The West Pier with the Abbey and S. Mary's church on the East Cliff. Top, ruins of the ancient Benedictine abbey, from the south-west

piers, lighthouses, Capt. Cook's house, and the museum and art gallery. The Esk is spanned by a swing bridge, and forms a small tidal harbour which shelters a large fishing fleet. Shipbuilding is an ancient industry of the town, and the craft of making jet ornaments is still carried on. The modern holiday resort occupies the W. cliff, with a spa, promenade, gardens, and sports grounds. Here is a statue of Capt. Cook.

The most famous object in the town is the ruined abbey, founded by S. Hilda in 657, and one of the earliest homes of English learning. The original building was destroyed by the Danes in 867, but was restored as a Benedictine abbey in the time of Henry I. Standing exposed to the weather, 200 ft. above the sea, it has fallen to

town was shelled by a German battle-cruiser squadron on Dec. 16, 1914, and in 1940 the council offices were destroyed in an air raid. Market day, Sat. Pop. est. 11,690.

Whitchurch. Parish of Middlesex, England, in Harrow urban dist. Known also as Stanmore Parva and Little Stanmore, it lies $\frac{1}{2}$ m. W. of Edgware (q.v.). From the time of Henry III until the dissolution the manor belonged to the priory of S. Bartholomew, Smithfield. Under the name of Canons and Wimborough in Whitchurch it was granted in 1554 to Sir Hugh Losse, and passed eventually to the duke of Chandos, who here built the grandiose mansion known as Canons (q.v.).

Whitchurch, Middlesex. Parish church of S. Lawrence where Handel was organist, 1718-21

and rebuilt in 1715-20 the body of the church of S. Lawrence, of which Handel was organist 1718-21. In the churchyard is the grave of William Powell (d. 1780), the "harmonious blacksmith," who was parish clerk in Handel's time.

Whitchurch. Urban dist. and market town of Shropshire, England. Situated 19 m. N. of Shrewsbury, near the borders of Cheshire and Wales, it is a rly. junction. The parish church of S. Alkmund, rebuilt in 1713, contains the tomb of John Talbot, 1st earl of Shrewsbury (1388-1453). There are brewing and cheese-making, and a monthly cheese fair. Market day, Fri. Pop. 6,016.

Whitchurch. Parish of Glamorganshire, Wales. It is 1½ m. N. of Llandaff, and stands on the site of an ancient Roman camp. The principal industry is in iron and tinplate works. Pop. 25,000.

Whitcombe. Name of a family of English professional golfers. Three brothers, natives of Somerset, won almost every title between them and in 1935 all played in the Ryder Cup match against America. Ernest Reginald (b. 1890), professional at Meyrick Park, Bournemouth, was perhaps the steadiest; he played in four Ryder Cup matches, and won the Brighton tournament in 1937 with the remarkable score of 268 (64 in the last round). Charles Albert (b. 1895), long professional at Crews Hill, won the Vardon trophy in 1937 for the best average in major events (71-62 for 24 rounds); tied with Henry Cotton at the head of the Penfold league in 1939; was third in the open championship of 1935; and six times in the Ryder Cup team, twice captain. Reginald Arthur (born 1898), professional at Parkstone, was open champion in 1938 after being second to Cotton the previous year. Gaining the Vardon trophy in 1939, he was regarded as the most dashing of the trio. Another member of the family, Ernest Edward (b. 1913), beat a field containing his father Ernest and his uncle Charles to win the Bramshot tournament of 1936.

White. River of the U.S.A. It rises in the Boston Mts., in Arkansas, and flows N. into Missouri, where it turns S.E. and flows through Arkansas to the Mississippi, near the mouth of the Arkansas. It is about 800 m. long, nearly half its course being navigable.

White, Sir George Stuart (1835-1912). British soldier. Born in co. Antrim and educated at

Sandhurst, he first saw active service during the Indian Mutiny in 1857. In the second Afghan War, 1878-80, he won the V.C.; and he was in the Nile Expedition, 1884, and the Burmese War, 1885-87. In 1893 White became commander-in-chief in India. During the S. African War he made a memorable defence of Ladysmith until relieved by Buller on March 1, 1900. He was governor of Gibraltar, 1900-04. In 1903 he was made a field-marshal, and he died June 24, 1912. A statue stands in Portland Place, London, W.1. See Ladysmith, Siege of.

White, Gilbert (1720-93). British naturalist. He was born at Selborne, Hants, July 18, 1720, and was educated at Oriel College, Oxford. Ordained in 1747, he held curacies at Selborne and elsewhere, and devoted himself to the study of the natural history and antiquities of his native parish. He died June 26, 1793. His life was entirely uneventful, and he was little known till near its close, but in 1789 he published his letters to Pennant and Barrington in the form of a volume, *The Natural History and Antiquities of Selborne*, which has become the most widely read book on English natural history ever produced. White observed everything in animal and plant life and the weather, describing them in a style of charming simplicity. His *Journals* were edited by W. Johnson, 1931. See Selborne illus. *Consult* Life and Letters, R. Holt-White, 1901; *Life and Times*, W. S. Scott, 1946.

White, Henry Kirke (1785-1806). British poet. Born in Nottingham, March 21, 1785, the son of a butcher, he was articled to a firm of lawyers, and devoting his leisure to study, published in 1803 a volume of poems entitled *Clifton Grove*, which won the praise of Southey. Deciding to take orders, White proceeded to S. John's College, Cambridge, where the promise of a brilliant career was cut short by his death from

Gilbert White,
British naturalist

After J. Hoppner

consumption on Oct. 19, 1806. White's poetry gained the appreciation of Byron, but posterity has failed to endorse this favourable verdict. His hymn, *Oft in Danger, Oft in Woe*, is still sung.

White, John (1576-1618). An English monk. Born near Worcester, he went to Spain at the age of 20, and three years later became a Benedictine monk, taking the name of Augustine. In 1602 he returned to England as a missionary, then being known as Bradshaw. His plans for training English members of the order led to the foundation of the college of Douai in 1605, when White was made chaplain-general to the English forces in Flanders under Arundel. After overcoming the opposition of the Jesuits, White also secured the foundation in 1607 of the monastery at Douai, transferred after the French Revolution to Downside. White died near Rouen, May 4, 1618.

White, Joseph Blanco (1775-1841). British author. Born at Seville of an Irish family, July 11, 1775, and educated at Seville university, he was ordained a priest in 1800. Gravitating towards free thought, he came to England in 1810, regained his faith, and took Anglican orders. Again afflicted with doubts, he finally, under the influence of Dr. Martineau, embraced Unitarianism. He is best remembered by his fine sonnet on *Night and Death*. His works include *Letters from Spain*, 1822, and *Second Travels of an Irish Gentleman in Search of Religion*, 1833. His death occurred in Liverpool, May 20, 1841.

White, Maude Valérie (1855-1937). British composer. Born of British parents at Dieppe, June 23, 1855, she entered the R.A.M. in London, 1876, and won the Mendelssohn scholarship there three years later. She travelled widely in Europe and S. America, and became known as a writer of melodious and fluent songs and ballads. Herrick's verse inspired many settings, and her part-song ar-

Joseph Blanco White,
British author

British composer

rangement of Byron's So we'll go no more a-roving is familiar. She composed a Mass, 1888, and a number of short pianoforte pieces. She wrote two books of reminiscences, *Friends and Memories*, 1914; *My Indian Summer*, 1932. She died Nov. 2, 1937.

White, WILLIAM ALLEN (1868-1944). American editor. Born Feb. 10, 1868, at Emporia, Kansas, he attended a town school and the state university, supporting himself by setting type in local offices. In 1893 he obtained control of the *Emporia Gazette* and as owner-editor gained for it

White Arum. Leaves and spadix of flowers, surrounded by spathe. Left, unopened spathe

an influence out of proportion to its small circulation, especially with an article, *What's the Matter with Kansas?* A Republican in politics, he was an ardent supporter of Theodore Roosevelt, and a generous if sometimes critical advocate of Franklin Roosevelt's New Deal. In 1940 White became chairman of the committee to defend America by aiding the Allies, although himself believing that the most valuable service his country could render was to stay out of war. The most conspicuous editor of the *Middle West*, he travelled widely, attended the peace conferences in Paris in 1919, won the Pulitzer prize for the best editorial of 1922, and wrote *Lives of Wilson* (1924) and *Coolidge* (1925), also an autobiography (1937). He died at Emporia, Jan. 29, 1944.

White, WILLIAM HALE (1831-1913). British novelist, better known by his pseudonym Mark Rutherford (*q.v.*).

White, SIR WILLIAM HENRY (1845-1913). British naval architect. Born at Devonport, Feb. 2, 1845, and educated at the Royal School of Naval Architecture, he was professor there 1870-81, and then made chief constructor of the

Admiralty. In 1883 he joined Sir William Armstrong and designed a number of battleships, returning in 1885 to the Admiralty as director of naval construction, a post he held till 1902. He brought about the use of turbine engines in cruisers, and revolutionised the design of battleships. He wrote a *Manual of Naval Architecture*, 1877; and *Architecture and Public Buildings*, 1884. Knighted 1893, he died Feb. 27, 1913.

White Ant. Popular name for the insect more correctly called termite (*q.v.*).

White Army. Name given to the Russian forces which served under Gens. Denikin, Koltchak, Wrangel, and Yudenitch (*qq.v.*) in 1919-20 against the Red army of the Bolshevik revolutionaries (see Russia: History, p. 7176). It should not be confused with the White Russian armies of the Second Great War, so named from the area of Russia in which they first fought the Germans, and commanded by Rokossovsky, Zhukov, Chernyakhovsky, and other distinguished soldiers.

White Arum, ARUM LILY, OR TRUMPET LILY (*Richardia africana*). Perennial marsh herb of the family Araceae, native of S. Africa. It has a thick rootstock from which all the large arrow-shaped leaves arise on long stalks. The small yellow flowers are crowded round a spadix as in wake robin, surrounded by the lower part of the large, pure white spathe, which is popularly regarded as the flower. See Wake Robin.

Whitebait. Young of herrings and sprats, a table delicacy. The fishery is carried on about river estuaries—notably that of the Thames—and usually lasts from March till Aug. The early catches consist almost entirely of young sprats, the herring fry making their appearance later in the season.

White Beam OR CHESS APPLE (*Pyrus aria*). Small tree of the family Rosaceae. It is found native in Europe, N. and

White Beam. Leaves and fruit of the small tree. Above, flower cluster

W. Asia, and N. Africa. The trunk has smooth bark, which remains without longitudinal fissures until maturity. The thick simple leaves are very variable, broad oval or lobed with toothed edges. The underside is thickly coated with white hairs. White flowers are in flat clusters, and green-dotted scarlet fruits are as big as holly berries. The wood is hard and fine-grained.

Whiteboys. Term applied to Irish desperadoes who came into prominence during the agricultural depression which set in during the latter half of the 18th century in Ireland. They were particularly numerous in Tipperary and Limerick, and were responsible for many outrages about 1765. Checked for a time by the formation of bands of volunteers, the Whiteboys again gave trouble in 1786, this time in Munster, where they murdered Protestant clergymen. Suppressed again by the military, aided by volunteers organized by the local gentry, the Whiteboys were scarcely heard of until 1821-23, when there was a recrudescence of crime. Their name is perpetuated in the Whiteboy Acts, enactments made between 1775 and 1831, giving powers for the suppression of dangerous associations in Ireland.

Whitechapel. Dist. of London. Part of the met. bor. of Stepney (*q.v.*), it lies E. of Aldgate and was

Whitechapel, London. Church of St. Mary, gutted by German bombs, 1941

constituted a parish in the 17th century. The parish church of St. Mary, once known as St. Mary Matfellow, is mentioned in 1280; rebuilt 1675, 1875, and 1882, it was rendered derelict by German bombs in 1941. Adjoining St. Jude's, which is associated with

the work of Canon Barnett (*q.v.*), and containing a mosaic by Watts, is Toynbee Hall (*q.v.*). In the High Street is Whitechapel art gallery, 1901. This district, which up to 1950 had its own M.P., is a famous Jewish quarter.

White City, THE. London exhibition site at Shepherd's Bush. The buildings, faced with highly decorative stucco, were constructed for the Franco-British exhibition of 1908, and later used for other exhibitions. Taken over by the govt. during the First Great War, the buildings later fell into decay. The site was acquired by the B.B.C. in 1949, the only relics of the original "city" being the White City stadium, and the name of two London Transport stations. *See* Stadium.

White Dwarf. One of a small class of stars of very low luminosity in spite of a high surface temperature. The best-known example is the faint companion of Sirius. Most white (*i.e.* hot) stars are some 50 or 100 times brighter than the sun, but white dwarfs may be 10,000 times fainter than the sun, or equal to the faintest red stars. This intrinsic faintness must be due to small size. The white dwarfs are therefore stars of ordinary dimensions, and must consist of matter of density about 50,000 times that of water.

Whitefield. Urban dist. and parish of Lancs, England. Also known as Stand, it is $5\frac{1}{2}$ m. N. of Manchester and adjacent to Prestwich, with two stations on an electric rly. It is a residential area in an industrial dist. Pop. 12,620.

Whitefield, GEORGE (1714-70). English preacher. Born at Gloucester, Dec. 16, 1714, the son of an innkeeper, he was educated at Pembroke College, Oxford, where he was a servitor. At Oxford he became friendly with John and Charles Wesley, and in 1736 he was ordained in the Church of England. In 1737 he followed the Wesleys to Georgia, where he founded an orphanage, but he was soon in England again, and became widely known as a preacher to enormous audiences, chiefly in the open air, for the clergy in the main disliked his methods.

On his return from another visit to America (1739-41) Whitefield's stern Calvinism led to a break with the Wesleys, and in 1741 a tabernacle was built for him in Moorfields, London. He preached there, finding time also for evangelistic tours, of which the Scottish ones were especially successful,

until 1744, when he made another journey to the U.S.A. He returned in 1748, became chaplain to the countess of Huntingdon, and was provided with a new preaching centre (*v.i.*) in Tottenham Court Road, London.

His missionary journeys were continued until his last visit to America, on which he died, at Newburyport, Mass., Sept. 30, 1770, and was there buried. The type of Methodism preached by Whitefield developed into the Calvinistic Methodist Church. His many writings include a Journal. A greater orator than Wesley, but inferior as an organizer, Whitefield was a preacher to whom the religious revival of the 18th century owes much. *See* Huntingdon, Countess of; Methodism. *Consult* Select Works, ed. J. Smith, 1850; Lives, L. Tyerman, 1878-77; J. P. Gledstone, 1900; A. Belden, 1930.

Whitefield's Tabernacle. Name of several London places of worship. In 1741 a large temporary shed known as the Tabernacle was erected in Moorfields for George Whitefield. It was replaced by a brick building on the same site, opened June 10, 1753. On Nov. 7, 1756, Whitefield opened a chapel in Tottenham Court Road, long known as Whitefield's Tabernacle, which later passed to a Congregational body, by whom it was rebuilt in 1899. On March 25, 1945, it was destroyed by one of the last German rocket bombs of the Second Great War.

Whitefish. Popular name used chiefly in N. America for fishes of the genus *Coregonus* of the salmon family. Although mostly fishes of large fresh-water lakes, a few species are anadromous and migrate to the sea. They are found also in the cold and temperate parts of Europe and Asia, and three species occur in the British Isles. They have the adipose back fin characteristic of salmonoid fishes; scales of moderate size which are detached readily; the mouth open-

Whitefield

ing is small, and most of the minute teeth are shed before maturity. The vendace (*C. vandesius*), which is only 6 ins. to 9 ins. long, is found in Bassenthwaite and Windermere, the Solway Firth, and around Lochmaben. Its flavour suggests that of the smelt. The pollan (*C. pollan*), very similar to the gwyniad, is known only from Lough Neagh and other Irish lakes, where it occurs in vast schools. Though it attains a length of a foot, it is more commonly taken at half that length.

White Flag. Emblem exhibited by a belligerent who wishes to surrender. The agent chosen for parley, if one was held, was traditionally accompanied by a flag-bearer, an interpreter, and a trumpeter. In military circles such a party was often called a flag of truce. *See* Truce.

White Fly. Name given to very small insects of the family Aleo-didae of the order Hemiptera. They have membranous wings powdered with a fine waxy exudation. The nymphs are flat and scale-like. Several kinds are destructive to cultivated plants, especially the common greenhouse white fly (*Asterochthon vaporariorum*).

Whitefriars. Dist. of London. It lies S. of Fleet Street (*q.v.*) between the Temple and New Bridge Street, and contains the City of London School, Sion College, Guildhall School of Music, S. Bride's church (damaged in the Second Great War), and offices of several daily and weekly newspapers and news agencies. A crypt of the Carmelite priory was found in Britton's Court. *See* Alsatia.

Whitehall. London thoroughfare. It connects Charing Cross with Parliament Street, S.W.1. On the E. side are the War office, and the banqueting hall built by Inigo Jones, from a window of which Charles I stepped out on to the scaffold. This hall now houses the Royal United Service Institution and museum. On the W. are the Whitehall Theatre (*v.i.*), the old Admiralty, the Horse Guards, government buildings, and Downing Street. In the roadway stand the Cenotaph and statues of the 2nd duke of Cambridge and 1st Earl Haig. Whitehall, in 1529-1697 the chief residence of the court in London, takes its name from the palace built by Henry VIII and destroyed by fire in 1698. Of a new palace contemplated by James I, only the banqueting hall was erected, 1622. The name Whitehall is used as a synonym for the British government in its adminis-

trative aspect. See Cenotaph: Home Office; Horse Guards. Consult The Old Royal Palace of Whitehall, J. E. Sheppard, 1902.

Whitehall Theatre.

London playhouse, in Whitehall, S.W.1. Seating 620, it was opened Sept. 29, 1930, under the ownership and management of Walter Hackett (q.v.),

whose comedy, *The Way to Treat a Woman*, was the first production. In his Road House, 1933, he and his wife Marion Lorne appeared. Other successes included *Anthony and Anna*, 1935; *The Moon is Down*, 1943; *Worm's Eye View*, 1945. Here also Phyllis Dixey staged "strip-tease" entertainments.

Whitehaven. Mun. bor., seaport, and market town of Cumberland, England. It is in the heart of a coal-mining dist., 8 m. S. by W. of Workington, and is served by rly. Built round a small, sheltered bay, it has been a useful seaport since the 17th century, when the

collieries were developed. Coal, iron, stone, and lime are exported. The mines in the neighbourhood run a considerable distance beneath the sea. In the William Pit disaster, Aug. 15, 1947, over 100 men lost their lives. There are three parish churches, other buildings including town hall, cinemas, etc. The harbour is protected by piers on the N. and W., that on the latter terminating in a lighthouse. The principal manufactures are bricks, tiles, drain pipes, silk goods, flour, and clothing. Paul Jones landed here in 1778. A German submarine bombarded the town in 1915. Market days, Thurs. and Sat. Population 21,142.

A. N. Whitehead, British philosopher

Whitehall, Westminster. View looking north, showing the Home Office on left opposite the Cenotaph. The War Office, with twin turrets, is on the right

to Trinity College, Cambridge, where he had a brilliant career, being fourth wrangler. Fellow and lecturer in mathematics at his college during 1885-1911, he left to lecture in applied mathematics at University College, London, and in 1914 was appointed professor of applied mathematics at the Imperial College of Science. Meanwhile his massive three-volume treatise, *Principia Mathematica*, written in collaboration with Bertrand Russell (q.v.), had made him a dominating figure in the disputed territory between mathematics and philosophy.

In 1924 Whitehead went to Harvard as professor of philosophy, and thenceforth lived in the U.S.A., though he frequently returned to Great Britain to lecture or take part in conferences. His most famous books were the trilogy, *Science and the Modern World* (1925), originally delivered as the Lowell lectures at Harvard; *Process and Reality* (1928), Gifford lectures in Scotland; and *Adventures of Ideas* (1934). These provide a detailed exposition of the philosophy he advocated in part in many lesser works. F.R.S. from 1903, Whitehead was awarded the O.M. in 1945. He died at Cambridge, Mass., Dec. 30, 1947.

Whitehead's philosophical outlook he himself described as the doctrine of organism. For him the world is essentially a process. The elements making up that world are events, and what we call things are merely complexes of events. Reality is to be found in growth; the mechanical view of nature, so general in Whitehead's youth, he found unsatisfactory, though he admitted that it had produced valuable results in science. He substituted for it a biological view, and was called the greatest Platonist of his generation.

John Rowland

Whitehead, GEORGE (c. 1636-1723). English Quaker. Born near Orton, Westmorland, he was converted to Quaker beliefs by George Fox. In 1654 he became an itinerant preacher, and was imprisoned on numerous occasions. His fame spread rapidly, and he was embroiled in many controversies, writing tracts to vindicate his faith. At the reading of the anti-Quaker bill of 1661 he represented the Friends in the house of commons. In prison for almost the whole period from then until 1672, he worked hard to secure the temporary indulgence which resulted in Bunyan's release. Whitehead was the most frequent pleader with Charles II and James II on behalf of the Quakers, and he was largely responsible for securing the Act of Toleration after the accession of William and Mary. He then set himself to clear up the misunderstanding over ideas of the Quakers in a series of pamphlets, and was still active when he died, March 8, 1723, having pleaded in person with seven English sovereigns.

Whitehead, SIR JAMES (1834-1917). British philanthropist. Born March 2, 1834, and educated at Appleby grammar school, he settled in London, and as lord mayor for 1888-89 was instrumental in settling the great dock strike. Made a baronet, 1889, he was Liberal M.P. for Leicester, 1892-94, and one of the founders and first president of the British (later Lister) institute of preventive medicine. He died Oct. 20, 1917.

Whitehead, ROBERT (1823-1905). British inventor. Born at Bolton-le-Moors, Lancs, Jan. 3, 1823, and apprenticed to a Manchester engineering firm, he went in 1844 to Marseilles, and in 1847 to Milan, where he made improvements in silk-weaving machinery. In 1856 he settled in Fiume as the designer of engines for warships, and in 1866 brought out the invention which made him famous, the Whitehead torpedo. He died Nov. 14, 1905. See *Torpedo*.

White Hellebore (*Veratrum album*). Perennial herb of the family Liliaceae. A native of Europe and Siberia, it has a thick, creeping rootstock that yields a poison, protoveratrine. The lower leaves are oblong, and the upper ones progressively narrower. The

Robert Whitehead, British inventor

White Hellebore. Clustered flowers.
Inset, lower leaves and roots

whitish flowers cluster around the upper part of the downy stem.

White Horse. Design of a horse formed by removing turf from the chalk downs of S. England. The most famous is above Uffington, Berks, a figure 374 ft. long which may be prehistoric, though local tradition makes it date from Alfred's reign in celebration of his victory over the Danes in 871. In Tom Brown's Schooldays there is an account of the ancient festival known as the scouring of the horse. White Horse Hill rises steeply to 856 ft. and has ancient earthworks; it is crossed by the Ridgeway. Through the Vale of the White Horse runs the main rly. to Swindon; Wantage is the chief place in the vale, which contains several beautiful villages, e.g. East Hendred. Chesterton's Ballad of the White Horse is permeated with the local legends.

There are six white horses in the neighbouring county of Wilts. That at Westbury, on Bratton Hill, is 175 ft. long, and was cut in 1778 to replace a more primitive design. The others, all modern, are near Alton Barnes, Broad Hinton, Cherhill, Marlborough, and Wootton Bassett.

White Horse. Famous example of these designs, in the downs above Uffington, Berks

White Horse. Town of Canada, in Yukon. It stands at the White Horse rapids on the Yukon river and is the terminus of the White Pass and Yukon rly. from Skagway, Alaska. Pop. 540.

White House, THE. Official residence, in Washington (q.v.), of the president of the U.S.A. Built in English Renaissance style, of freestone, its foundation stone was laid by George Washington. On Aug. 24, 1814, the interior and part of the walls were burned by British forces which had

through the 7th square in the game of chess being played. He is famous for crazy inventions and lunatic logic (e.g. carrying his box upside down so that the rain cannot get in), and sings the song A-Sitting on a Gate. The White King and White Queen are other fantastic characters.

White House. Front view (top) and garden view of the official residence in Washington of the President of the U.S.A.

captured the city. On reconstruction the exterior was painted white. The building was first occupied in 1800 by John Adams, and has been the residence of all subsequent presidents. The name is used as a synonym for the U.S. government.

Whiteing, RICHARD (1840-1928). British novelist. Born in London July 27, 1840, he wrote for many years for the Manchester Guardian and the Daily News. His reputation as novelist rests primarily on No. 5, John Street (1899) an arresting study of sium life in London. He wrote also a satiric novel, The Island, 1888; The Yellow Van, 1903; Little People, 1908; My Harvest, 1915; and, with Geneviève Ward, Both Sides of the Curtain 1918. He died June 19, 1928.

White Knight. Character in Through the Looking Glass, by Lewis Carroll. He conducts Alice

Whiteladies. Ruined nunnery in Shropshire, England. It is near Boscombe and was founded towards the close of the 12th century by the Cistercians. It was called Whiteladies to distinguish it from the Dominican convent in Staffs called Blackladies. There are scanty remains.

White Lady. Designation of various legendary apparitions, generally associated with the destinies of noble houses. They are sometimes supposed to give warning of an impending death, as in the royal houses of Bourbon and Hohenzollern. In Scott's The Monastery, the White Lady of Avenel is a family spirit. White Lady is also the name of a cocktail.

White Lead. Hydrated basic carbonate of lead, $2\text{PbCO}_3\cdot\text{Pb}(\text{OH})_2$. It was made artificially as early as 400 B.C. by soaking lead in vinegar and converting the acetate formed to basic carbonate by the action of carbon dioxide. Later the process was carried out in stacks of pots, each pot containing vinegar and metallic lead, the whole being embedded in a fermenting substance such as spent tanner's bark, which supplied the necessary heat, moisture, and carbon dioxide. This stack process was the only important one till recent times; it reached its highest development in Holland about the 17th century, and the substance produced by it is still called Dutch white lead.

Richard Whiteing
British novelist

White lead is a heavy pigment of good opacity and durability. Being basic it tends to react with the oil media, though not so much as zinc white does. The film is somewhat soft but of good protective value, and white lead is still the basis of most good decorative outside paints. Mixed with zinc oxide, it gives in many respects a more satisfactory outside paint than either alone. In the presence of sulphuretted hydrogen, white lead becomes darkened by the formation of black lead sulphide; this, however, eventually oxidises to the white sulphate. The toxicity of white lead is attributed to the dust of the dry pigment. Its manufacture and use are therefore controlled by the government.

Whiteleg (*Phlegmasia dolens*). Disease occurring during pregnancy or, more commonly, just after delivery. It is characterised by pain, swelling, hardness, and whiteness of the surface of one or both legs. It is due to obstruction of the veins and lymphatic vessels, resulting from septic absorption. Most cases recover, but permanent varicosity of the veins may follow. Treatment consists in keeping the leg absolutely at rest in an elevated position for at least six weeks.

Whiteley, WILLIAM (1831-1907). British merchant, born at Agbrigg, Yorks, Sept. 29, 1831.

William Whiteley,
British merchant

In 1863 he opened a small fancy drapery shop in Westbourne Grove, Bayswater, London. By adhering to a trading policy which gave small profits, and by displaying his goods in an unusually attractive style, he steadily increased his business. By 1899 his establishment had so expanded that profits averaged £100,000 per annum; and in that year Whiteley's was turned into a limited company. Whiteley died Jan. 23, 1907, after being shot in his office by Horace Rayner, to whom he had refused monetary assistance. *Consult* The Universal Provider, R. S. Lambert, 1938.

Whitelocke, BULSTRODE (1605-75). English lawyer and politician. He was born in London, Aug. 6, 1605, educated at Merchant Taylors' and St. John's College, Oxford, and called to the bar at the Middle Temple, 1626. He represented several constituencies in parlia-

ment, was chairman of the committee that prosecuted Strafford, and sat on the committee appointed to draw up the charge against Charles I, though he took no part in the trial. A commissioner of the great seal, 1648, 1649, 1654-55, and 1659, he was ambassador to Sweden, 1633-54. After the Restoration Whitelocke lived in retirement, dying July 28, 1675. He wrote *Memorials of English Affairs* (1625-60), publ. 1682; *Journal of the Swedish Embassy*, publ. 1772. *Consult* Memoirs, R. H. Whitelocke, 1860.

Bulstrode White-
locke,
English lawyer

Whiteman, PAUL (b. 1893). American band leader. Born into a musical family at Denver, he played the violin in his father's orchestra at 10. In 1915 he was in the World's Fair orchestra under Victor Herbert, and his own jazz band was started in 1919, the pianist Ferdie Grofé soon experimenting with unheard-of orchestrations. Whiteman's band came to the London Hippodrome in 1923; next year saw his first concert at the Aeolian Hall, N.Y., when he first presented *Rhapsody in Blue*. In 1927 he discovered Bing Crosby, until then unknown. The 1930 film *King of Jazz* was the peak of Whiteman's success, and thereafter his contribution to entertainment was mostly the commercialising of jazz. Bix Beiderbecke, Tommy and Jimmy Dorsey, Eddie Lang, Joe Venuti, Jack Teagarden, and Johnny Mercer all played with Whiteman.

White Metal. Term with two distinct metallurgical applications: (1) A group of tin-base alloys used for the manufacture of bearings in all branches of the engineering industry; those alloys whose principal constituent is tin commonly contain varying amounts of copper, antimony, and lead, and they have remarkable anti-friction properties. (2) The copper sulphide produced in the first stage of converting a copper matte to blister copper; its first appearance indicates that all the iron has been oxidised and transferred to the slag.

White Mould (*Peronospora*). Genus of parasitic fungi of the family Peronosporaceae. They attack living plants; the delicate threads (hyphae) run through the spaces in the cellular structure of

their hosts, and the spore-bearing branches issue through the breathing pores (stomata) as erect white threads bearing at their extremities the reproductive bodies. Different species attack different hosts: e.g. *P. schleideniana* is the onion mould; *P. nivea*, parsnip mould.

White Mountains. Group of the Appalachian system in the N.W. of New Hampshire, U.S.A. They extend from the valley of the Androscoggin river in a S. direction to Squam Lake, but in a broader interpretation include several other small groups within the state. The loftiest summits occur in the Presidential Range, where Mount Washington reaches 6,293 ft.

White Nile. Name for that part of the Nile between its confluence with the Bahr-el-Azrek and Lake No, called by the Arabs Bahr-el-Abiad (*q.v.*). White Nils province was formerly a division of the Anglo-Egyptian Sudan, on both sides of the middle portion of the White Nile. The capital was El Duseim. Huge quantities of papyrus occur. *See* Nile.

White Paper. Name given to official documents issued by the British Treasury, Foreign office, and other govt. depts. *See* Blue Book.

White Pass. Pass of N. America, on the border of Canada and Alaska. It has an elevation of 2,886 ft. in the Kotusk Mts., and is used by the rly. and other routes from the Skagway river and Chilkoot Inlet to the goldfields of the Klondike.

White Plains. City of New York, U.S.A., the co. seat of Westchester co. It is 23 m. N.N.E. of New York City, of which it is a dormitory suburb, served by the New York Central and other rlys. Here on Oct. 28, 1776, was fought a battle in the War of Independence. Pop. 40,327.

White Russia. European republic of the U.S.S.R. It has no coastline, being bounded by Latvia and the R.S.F.S.R. on the N., the R.S.F.S.R. on the E., Ukraine on the S., Poland and Lithuania on the W. The W. of the present White Russia was conquered by Poland in 1920 and ceded to her under the treaty of Riga, 1921. reoccupied by Russia in Sept., 1939, it was reincorporated in White Russia on Nov. 2 that year. Poland accepted this change under the Russo-Polish treaty of 1945. White Russia is 81,090 sq. m. in area. Its pop. in 1940 was about 10½ millions, some 80 p.c. of whom were White Russians 10 p.c.

Jews, the remainder Russians, Ukrainians, and Poles. Minsk (238,772) is the capital.

The Dvina traverses the N. of the country, while the Dnieper and its tribs. the Beresina and Pripiet drain the S. White Russia is a fairly level country, with some hills, and slopes generally from N. to S., where the extensive Pripiet Marshes lie to the W. along the valley of that river. The rainfall is somewhat heavier, and the temp. more equable, than are those of the R.S.F.S.R.

Principally an agricultural region, although the soil is nowhere very fertile, White Russia developed some industry during the years between the revolution and the German invasion in 1941, about 200,000 being employed in industry in 1939. Gomel became an important centre for agricultural machinery of all kinds, other industrial products of the country being leather, matches, and paper. Chief agricultural products were potatoes, feeding stuffs, flax, bristles, and horticultural produce. There are also valuable deposits of rock salt; and peat is much worked, making the country virtually self-dependent for fuel. Large areas of marshland were drained and various waterways were constructed, notably the Dnieper-Bug canal, between 1920 and 1941.

White Russia (sometimes called in English, Belorussia) takes its name from the White Russians who inhabit the land. These were one of three Slav groups which migrated from the W., and were differentiated from the Great Russians, who settled farther N., and the Ukrainians, who settled farther S., by language and customs. Their name is said to come from the white felt bonnet and white coat of their traditional costume. White Russian differs so much from Great Russian that it was long considered a separate language. It has basic affinities with Polish, and, as the official language of the Lithuanian duchy afterwards merged in Poland, it underwent considerable external Polish influence also. White Russian was the first Russian idiom to be written, the statute books, documents, and chronicles of the ancient Lithuanian duchy being written in it. In 1519 the Bible was translated into White Russian; but during the same century Polish replaced it as the official and polite speech of the land, and White Russian became a peasant tongue. There are only

a few songs in the White Russian dialect before the 19th century revival when the language was used in poems of literary merit by several writers, notably Jan Czeczot (d. 1847). The White Russians and their language were repressed under the Russian tsars; but on Jan. 1, 1919, White Russia, formed from the earlier govt. of Minsk, proclaimed its independence (r.s. for loss of territory to Poland, and its recovery); the former govts. of Gomel, Vitebsk, and Smolensk were added 1924-26. In German occupation from Aug., 1941; White Russia was not completely liberated until July, 1944. Both agriculture and industry were virtually destroyed in the fighting, towns, villages, and farm buildings being very severely damaged. Restoration was immediately put in hand, and by the end of 1947 more than 6,000 factories of various kinds were working once more.

White's Club. London social club. It is at 37-38, St. James's Street, S.W.1. Founded in 1693 as White's Chocolate House, it was famous as a centre of gallantry and gaming. Destroyed by fire, April 23, 1733, it became a regular club in 1736, under the management of one Arthur (d. 1761), who later founded the club which bears his name. Once famous as a Tory centre, White's is now non-political. See Bow Window.

White Sea (Russ. Bieloye More). Part of the Arctic Ocean. It lies between Cape Kanin, the most N. point of the Kanin peninsula, and the peninsula of Kola or Murmansk. It is 330 m. long, 150 m. wide, and its greatest depth is 700 ft. It contains a few islands, on one of which, Solovetskoi, is a famous convent and place of pilgrimage. There is connexion with the Black and Caspian Seas by canal. The sea is ice-bound from Sept. to June. Salmon, herring, and navaga, a fish allied to the cod, are caught. See Archangel.

White Slave Traffic. Popular term for the criminal practice of procuration (q.v.).

White Spirit. Name given to petroleum distillates intermediate between gasoline and kerosene, with a distillation range of 150°-200° C. They are used as thinners in paints and varnishes and are sometimes sold as turpentine substitute or mineral turpentine. They are also used for dry cleaning. They must be free from corrosive and ill-smelling sulphur compounds, and must not leave oily residues on evaporation. They

are usually refined by acid treatment followed by fresh distillation.

White Star Line. A British steamship company which in 1934 was united with the Cunard Line

to form the Cunard White Star (q.v.). Originally running sailing vessels to Australia, the company was reconstituted by T. H. Ismay in 1871 as the Oceanic Steam Navigation Company. All the ships' names ended in "ic," Majestic and Titanic being famous.

White Sulphur Springs. Watering-place and pleasure resort of W. Virginia, U.S.A., in Greenbrier co. Mineral springs made the place a rendezvous of fashionable health-seekers, and before the Civil War it was a resort comparable in brilliance to Bath. Cottages were built in luxurious style, and in 1854 what was then the largest hotel in the U.S.A. was erected here. After the nearby battle during the Civil War, the ballroom was used as a hospital for the many casualties. After the war the town's great prosperity passed away. White Sulphur Springs is 140 m. S.E. of Charleston, at an alt. of 1,925 ft. in the forested Allegheny mts., on the main line of the Chesapeake and Ohio rly. Pop. 1,434.

Whitethroat. Migratory bird, of which two species occur in Great Britain. The greater whitethroat (*Sylvia communis*) is common everywhere in the country and has reddish-brown plumage on the upper parts, with pinkish-white below. It is generally found in thickets and hedges, and is often known as the nettle creeper. The lesser whitethroat (*S. curruca*) is slightly smaller, and has a grey tinge in its plumage. Rare in England and Scotland, it is absent from Ireland. See Eggs colour plate.

Whitewash. Mixture of whitening, water, and size, used for whitening internal walls and ceilings. Limewashing is covering walls with a mixture of lime and water, and is sometimes included in the term whitewashing. The whitening used in making whitewash is finely powdered white chalk, which should be

White Star Line flag, red with white star

Whitethroat. The greater species, found in hedgerows

left for about six hours just covered with water. Double size in the proportion of one quart to six pounds of whiting should be added, and the mixture allowed to stand in a cool place until it becomes a jelly. One pound of diluted jelly covers about 6 sq. yds. Many proprietary pastes are sold either ready for use or to be watered down.

Whitgift, JOHN (c. 1530-1604). English prelate. Son of a Grimsby merchant, he passed from S. Anthony's school,

John Whitgift,
English prelate

London, to Cambridge, where he took orders in 1560. He was regius professor of divinity in 1564, helped to draft the university statutes, and in 1570 was vice-chancellor. Bishop of Worcester, 1577-83, he then had 20 years as archbishop of Canterbury, enjoying the favour and support of Elizabeth. Fearless, incorruptible, personally pious, full of reforming zeal, and doctrinally Calvinist, he opposed Puritans and Presbyterians. He erected and endowed a school and almshouses bearing his name at Croydon (q.v.), and died at Lambeth, Feb. 29, 1604. *Consull Life and Acts*, J. Strype, 1822.

Whithorn. Royal and mun. bor. and seaport of Wigtownshire, Scotland. Situated on the Irish Channel, 11 m. S. of Wigtown, it is a branch rly. terminus. Whithorn is one of the most ancient towns in Scotland, having been created a royal burgh by Robert I. The parish church stands on the site of a priory founded by S. Ninian in 397, and the town was the seat of the bishops of Galloway until the Reformation. Of the priory, rebuilt in the 12th century, there are some remains. Pop. 951.

Whiting (*Gadus merlangus*). Fish belonging to the cod family. Very nearly related to the haddock, it may be distinguished by the absence of the chin barbel and of the black patch above the pectoral fin. It usually weighs rather less than 2 lb., and is much in de-

Whiting. British edible fish, valued for the delicacy of its flesh

mand for the table. It occurs in shoals, usually about sandy shores, and feeds chiefly on the fry of other fish. *See* Pout.

Whitley, JOHN HENRY (1866-1935). British politician. Born at Halifax, Feb. 8, 1866, he was educated at Clifton and London university, and entered business in his native town. From 1900 to 1928 he was Liberal M.P. for Halifax. Junior lord of the Treasury and a government whip, 1907-10, he was deputy-Speaker and chairman of committees from 1911 until in 1921 he succeeded Viscount Ullswater as Speaker. He resigned in 1928, when he declined the customary honour of a peerage. In 1930 he became chairman of the B.B.C., holding this position until his death on Feb. 3, 1935. He evolved the Whitley Council (q.v.) for industry.

John H. Whitley,
British politician

Whitley Bay. Urban district of Northumberland, England, and a well-known health and pleasure resort. It is on the E. coast, 2 m. N. of the Tyne, with railway stations. Pop. est. 32,000.

Whitley Council. Representative body of the type recommended by the Whitley committee on the relations between employers and employed. This committee was set up in 1916 under J. H.

Whitley, deputy-Speaker of the house of commons, to explore reasons for and suggest methods of preventing the unofficial strikes that were threatening the war effort. This committee recommended that individual industries should have national joint industrial councils and district councils; and that businesses should establish works committees as a means of consultation between management and employees. Such coun-

cils and committees, under various names, were widely introduced into industry, local govt., and the civil service. Between the Great Wars the work of Whitley councils and committees in industry was frustrated in several trades by large-scale unemployment. Similar councils, called joint production committees, were introduced during the Second Great War.

Whitlow. Inflammation and suppurative of the terminal phalanx of the finger, due to infection by any pus-forming micro-organism. It may lead to separation of the nail from its body, and can be most dangerous if the inflammation enters the sheaths of the fingers. Treatment consists in applying hot fomentations of boracic acid and hot soaks of the whole arm, while penicillin and the sulpha group may be helpful. The word is a corruption of quick flaw, i.e. a sore in the quick, the sensitive flesh under the nail.

Whitman,

WALT (1819-92). Ameri-

can poet. Of English and Dutch descent, the son of a carpenter.

he was born at West Hills, Long Island, May 31, 1819,

and after an elementary education worked at carpentry, building, printing, teaching, and journalism.

Wandering through much of the U.S.A., he learnt more from fellowship with men and women of all classes than from books, though a student of great literature. He served as an army nurse through the Civil War, wrecking his robust constitution thereby,

then became a clerk in the treasury dept. at Washington. After a paralytic stroke in 1873 he lived in comparative poverty at Camden, N.J., where he died, unmarried, March 26, 1892.

Whitman's chief work, *Leaves of Grass* (q.v.), first appeared as a slender volume in 1855, but the final revised edition, 1881, incorporated most of his poetry. The irregular, unrhymed lines in which most of it is written, in-

Walt Whitman

Whithorn, Wigtownshire. Ruins of the 12th century priory erected on the site of an older building founded by S. Ninian

Whitley, deputy-Speaker of the house of commons, to explore reasons for and suggest methods of preventing the unofficial strikes that were threatening the war effort. This committee recommended that individual industries should have national joint industrial councils and district councils; and that businesses should establish works committees as a means of consultation between management and employees. Such coun-

then became a clerk in the treasury dept. at Washington. After a paralytic stroke in 1873 he lived in comparative poverty at Camden, N.J., where he died, unmarried, March 26, 1892.

Whitman's chief work, *Leaves of Grass* (q.v.), first appeared as a slender volume in 1855, but the final revised edition, 1881, incorporated most of his poetry. The irregular, unrhymed lines in which most of it is written, in-

accordance with the author's belief that the American spirit could not be bound by the shackles of traditional verse-forms, are often uncouth, but have a noble music and cadence of their own.

Contemptuous of tradition, literary, moral, or political, Whitman regarded himself as the prophet of America, which he believed would give the world a free society existing for the mass-production of great personalities. This democracy of the future was to be welded together by the love of comrades (as in *Calamus*), and by equality (*Salutation*, *Song of the Road*). A mystic without a creed, Whitman sees God expressing Himself everywhere—in cities as well as in wild nature. The body is the manifestation of the spirit, which is liberated by death for a higher life. Whitman's meditations on death (*Drum-taps*, *Passage to India*) include some of his greatest work.

Holding that everything is worthy of celebration in song, Whitman has little sense of relative values. But he has at his best the poetic vision which illuminates the sordid and commonplace, and his robust optimism does not blind him to the uglier aspects of modern society. In his prose work, *Democratic Vistas*, 1871, influenced by Carlyle, he warns America against a soulless materialism. His other important prose work is *Specimen Days and Collect*, 1882.

Of this frank, confident, naïve personality, with an immense capacity for affection, the chaotic and rhapsodical poetry appeals by the breadth and serenity of its outlook, and an emotional tenderness usually manly and wholesome. The extreme lack of reticence in certain poems created a violent prejudice, and the poet of democracy has never been popular, though he has fervent admirers and his indirect influence is great and increasing.

Bibliography. Complete Writings, 1902; Uncollected Poetry and Prose, 1921; Lives, T. Donaldson, 1896; H. B. Binns, 1905; J. Bailey, 1920; H. B. Morris, 1930; N. Arvin, 1938; Critical Studies, J. A. Symonds, 1893; B. de Selincourt, 1914; G. Bullett, 1925; Walt Whitman in England, H. Blodgett, 1934.

Whitney, MOUNT. The highest peak in the U.S.A., exclusive of Alaska. In the Sierra Nevada (g.v.) range, Calif., it reaches an alt of 14,502 ft.

Whitney, ELI (1765–1825). An American inventor. Born at Westboro, Mass., Dec. 8, 1765, and edu-

Whitstable, Kent. Parish church of All Saints, some distance from the town in the hamlet of Church Street

cated at Yale, he became a teacher in Georgia. He constructed the cotton gin for separating seed

from fibre, one of the most important inventions connected with the cotton industry. His first crude machine was stolen, and though Whitney was awarded £10,000 by South Carolina, litigation left him almost penniless. In 1798 he turned his attention to the manufacture of firearms, from which he made a large fortune. He died Jan. 8, 1825. See Cotton.

Whitney, WILLIAM DWIGHT (1827–94). American philologist.

Born at Northampton, Mass., Feb. 9, 1827, and educated at Williams College, he studied Sanskrit at Yale, Berlin, and Tübingen, and in 1854 was appointed professor of Sanskrit at Yale.

His most consulted works are *Language and the Study of Language*; *Life and Growth of Language*; *Sanskrit Grammar*; *Oriental and Linguistic Studies*; and editions and translations of various Sanskrit works. He also superintended the publication of the great *Century Dictionary*, and helped to revise Webster's Dictionary. Whitney was the first to lay stress on the importance of analogy in linguistic questions, and held that language originated in the acceptance of conventional terms. He died June 7, 1894.

Whitney Museum. Collection of American art. In W. 8th Street, N.Y.C., it was founded in 1931 by Gertrude Whitney, herself a distinguished sculptor. Its permanent

collection is entirely national, and it pays special attention to contemporary art. It holds annual exhibitions, and publishes books on American art and artists.

Whitstable. Seaside resort and urban dist. of Kent, England. Situated on the

coast 6 m. N. by W. of Canterbury, on the rly., it has a small harbour and carries on a coasting trade; but its fame is due to oyster fisheries. Pop. est. 17,000.

Whitsunday (A.-S., *hwita Sundaeg*, White Sunday). Name given in the English Church calendar to the festival which commemorates the gift of the Holy Ghost to the disciples (Acts 2). Observed in the Christian Church from very early times, it is the Christian Pentecost, as Easter is the Christian Passover, and is regarded as celebrating the ingathering of the first-fruits of the spiritual harvest. The name White Sunday, first used in England about the time of the Norman Conquest, is usually derived from the white garments or chrismos worn on this day by the newly baptized. The tradition that the event celebrated fell upon a Sunday is supported by John 18, v. 28, for if the date of the Crucifixion was the eve of the Passover, Nisan 14, the first of the 50 days and the 50th day were Sundays. In Scotland the name of Whitsunday is given to May 15 each year, that day being one of the legal terms—the other is Martinmas, Nov. 11—at which rent and interest are payable. See Passover; Pentecost; Weeks, Feast of.

Whitten, WILFRED (1864–1942). Name of an English journalist known as John O' London (g.v.).

Whitten-Brown, SIR ARTHUR (1886–1948). British airman. See Brown, Sir A. W.

Whittier, JOHN GREENLEAF (1807–92). American poet. He was born at Haverhill, Mass., Dec. 17, 1807, son of a

Quaker farmer, and adhered to his father's creed. Early years were spent on his father's farm, and a first poem appeared in 1826, in *The Free*

John G. Whittier

Press, edited by Garrison. Whittier's earliest work for the anti-slavery movement was done as a journalist. In 1833 he wrote *Justice and Expediency*, an anti-slavery manifesto, and attended at Philadelphia the first meeting of the American Anti-Slavery Society, being on the committee which drafted its declaration of principles. In 1835-36 he represented his district in the state legislature, removing then to Amesbury, where he lived thenceforth, except while editing 1838-40 *The Pennsylvania Freeman* at Philadelphia.

From 1847 Whittier contributed leaders and poems to *The National Era* of Washington, and when *The Atlantic Monthly* was established in 1857 he found a second organ of opinion ready to publish his verses. In 1860 and 1864 he was a member of the Massachusetts electoral college, but with the close of the Civil War and the triumph of the anti-slavery movement he ceased to take any active interest in politics. He died at Hampton Falls, N.H., Sept. 7, 1892. Whittier will be remembered by the fine rhetoric of some of his anti-slavery lyrics, the genuine charm of such ballads as *Maud Muller* and *Barbara Frietchie*, and a vivid picture of New England rural life in *Snow-Bound*. *Consult* *Life* and *Letters*, S. T. Pickard, 1894; *Crusader* and *Prophet*, A. Rowntree, 1946.

Whittington. Parish of Derbyshire, England. Standing on the Rother, 2½ m. N. of Chesterfield, of which it is a district, it has a rly. station. In the parish is the stone cottage called *Revolution House*, where the earls of Devonshire and Danby and John Darcy met in 1688, to arrange the invitation to William of Orange. Iron is worked and steel manufactured. Pop. 11,617.

Whittington, RICHARD (d. 1423). Lord mayor of London. The son of Sir William Whittington, a Gloucestershire knight, he became a mercer with a prosperous business in London. He was lord mayor in 1397-98, 1406-07, and 1419-20. He frequently advanced sums of money to Richard II, Henry IV, and Henry V, and subscribed largely to charities. He died in early March, 1423. The tale of Dick Whittington and his cat dates from the 16th century; the incidents of Dick walking to London, turning back at Highgate, and hearing the bells toll "Turn again, Whittington, lord mayor of London," have been worked up into one of the most familiar pantomimes. *Consult* *Life*, Sir W. Besant.

1881; *Talking* of D. W., H. Pearson and H. Kingsmill, 1947.

Whittle, SIR FRANK (b. 1907). British airman and inventor. Born at Leamington, June 1, 1907, he

Sir Frank Whittle, British airman and inventor

enlisted in the R.A.F. as a boy apprentice in 1923, and gained a cadetship at Cranwell college, where he first conceived the idea of applying jet propulsion to aircraft. Whilst developing his invention he served with fighter squadrons, but in 1936 was attached to the special duties list. His first engine ran successfully in 1937, and was installed in an operational aircraft in 1941. Whittle, an M.A. of Cambridge, was knighted in 1948 and awarded a govt. grant of £100,000. He retired with the rank of air commodore, and joined B.O.A.C. as technical adviser.

Whittlesea OR **WHITTLESEY**. Market town and urban dist. of the Isle of Ely, Cambs, England. It is 5 m. by rly. E. of Peterborough. There are two old churches, dedicated to S. Andrew and S. Mary. The land all around is drained by artificial channels. Pop. approx. 8,800.

Whitty, DAME MAY (1865-1948). British actress. Born in Liverpool, June 19, 1865, she went on the stage there in 1881, making her London debut next year in *Boccaccio*, at the Comedy Theatre. She joined Irving in 1895, appearing in *The Lyons Mail*, *The Corsican Brothers*, and other Lyceum melodramas. She created the part of Susan in *Quality Street*, 1903.

Richard Whittington, three times lord mayor of London
From an engraving by Elstracke. c. 1620

and did notable work in plays by Granville-Barker and Pinero. After the First Great War she went in more for comedy, e.g. *The Last of Mrs Cheyney*; but *Night Must Fall*, 1935, gave her one of the best parts in her career. She went to Hollywood for a screen version of that play, and was in the British film *The Lady Vanishes*, 1938. Created D.B.E., 1918, and married to the actor Ben Webster (q.v.) since 1892, she died in Hollywood, May 29, 1948.

Whitworth. Urban dist. and parish of Lancs, England. It is 3 m. N. of Rochdale, with a station on the rly. Principal industries: mining and quarrying. Pop. 8,360.

Whitworth, SIR JOSEPH (1803-87). British engineer. Born Dec. 21, 1803, at Stockport, he set up in

Sir J. Whitworth, British engineer

Manchester in 1833 as a tool maker. He invented many improvements in the manufacture of machine tools, and by micrometric methods obtained absolutely plane metal surfaces which made him famous. He standardised the measurements of screw threads and gauges, one of the greatest steps in mechanical progress. In 1854 he was asked by the government to design machinery for the manufacture of small arms, but, his rifle being rejected, he turned his attention to the manufacture of cannon, in which he effected a great advance by using cast steel. In 1869 Whitworth was made a baronet and awarded the Albert medal of the Society of Arts. He endowed 30 scholarships in mechanics, and left nearly £600,000 for education and charitable purposes on his death, Jan. 22, 1887. The engineering firm he founded in Manchester was amalgamated in 1897 with that of Sir William Armstrong (q.v.) at Elswick.

Whooping-cough OR **PERTUSSIS**. Acute infectious disease characterised by catarrh of the air-passages and a spasmodic cough or "whoop." The organism responsible has not been identified with certainty. Transmission of whooping-cough from person to person is most often due to direct droplet infection. Infants and children are specially liable to attack, but adults and old people sometimes suffer from the disease in severe form. The early symptoms are those of an ordinary cold.

In about a fortnight begins the characteristic "whoop" caused by excitability of the mucous membrane and disturbance of the vagus nerve. Bleeding from the nose is common, and small blood vessels in the skin may be ruptured. This stage may continue for four weeks up to three months, the whoop gradually disappearing and the paroxysms of coughing occurring at longer intervals.

Medical treatment is limited to relieving the severity of the cough by sedative drugs, and guarding against loss of weight by giving frequent small meals. The room should be warm but well ventilated. Whooping-cough is rarely fatal among children who are well looked after, but among the poorer classes in large towns it is responsible for the death of many infants under one year of age, owing to the development of bronchitis or broncho-pneumonia. Prophylactic injection against whooping-cough has been combined with that against diphtheria.

Whorl or **VERTICIL**. In botany, a cluster of leaves or flowers that grow in a circle around the stem. Plants of the family Labiatae are examples of this method of growth. The term is also used in zoology to describe the volutions of the spire of a univalve shell.

Whortleberry. See Bilberry.

Who's Who. British annual publication. It first appeared on March 21, 1844, being founded by Alfred Baily (1808-84), who, with his brother Charles (1821-92), had a publisher's business at Royal Exchange Buildings, London. It gives details, provided by the subjects, of the lives of notable living persons, arranged in alphabetical order. Douglas Sladen planned a new form as editor 1897-99. The publishers are A. & C. Black, Ltd.

Whyalla. Industrial centre in S. Australia. On the W. shore of Spencer Gulf, it is a rly. terminus 145 m. direct N.W. of Adelaide. At the end of a pipe-line, it has blast furnaces, iron and steel works, and shipyards, industries established by the Broken Hill mining co. In 30 years Whyalla has grown from a small sheep station to a well-planned town of 8,000 pop.

Whydah, **WHIDAH**, **QUIDAH**, or **WIDA**. Seaport of Dahomey, French W. Africa. Connected by rly. with Kotonu, about 100 m. to the E., it is the administrative h.q. of a dist. of the same name.

Whymper, **EDWARD** (1840-1911). British mountaineer. Born in London, April 27, 1840, and trained as a wood-engraver, he

went in 1860 to the Alps to make sketches of mountain scenery. There he gained a reputation as an intrepid mountaineer, and on July 14, 1865, was the first to reach the summit of the Matterhorn. In visits to Greenland, 1867 and 1872, he made valuable collections of fossils, doing the same during his visit to the Andes of Ecuador, 1879-80, when also he made two ascents of Chimborazo. His last expedition of note was to the mountains of the Great Divide, Canada, 1901-05. Whymper published his travels, with his own illustrations, in *Serambles Among the Alps*, 1871; *Travels Among the Great Andes of the Equator*, 1892; *Chamonix and Mont Blanc*, 1896; *Zermatt and the Matterhorn*, 1897. He died Sept. 16, 1911. Robert Douglas played Whymper in a film, *The Challenge*, 1938.

Edward Whymper, British traveller

Whyte, **ALEXANDER** (1837-1921). Scottish divine and author. Born at Kirriemuir, Jan. 13, 1837, the son of a shoemaker, he worked as a hand-loom weaver, became a teacher, and in 1858 entered Aberdeen university, graduating in 1862. He studied for the Free Church ministry at New College, Edinburgh, and became minister at Free S. John's, Glasgow, in 1866. He removed to Free S. George's, Edinburgh, in 1870, and after three years was sole minister. Principal of New College from 1909, he resigned in 1918. He wrote biography and criticism: *Commentary on the Shorter Catechism*, 1882; *The Apostle Paul*, 1903; *The Walk, Conversation, and Character of Jesus Christ*, 1905; *Bunyan Characters* (4 vols.), 1894; *Bible Characters* (6 vols.), 1897. He died at Hampstead, Jan. 6, 1921.

Alexander Whyte, Scottish divine

His eldest son, Sir (Alexander) Frederick Whyte (b. Sept. 30, 1883), was Liberal M.P. for Perth, 1910-18, and president of the Indian legislative assembly 1920-25, being knighted 1922.

Whyte-Melville, **GEORGE JOHN** (1821-78). British novelist. Born in Fife. June 19, 1821, and edu-

cated at Eton, he entered the Coldstream Guards, retiring with the rank of major in 1849. In the Crimean War he was an officer in the Turkish cavalry. At his home at Tetbury, Glos, he gave full rein to his predilection for field sports, and wrote many novels dealing largely with the hunting-field and country life, or of historical romance. Among the best-known are *Digby Grand*, 1853; *Holmby House*, 1860; *Market Harborough*, 1861; and *The Gladiators*, 1863. The proceeds of the extensive sales he devoted to philanthropic objects. He met his death from a fall in the hunting-field, Dec. 5, 1878.

Wichita or **BIG WICHITA**. A river of Texas, U.S.A. Rising in the N. part of the state, it flows 235 m. E. to join the Red river. The Little Wichita, flowing N.E., is also an affluent of the Red river.

Wichita. Second largest city of Kansas, U.S.A., the co. seat of Sedgwick co. It stands on the Arkansas river, 210 m. by rly. S.W. of Kansas City, and is served by the Atchison, Topeka, and Santa Fé and other rlys. It is the seat of the Friends' university. In Riverside Park, 145 acres are zoological gardens. Wichita ranks fourth as a national milling centre. Its refineries turn out daily 11,000 barrels of petroleum. Other industrial plants are large packing establishments, stockyards, foundries and machine shops, and motor vehicle works. Wichita was settled in 1870 and chartered as a city next year. Pop. 114,966.

Wick (A.S., *weoca*, weak, pliant). Originally the pith of a rush placed through a candle. Wicks are now pieces of twisted or woven fabric, generally cotton, used in lamps and automatic lighters to lead oil or spirit to the flame. Candle and lighter wicks are usually round, and lamp wicks flat. They act by capillary attraction, drawing oil or other fuel from the reservoir; when the fuel comes in contact with the air it forms a gas, and so maintains combustion. Cellulose and glass wool wicks are also used.

Wick. Royal and parl. burgh, seaport, and county town of Caithness, Scotland. One of the chief centres of the Scottish herring fishery, it is situated on the E. coast, 20 m. S.E. of Thurso, with

G. J. Whyte-Melville, British novelist

a station on the rly. The town consists of two dists., Wick and Pulteneytown, the first being on the N. side of the bay. The chief buildings are churches and the town and county buildings. A harbour, in two parts, is accessible at all tides, and in the

herring season, when the workers come in from the neighbouring district to gut and cure the fish. Wick is one of the busiest fishing ports of Great Britain. There is some shipbuilding, and the town does considerable trade in cattle. In the vicinity are the ruins of Wick Castle, known as the Old Man of Wick, a landmark for passing vessels. Pop. 7,200.

Wicken Fen. Nature reserve in Cambridgeshire, England. Six hundred acres in area, it was acquired in 1928 by the National Trust, which has preserved its natural flora and fauna for the benefits of students and others. Access is by permission only. The village of Wicken is 7 m. S.S.E. of Ely, and has a fine old church.

Wickham, ANNA. Pen-name of Edith Alice Mary Hepburn (1883-1947). English poet. Born at Sutton, Surrey, her maiden name being Harper, she was taken to Australia as a child and educated at Sydney high school. She returned to England and studied under Jean de Reszke, intending to take up a musical career. This was abandoned on marriage, and she began to write verse shortly before the First Great War. Harold Munro (*g.v.*) recognized her ability and published her first book, *The Contemplative Quarry*, in 1917, followed by *The Little Old House* in 1921. A selection of her later poems, ed. J. Galsworthy, appeared in 1936. Anna Wickham died May 1, 1947. Although her published output was small, she had a highly individual talent for brief, delicate lyrics, which owed nothing to any fashionable school of poetry.

Wicklow. Eastern maritime county of Eire. In the prov. of Leinster, it has some 36 m. of coastline, often obstructed by sandbanks; and its deep glens, valleys, and lakes have won for it the name of the garden of Ireland. From N.E. to S.W., the interior is traversed by the Wicklow Mts. (Lugnaquilla, 3,039 ft.). The chief rivers are the Liffey, Slaney, Avoca, and Vartry. Lead, copper, and other

minerals are worked, and there are valuable granite quarries. The Eire state rlys. serve the co., in which are the picturesque vales of Glendalough and Avoca. Oats and potatoes are the principal crops, while sheep, cattle, pigs, and poultry are reared. Easy accessibility from Dublin makes Wicklow usually the first county visited by tourists. Enniskerry and Glendalough are favourite holiday spots,

and Bray is the most popular bathing beach in Eire. The co.

Widgeon. Male bird of a species of British wild duck

returns three members to the Dáil. Area 782 sq. m. Pop. 60,340.

Wicklow was not made a county until 1606, for though the foothills of the mts. reach the outskirts of modern Dublin, the Irish in the mts. themselves held out longest against the English. They eventually surrendered to Cromwell without striking a blow. Black Castle was founded by the Norman invaders, but retaken by the Irish in 1301, later becoming the stronghold of the O'Tooles. The beautiful 18th century mansion of Lord Powerscourt near Enniskerry occupies the site of a fortress built by De la Poer, one of the knights who landed with Strongbow.

Wicklow. Co. town and seaside resort of Wicklow, Eire. It is situated on a hillside overlooking the mouth of the Vartry river, 28½ m. S.S.E. of Dublin. The earliest church was founded by S. Mantain, a contemporary of S. Patrick, whence the Irish name of Cill-Mantain. There are chemical works, and grain is exported. The harbour can accommodate vessels of 1,600 tons. Pop. 3,027.

Wideawake or **SOOTY TERN** (*Sterna fuliginosa*). Bird of tropical and sub-tropical seas. Its upper parts are black; face, breast, and under parts white; bill and feet black. See Ascension; Tern.

Widecombe-in-the-Moor. Village of Devon, England. It is 5 m. W.N.W. of Ashburton, on the slopes of Rippon Tor and the E. border of Dartmoor. Its fair, held on the second Tues. of Sept., has been immortalised in the ballad *Widecombe Fair*, which gave a

title to one of the most popular novels of Eden Phillpotts. At the church of S. Pancras, known locally as the cathedral of the moor, there was an occurrence believed unique on Oct. 21, 1638, when the building was struck by lightning during service and a ball of fire passed up the aisle, killing four people. Pop. 673.

Widgeon (*Anas penelope*). British wild duck. It is about 18 ins. long; and the plumage is white on the forehead, chestnut speckled with green on the cheeks and neck, greyish on the back, brown on the wings and tail, and grey beneath; the beak is blue. It occurs in winter about the shores and on inland waters, and breeds in a few localities in Scotland and Ireland.

Widin. Variant spelling of the name of the Bulgarian town entered in this Encyclopedia as Vidin.

Widmanstätten Structure. A term used in metallography to describe the microstructure obtained in some alloys when a phase is precipitated as needles or plates along crystallographic planes of a parent phase. Alois de Widmanstätten first observed the structure

Widmanstätten Structure. See text

in nickeliferous iron meteorites in 1808. The accompanying photomicrograph of a copper-base alloy shows grain boundary and Widmanstätten precipitation of a light etching phase from a dark etching phase matrix.

Widnes. Mun. bor. of Lancs, England. Situated on the N. bank of the Mersey, 12 m. S.E. of Liverpool, it is served by rlys. and connected with *Runcorn* (*g.v.*) by a transporter bridge across the river, and by the ship canal. The principal trade is

Widnes arms

in chemicals, the town being one of the chief producers of alkali in Great Britain. There are also foundries and copper-smelting, asbestos, cement, and timber works. Pop. est. 45,000.

Widor, CHARLES MARIE JEAN ALBERT (1845-1937). French composer. Born at Lyons, Feb. 22,

1845, he became organist at S. Sulpice in Paris in 1870, and 20 years later professor of the organ and of composition at the Paris conservatoire. He lived until March 12, 1937. Well-known as a music critic, he composed songs, symphonies, concertos, and piano pieces; ballets such as *La Korrigane*, 1880; and operas, of which *Les Pêcheurs de Saint Jean*, 1905, may be mentioned. But his fame rests on ten symphonies for the organ, in which the instrument is treated orchestrally.

Widow. Woman whose marriage has been terminated by the death of her husband. In England a widow whose husband died intestate is entitled to £1,000 out of his estate, all his furniture and other personal chattels, and in addition, if there are no children of the marriage, to a life interest in the rest of his property, and if there are children, to a life interest in half of it. If a widow considers that her husband's will does not make reasonable provision for her maintenance she may under the Inheritance (Family Provisions) Act of 1938 apply to the court for such provision.

Widsith (A.-S., far traveller). Anglo-Saxon poem preserved in the *Exeter Book* (q.v.). It is the narration by a scôp or gleeman of his wanderings in many parts of Europe, and of the rulers he met, and probably comprises a very early poem with later additions. A translation of it is given in *Morley's English Writers*, 1864-67.

Wied. Name of a German family. It takes its name from the county of Wied, a district on the Rhineland around Neuwied. The counts appeared about the 10th century and ruled their territory until the changes of the French Revolution. In 1784

William of Wied,
German prince

they were given the title of prince, and they continued to reside at Neuwied, which town was founded by one of them. Elizabeth, queen of Rumania, was of this family. After the Balkan Wars, when the European powers decided to give Albania a ruler, its crown was offered to her nephew Prince William of Wied (b. March 26, 1876). Taking the title of impet (mutilation of *imperator*), he reigned March 5, 1914, the outbreak of the First Great

War putting an end to his rule. With his children he adopted Rumanian nationality in 1934.

Wieland, CHRISTOPH MARTIN (1733-1813). German poet. Born Sept. 5, 1733, at Oberholzhelm, Württemberg, he studied law at Tübingen, but on visiting the learned Bodmer at Zürich in 1752, decided to devote himself to literary work. In 1760 he returned to Biberrach. Wieland translated 22 plays of Shakespeare into German, 1762-66, not very successfully, but it was the first time the task had been attempted. Then he wrote *Agathon*, 1766-67, in which he presented much of his own story; it was the first novel in which he showed himself markedly under French influence. Stories and poems followed with amazing rapidity. In 1769 he became a professor at Erfurt, and three years later tutor to the sons of the grand duchess of Saxe-Weimar, at Weimar, where he passed much of the rest of his life, and died Jan. 20, 1813.

Christoph Wieland,
German poet

Wieland was the first of the literary group that was to render that city famous; there he started *Der deutsche Merkur* (The German Mercury), 1773, a literary periodical which had considerable influence; there he became the friend of Goethe and Herder; there, besides many further stories and poems, German renderings of Cicero, Horace, and other classics, he wrote his best-known work, the epic *Oberon*, 1780, based upon the old French romance of Huon of Bordeaux, and translated into English by W. Sotheby, 1798.

Wieland, HEINRICH (b. 1877). German chemist. He was born June 4, 1877, at Pforzheim, son of a chemist, and educated there and at Munich, Berlin, and Stuttgart where he gained his Ph.D. in 1901. At Munich he was assistant professor from 1913 and simultaneously director of the organic dept. of the state chemical laboratory. In 1917 he moved to the technical university; in 1921 was at the laboratory of Freiburg; in 1925 came back to Munich as successor to Willstätter. Research work on biological oxidation, which Wieland believed to be a process of dehydration, brought him the Nobel prize for chemistry in 1927 and membership of Washington and Boston academies, and in 1931

of the Royal Society. He became editor of the *Liebig Annals*. In 1948 he resigned his chair when the Bavarian authorities made known their proposal to reorganize their laboratories.

Wieliczka. Salt mines of Poland, in Galicia, 8½ m. S.E. of Cracow, with which there is rly. connexion. There are 78 m. of passages and several chambers, some being chapels with altars and statuary, the whole carved from the rock salt.

Wien. Native name for the Austrian capital, known to the English as Vienna (q.v.).

Wien, WILHELM (1864-1928). German physicist, born at Gaffken, E. Prussia, Jan. 13, 1864. In 1890 he was appointed assistant to Helmholtz at the physico-technical institute. Subsequently he held research posts at Giessen, Würzburg, and Munich, investigating various problems connected with optics, and propounding new theories of radiation. Particularly notable was a treatise on black-body radiation, for which he received the Nobel prize for physics in 1911. He died Aug. 30, 1928. *Pron. Veen.*

Wiener Neustadt. Town of Austria, in the prov. of Lower Austria, 30 m. by rly. S. of Vienna. The famous 12th century castle of the Babenbergs was after 1752 a military academy. The town hall housed an interesting collection of antiquities. Pop. 28,789.

A rly. junction, Wiener Neustadt was made by the Germans into an industrial centre with locomotive and small arms factories, and a Messerschmitt works estimated in 1943 to be producing 400 fighters a month (a third of all German production). It was therefore the object of a number of Allied air attacks, beginning with the first raid on Austria by British or U.S. planes on Aug. 13, 1943, when U.S. bombers from N. Africa made a daylight attack on the aeroplane works; they met on this occasion only slight opposition, in what had been considered by the Germans a safe area. Later raids met much better defence. Wiener Neustadt was occupied by Marshal Tolbukhin's 3rd Ukrainian army, April 3, 1945, and after Germany's surrender came within the Russian zone of occupation in Austria.

Wieniawski, HENRI (1835-80). Polish violinist. Born at Lublin, July 10, 1835, he studied in Paris, 1845-46, gave recitals in St. Petersburg, 1848, spent another year of study in Paris, and began his successful career as a virtuoso.

touring Europe with his brother Joseph (1837-1912), a distinguished pianist. Henri taught in St. Petersburg, 1862-67, toured the U.S.A., and was professor of the violin at Brussels conservatoire, 1874-77. Despite bad health he continued to tour until his death in Moscow, March 31, 1880. He left several compositions of merit, especially two violin concertos.

Wiesbaden, Germany. The new Kurhaus and gardens

Wieringen. Town of the Netherlands, in the N.E. of the prov. of N. Holland. Formerly an island in the Zuider Zee, it was joined to the mainland by a barrage 1½ m. long, completed 1925, as the first step in the draining of that sea. The Wieringermeer polder was drained by 1930 and the barrage between Wieringen and Friesland, 18½ m. long, was completed in 1933. The new fields were inundated and many of the new farm houses in the area destroyed, when the Germans cut the dyke between the polder and the Yssel Meer in 1945. The breaches were repaired, the water pumped out, and restoration put in hand the same year; damage to fields was much less than had been feared, as the waters of the Yssel Meer were, by 1945, merely brackish, and not, like those which inundated Walcheren (*q.v.*) salt sea water. Wieringen has a fishing industry, and has become a trade centre of agricultural produce. Pop. 5,465. See illus. p. 6023.

Wiertz, Antoine Joseph (1806-65). Belgian painter. Born at Dinant, Feb. 22, 1806, he studied at Antwerp under Herreyens and Van Bru, and in Rome. The foundation of his art was a morbid mysticism, which in later years grew upon him to the exclusion of aesthetic beauty. He lived and

Antoine Wiertz,
Belgian painter
Self-portrait

died in Brussels. After his death, June 18, 1865, his house was converted into a museum of his works.

Wiesbaden. Town and spa of W. Germany, capital of the Land of Hesse. Situated in hilly surroundings, with its S. suburb Biebrich on the Rhine, 18 m. W. of Frankfurt, it used to attract 100,000 guests a year, one-fifth of them from abroad. The cure prescribed for rheumatic and similar diseases and nervous and bronchial ailments was based on 27 hot saline springs greatly aided by a pleasant climate and luxurious hotels, sanatoria, and parks. A large Kurhaus, theatre, opera house, several palaces, museums, churches, libraries, and other

public buildings (mostly modern) made Wiesbaden one of the most beautiful towns of Germany. It was founded by the Romans, of whose 3rd century fortress and famous saline baths the ruins are preserved; its name then was Aquae Mattiacae. In the 12th century it came to the Nassau dynasty, and was again a spa from 1322. Destroyed in the Thirty Years' War, 1644, it was rebuilt and again made the capital of Nassau until the duchy was annexed by Prussia in 1866. William II liked Wiesbaden as a residence. The town was under occupation by the French from 1918 to 1930. Gen. Patton's U.S. 3rd army captured it March 28, 1945; after the surrender of Germany it came within the U.S. zone of occupation. A fine palace with huge park stands near the Rhine at Biebrich. Pop. 204,170.

Wig (shortened form of *periwig*, from Fr. *perruque*). Artificial head of hair. In ancient Egypt, elaborate wigs, of which examples are preserved, were used by kings, officials, and women. They were worn by Persians, Greeks, and Romans, and were commonly used by actors. Roman ladies wore wigs of yellow hair brought from Germany. Gentlemen's wigs became popular in France under Louis XIII, who wore them to conceal his baldness. Under Louis XIV they were im-

Wig. Principal fashions in men's wigs. 1. Full-bottomed, 17th century. 2. Early Georgian, c. 1730. 3. Bob wig, c. 1750. 4. Clerical wig, c. 1830. 5. English judge's and, 6. barrister's wigs

mense, flowing over the shoulders in curls tied with ribbons. In England after 1660 they gradually became general among gentlemen. The full-bottomed wig was replaced by the smaller peruke or tie-wig, originally used in travelling and campaigning. In the latter half of the 18th century the custom of wearing wigs was slowly superseded by that of powdering the natural hair, professional men being the last to abandon the wig. In England the Speaker of the house of commons and judges wear full-bottomed wigs; barristers wear tie-wigs. Small wigs of natural hair remain in use; and the toupee and scalpette conceal partial baldness.

Wigan. County borough and market town of Lancashire, England. Standing on the Douglas, 18 m. W.N.W. of Manchester, and served by rly., it is the centre of a rich coalfield, and an important manufacturing town. Over 100 industries are concerned principally with mining, engineering, clothes, footwear, bricks, pipes, timber, oil, and brewing. All Saints is a 14th century church, there is an old grammar school, and the town hall was built in 1866. In the Civil Wars Wigan was prominent, and it saw a rising in favour of Charles II, repressed by Lüburne, 1651. It was also con-

cerned in the Jacobite risings. It sends one member to parliament. Market day, Fri. Pop. 85,357.

Wiggin, KATE DOUGLAS (1856-1923). American author, whose maiden name was Smith. Born in

Kate Douglas Wiggin, American author

Philadelphia, Sept. 28, 1856, she graduated at Abbott academy, Mass., in 1878. She brought out many successful novels, the most popular of which have been Rebecca of Sunnybrook Farm, 1903 (filmed 1932), and Penelope's Experiences in England, Scotland, and Ireland, 1898-1901. She died Aug. 24, 1923, and next year appeared her reminiscences, My Garden of Memory.

Wight, ISLE OF. Island off the S. coast of England. Separated from the mainland by the Solent and Spithead, it is 23 m. from E. to

Stretching W. from Ventnor is the Undercliff. Chines, ravines running into the land, add to the beauty of the coast. Chalk downs traverse the island from E. to W., culminating in St. Boniface Down, 785 ft. alt., and ending in Culver Cliff (E.), and the Needles (W.). Parkhurst is a small forest in the N. The chief rivers are the two Yars and the Medina.

The island, the ancient Vectis, is rich in antiquities, having been in-

habited in turn by Romans, Jutes, and Danes. At Brading is a fine Roman villa, and Roman remains have been found at Carisbrooke and elsewhere. Carisbrooke is noted for its castle. At Quarr Abbey are remains of a Benedictine house. Bonchurch and Shalfleet have Norman churches. Other edifices are Osborne House, once the residence of Queen Victoria; Farringford, where Tennyson lived; and Brook House.

Several rlys. converge on Newport. A service of steamers is maintained between Portsmouth and Ryde, Southampton and Cowes, and Lymington and Yarmouth. The island sends one member to parliament, and is divided into two hundreds, E. and W.; Medina, that river separating them. It is in the diocese of Winchester. Apart from catering for visitors, agriculture is the chief industry, the island having certain peculiar customs; and there is some fishing. The whole island was a prohibited military area 1940-45. It is protected by forts which guard the entrance to the Solent. Pop. 88,454. See Carisbrooke; Cowes; Hampshire;

Isle of Wight. Map of the island off the coast of Hampshire. Upper picture, an infra-red air view of the island; the Solent is on the left and St. Catherine's Point on the extreme right. The point projecting to the right foreground is the Needles

Osborne House. Consult England's Eden, E. Burton, 1946; Isle of Wight, A. de Selincourt, 1946.

Wightman Cup. Trophy at lawn tennis competed for annually by women amateurs representing England and the U.S.A. Mrs. Wightman played for the latter when the cup was first awarded in 1923 and held by the U.S.A. without the loss of a match. England was successful only in 1924-25-28-30, the fixtures continuing until 1939 and being revived after the Second Great War. The complete event consists of five singles and two doubles matches.

Wigmore. Village and parish of Herefordshire, England. It is 8 m. S.W. of Ludlow, and contains the ruins of a 12-14th century castle and the vestiges of an Augustinian priory founded by the

Mortimer family. The church has a Norman nave. Beautifully situated just S. is the partly black and white Wigmore Hall, dating from the 16th century.

Wigram, CLIVE WIGRAM, 1ST BARON (b. 1873). Private secretary to George V of England. He was educated at Winchester, and was commissioned in the R.A. at 20, becoming A.D.C. to Lord Elgin, then viceroy of India, two years later, and acting in a similar capacity to Curzon during 1899-1904. Military secretary to the G.O.C., Aldershot Command, 1908-10, he became assistant private secretary and equerry to the king in 1910, holding this position until 1931, when he became private secretary and later keeper of the privy purse. He was also deputy constable of Windsor Castle and keeper of the king's archives. In 1936 King George VI appointed Wigram a permanent

ficant under David II. A prehistoric stone circle is the legendary tomb of King Galdus. Pop. 1,261.

Wigtownshire or WIGTOWNSHIRE. County of Scotland. With an area of 487½ sq. m., it lies in the extreme S.W., forming part of the district of Galloway. The coast is deeply indented by Loch Ryan, Luce Bay, and Wigtown Bay. A double peninsula on the

Wigtownshire county arms

W. is known as the Rhinns of Galloway; the S.E. projection as the Machers or Machars; and the stony infertile upper district as the Moors. The coast is bold and rocky, the chief headlands being Corsewall Point, the Mull of Galloway, and Burrow Head. Towards the Ayrshire border, heights approach 1,000 ft. The chief rivers are the Cree, dividing the co. from Kirkcudbright, the Bladnoch, and the Luce.

Industries include rearing sheep, cattle, pigs, and horses, and growing oats and other crops; dairy farming is also carried on. Wigtown is the county town, other places being Portpatrick, Stranraer, and Newton Stewart. At Whithorn, S.

Ninian brought Christianity to Scotland in 397. Wigtownshire was part of the kingdom or lordship of Galloway before it was made a shire of Scotland in the 13th century, and there are many ancient fortresses. Pop. est. 31,800. See Galloway.

Wigwam (Micmac, dwelling). Name in popular use for various types of American Indian dwelling. It denotes primarily the permanent Algonquian hut, conical or beehive-shaped, formed of converging saplings and bark-covered. See American Indians.

Wilberforce, SAMUEL (1805-73). British prelate. Born at Clapham, Sept. 7, 1805, he was a son of William Wilberforce. Educated at Oriel College, Oxford, he was ordained in 1828. In 1830 he was made rector of Brighthelm, I.O.W., and in 1840 of Alverstoke. Next year he was chaplain to the prince

consort, and in 1845 was chosen bishop of Oxford. In 1869 he was translated to Winchester, and he died, the result of a fall from his

Samuel Wilberforce, British prelate

horse near Dorking, July 19, 1873. A speaker of great eloquence and remarkable for his ready wit, of which many stories are told, he excelled in reconciling, or attempting to reconcile, men of diverse opinions, hence his nickname of Soapy Sam. His energy was marvellous, and to it the Church of England owes a great deal. He published, in collaboration with his brother, the standard life of his father. One of his three sons, Ernest Roland (1840-1907), became bishop of Newcastle; another, Albert Basil Orme (1841-1916), became canon and archdeacon of Westminster. Consult Life and Selections from his Diary, A. R. Ashwell and R. G. Wilberforce, rev. ed. 1888.

Wilberforce, WILLIAM (1759-1833). British reformer. Born at Hull, Aug. 24, 1759, he was educated at Pocklington and S. John's College, Cambridge. He became M.P. for Hull in 1780, and was soon prominent both in society and in the House.

In 1784 he was returned as M.P. for Yorkshire. Wilberforce came forward as a practical Christian, and in 1788 threw his whole energy into the cause of liberating

After Sir T. Lawrence

Wigtownshire. Map of the extreme south-western county of Scotland, forming part of the district of Galloway

lord-in-waiting. Knighted in 1928, he was made a baron in 1935.

Wigston. Urban dist. and parish of Leics, England. It is 4 m. S. of Leicester, and is a junction on the rly. From its two parish churches of S. Wolstan and All Saints it is sometimes called Wigston Two Steeples. Pop. 14,530.

Wigton. Market town of Cumberland, England. It is 12 m. S.W. of Carlisle, being connected therewith by rly. and bus. There is a clothing factory, and another making transparent wrapping, while the town is an agricultural centre. Market day, Tues. Pop. 4,000.

Wigtown. Royal and mun. burgh, seaport, and co. town of Wigtownshire, Scotland. Situated on Wigtown Bay, 8 m. S. of Newton Stewart, it is served by rly. An ancient town which arose round the Saxon castle, it became signi-

Wigwam. Bark-covered dwelling of the Blackfoot Indians, in the Glacier National Park, Montana

the slaves. With Clarkson and others he carried on a vigorous agitation; he gained the support of his friend Pitt, and saw some of the fruit of his labours in the Act of 1807 which ended the slave trade. Besides abolitionist speeches, Wilberforce in 1823 drew up an appeal to the religion, justice, and humanity of the British Empire on behalf of West Indian negroes; and the bill to emancipate them completely passed its second reading a few days before his death. M.P. for Bramber, 1812-25, he died July 29, 1833. *See* Slavery; Slave Trade.

Wilcox, ELLA WHEELER (1855-1919). American versifier, whose maiden name was Wheeler. With

Ella Wheeler Wilcox,
American poet
Haines

a talent for writing the acceptable commonplace, she contributed verses to American magazines from the age of 7. Her output was enormous, and her volumes were extremely popular in Great Britain no less than in the U.S.A. She died at Shortbeach, Conn., Oct. 30, 1919.

Wild, SIR ERNEST EDWARD (1869-1934). English lawyer. Born Jan. 1, 1869, at Norwich, he was educated there

and at Jesus College, Cambridge. In 1893 he became a barrister and built up a reputation as an advocate, especially in criminal cases. He was returned in 1918 as Unionist M.P. for Upton, West Ham, and in 1921-22 actively supported the Coalition government. Made K.C. in 1912, he was knighted in 1918. In 1922 he was appointed recorder of London, a post he held until his death, Sept. 13, 1934. He was a firm supporter of the Discharged Prisoners' Aid Society. A Life, by R. J. Blackham, came out in 1935.

Wild, JONATHAN (d. 1725). An English criminal, born at Wolverhampton. He became one of the most notorious receivers of stolen

goods in London, and ruthlessly blackmailed all who came to him. He organized one of the largest bands of thieves, pickpockets, and burglars ever known. A riot which he provoked was the beginning of his downfall. He was found guilty of being concerned in stealing lace, sentenced to death, and hanged at Tyburn, May 24, 1725. Fielding wrote a satire, *History of the Life of the Late Mr. Jonathan Wild*, 1743.

Wildcat. An oil well drilled at random. Since petroleum can be detected only by drilling, all oil discoveries are by chance, but the risk is reduced if geological principles guide the siting of the boreholes. Drilling depths and costs continually increase, and the wildcat therefore is becoming rarer; but since oil is sometimes found in unexpected places, and the reward for its discovery may be great, wildcat drillings are likely to continue to be made.

Wild Duck, THE. Tragedy by Ibsen. Written in 1884, it belongs to his middle playwriting period, and has been described as burlesquing the Ibsenites; for after being acclaimed as a crusader against shams, Ibsen now appears to satirise misdirected idealism in the person of Gregers Werle, who wishes to right his father's wrongs to the family of Ekdal, but brings disaster upon them. The title is taken from a beautiful piece of symbolism sustained throughout.

Wilde, JAMES (b. 1892). Welsh boxer, who as a youth worked as a coal miner. Jimmy Wilde soon came to the front as a fly-weight. On Feb. 14, 1916, he defeated Joe Symonds in 12 rounds for the Lonsdale belt for that weight, and next year retained the title in a contest with Tancy Lee, whom he beat in 11 rounds. On March 12, 1917, he won the belt outright. After being in retirement he returned to the ring in 1923, but Pancho Villa defeated him in Wilde's last fight.

Wilde, OSCAR FINGALL O'FLAHERTIE WILLS (1856-1900). Irish writer. The son of Sir William Wilde, an ear and eye specialist, he was born in Dublin, Oct. 15, 1856. His academic career was brilliant, both at Trinity College, Dublin, where he was a friend of Edward Carson, who was later to

contribute to his downfall, and at Magdalen College, Oxford, where he gained the Newdigate prize with his poem, *Ravenna*, in 1878. Yet he was less conspicuous for these triumphs than as a leader of the cult of aestheticism; and in London, whither he proceeded with money and no occupation, his affectations, combined with genuine wit, caused him to be at once ridiculed and lionised.

Wilde's first volume of poems, 1881, attracted little attention, but a volume of fairy stories, *The Happy Prince and Other Tales*, 1888, stood on its merits as fantasy of delicacy and charm, not equalled by *The House of Pomegranates*, 1892. The Picture of Dorian Gray, his first novel, 1891, had literary brilliance, but created more attention by the decadence of its theme.

There followed four plays: *Lady Windermere's Fan*, produced at the St. James's Theatre in 1892; *A Woman of No Importance*; *An Ideal Husband*; and *The Importance of Being Earnest*, which, rightly achieving by wit and technical skill an immense success, made Wilde the leading dramatist of his day. *Salomé*, a play he wrote in French, was published with drawings by Beardsley in 1893, and performed in Paris with Bernhardt in the leading rôle, 1894.

Wilde's morals had been freely criticised, though his literary success made him accepted in society. When an open accusation of perversion was made by the marquess of Queensberry in 1895. Wilde brought an action for criminal libel, but Carson's deadly conduct of the defence revealed the truth of the allegation, and on the collapse of Wilde's case he was himself prosecuted and, after the jury had disagreed in the first trial, convicted under the provisions of the Criminal Law Amendment Act. He was sentenced to two years' imprisonment, and on his release went to live in Paris under the name of Sebastian Melmoth. There in poverty and obscurity he died, Nov. 30, 1900. He was buried in the Père Lachaise cemetery, where a bust by Epstein was erected to commemorate him.

His end was the more tragic because Wilde had shown himself a writer of great possibilities as well as a character of extreme flamboy-

ance. Though *The Ballad of Reading Gaol*, 1898, has passages of great power and beauty, and other writings are challenging and original, it is through his plays that Wilde lives, a master of paradox and the wittiest dramatist of the century. Parts of an apologetia, *De Profundis*, written in prison, were pub. in 1905, but the complete text did not appear until 1949.

Wilder, THORNTON NIVEN (b. 1897). An American novelist and dramatist. Born April 17, 1897, at

Thornton Wilder,
American novelist

Madison, Wis., he had a cosmopolitan upbringing in California, China, and Rome. During 1921-28 he was a schoolmaster in New Jersey, and during 1930-36 on the staff of Chicago university. Wilder revealed from his earliest writings a style of distinction for all its quietness; he could invest even a platitude with some poetic thought, and dealt especially well with simple characters. After *The Cabala* (1925), which was set in Rome, he gained international reputation with a brief novel, *The Bridge of San Luis Rey* (1927), which reconstructed life in 18th century Peru. Enthusiastically praised by Arnold Bennett, it also gained the Pulitzer prize, as did two plays, *Our Town* (1938), with revolutionary tricks of technique, and *The Skin of Our Teeth* (1942), an uproarious parable on the history of *Homo sapiens*. Wilder went to ancient Greece for his tale *The Woman of Andros* (1930), but returned to modern America in the rather flippant *Heaven's My Destination* (1934). In 1948 he published *The Ides of March*.

Wilderness. Any wild and desolate region. The term is specially applied to a district in N.E. Virginia, extending along the S. bank of the Rapidan from Mine Run to Chancellorsville. It became famous in the American Civil War, for here the battle of Chancellorsville was fought in May, 1863. A year later Grant conducted his Wilderness campaign, against Lee; this began in May, 1864, and was marked by a succession of battles

ending with Cold Harbor, June 1-3. (See *American Civil War*; *Chancellorsville*; *Cold Harbor*.)

The Wilderness is the name of a beautiful seaside resort in the Cape prov., S. Africa, lying E. of George and S. of the Outeniqua Mts.

Wild Hunt. Legendary aerial apparition of huntsmen and hounds. Tylor, in his *Primitive Culture*, 1871, describes it as an Aryan storm myth. Teutonic peoples have many stories of the Wild Huntsman, mostly variants of the idea of a man so devoted to the chase that he was doomed to eternal hunting. See *Herne the Hunter*; *Wandering Jew*.

Wilding, ANTHONY FREDERICK (1883-1915). British lawn tennis player. Born in New Zealand, Oct. 31, 1883, he won in 1904 the Scottish gentlemen's singles championship, and, partnered by Miss W. Longhurst, the Scottish mixed doubles. In 1907 he took the All England plate and the English covered courts championship, and, partnered by M. J. G. Ritchie, the covered courts gentlemen's doubles. He gained his first All England singles championship in 1910, and retained the title for three more years. Wilding was killed at Gallipoli, May 10, 1915.

Wildman, SIR JOHN (c. 1621-93). English intriguer. Entering the parliamentary army, he was in 1647 the spokesman of the section of the new model army that before Charles I's execution attacked Cromwell. He was imprisoned for sedition, 1648, and after his release was a leader of the Levellers, but later abandoned their cause, becoming a speculator in forfeited royalist and clerical lands. He sat in parliament, 1654, and set himself to overthrow the protector, but was again imprisoned, being released after two years. Always willing to buy safety at the expense of his fellow plotters after the Restoration he was a republican plotter, being imprisoned 1661-67. Once more the leader of a plot, 1681, he was, however, found not guilty of complicity in the Rye House plot. Wildman was Monmouth's chief agent in England, but at the last moment deserted him, fleeing to Holland, whence he returned with William. Soon suspected of intrigues with the Jacobites, he was deprived in 1691 of his post of investigator of the state trials, yet was knighted 1692. Wildman, having, as Macaulay, said, "a wonderful skill in grazing the edge of treason," died June 2, 1693. Consult J. W., Plotter and Postmaster, M. Ashley, 1947.

Wildspitze. Alpine peak of the Oetzthal group in Austrian Tirol. It is situated about 20 m. N.W. of Meran, and has an alt. of 12,470 ft.

Wildstrubel. Alpine peak of Switzerland, in the Bernese Oberland (*q.v.*), near Leukerbad or Lœche-les-Bains. It rises to an alt. of 10,676 ft.

Wilenski, REGINALD HOWARD (b. 1887). English art critic. Born in London and educated at S. Paul's school and Balliol College, Oxford, he became known by his advocacy of advanced painters, enraging the more academic writers and artists, while he disarmed them by bland and almost impenetrable logic. The *Modern Movement in Art*, 1927, was the first book in which he put forward views later elaborated in *The Meaning of Modern Sculpture*, 1932, and *The Study of Art*, 1934. *Italian Painting*, 1929; *Introduction to Dutch Art*, 1929; *French Painting*, 1931; *John Ruskin*, 1933; *English Painting*, 1933; and *Modern French Painters*, 1940, showed Wilenski to be also a vigorous critic of the older schools of art and maintained his reputation as an artistic iconoclast.

Wilfrid (c. 634-709). English prelate and saint. A Northumbrian by birth, he was educated at Lindisfarne, Rome, and Lyons, and ordained priest. At the synod of Whitby, 664, he persuaded Oswy, king of Northumbria, to submit to Rome, an episode of decisive importance in English Christianity. Consecrated bishop of York, 665, he was excluded from the see by the Anglo-Celtic party, but readmitted in 669. Wilfrid beautified York minster, and built churches at Ripon and Hexham. In 678 he began the evangelisation of the Frisians; he subsequently converted many heathen in Sussex, where miraculous stories have gathered about his name. After a litigious career he died at Oundle, probably on Oct. 3, 709, and was buried at Ripon. Wilfrid was canonised and has a festival on Oct. 12. His *Life* was written by his priest, Eddi.

Wilhelm. German form of the name William, under which two emperors are noticed.

Wilhelmina (b. 1880). Queen of the Netherlands, 1890-1948. Wilhelmina Helena Pauline Maria, daughter of William III of Orange-Nassau, king of the Netherlands, by his second wife Emma of Waldeck-Pyrmont, was born at The Hague, Aug. 31, 1880, and, her father's two sons by his first marriage dying in 1879 and 1884,

she succeeded him on his death Nov. 23, 1890. Queen Emma acted as regent until the princess's 18th birthday, Aug. 31, 1898; Wilhelmina was enthroned on Sept. 6. She married Henry, duke of Mecklenburg-Schwerin, Feb. 8, 1901, and by him had a daughter Juliana (b. April 30, 1909).

Wilhelmina
of the Netherlands

A person of simple tastes and strong Protestant convictions, Wilhelmina lived a quiet life, chiefly in The Hague (where she was often to be seen riding through the streets on her bicycle) until the invasion of her country by the Germans in 1940. She had brought the Netherlands safely through the First Great War as a neutral, and had hoped, having failed in a joint attempt with King Leopold to prevent the Second, to maintain neutrality again. But her country was attacked and overrun. She herself, much against her will at the time, was persuaded to remove in a British warship to England, where she lived in London or its environs as effective head of the Dutch govt. in exile. She broadcast on many occasions from London to her people, to all of whom, R.C. and Protestant alike, she became a symbol of liberation.

She returned to the Netherlands immediately after its liberation in May, 1945. Failing health led her to abdicate Sept. 4, 1948, four days after the celebration of her golden jubilee, in favour of her daughter. She retired into private life as the princess of the Netherlands. *Consult* Queen Wilhelmina, Mother of the Netherlands, P. Paneth, 1944.

Wilhelm Meister. Novel by Goethe (*q.v.*), published in two parts, the *Lehrjahre* or Apprenticeship (1795-96), and the *Wanderjahre* or Travels (1821-29). It traces the history of its hero in a philosophising, discursive, and tedious fashion.

Wilhelmshaven. Seaport and town of Germany. It lies in Jade Bay on the North Sea coast, 41 m. N.W. of Bremen. Bought by Prussia from Oldenburg, it was constructed 1854-69 as Germany's main naval port; exploited under the Weimar govt. as a commercial port; again fortified by the Nazis. It was an impressive, pleasant town, connected with the Frisian islands, Heligoland, and Bremerhaven by steamer; it had a fine town hall and churches in modern brickwork, a museum and naval arsenal, shipyards and engineering plants, and was a resort for about 12,000 visitors a year.

Base of the German North Sea fleet, Wilhelmshaven was frequently and heavily attacked from the air during the Second Great War, being first raided by the R.A.F. on Sept. 4, 1939. The Polish armoured div., attached to the Canadian 1st army, entered Wilhelmshaven, May 7, 1945. After the surrender of Germany it lay in the British zone of occupation, and demolition of docks, ammunition depots, workshops, and wharves was carried out. By the end of 1948 the port had been demilitarised. Some 140 small industries were introduced to employ not only the townspeople, 28,000 in 1939, but also many refugees. In 1947 the Max Planck research institute for oceanology was erected here. Pop. 102,000.

Wilhelmstrasse. Thoroughfare in Berlin. Before its destruction in the battle for Berlin in 1945, it

was one of the most representative streets of the city, 1½ m. long, containing the former palace of the president, the foreign office, and the Reich chancellery. As Quai d'Orsay outside France and Whitehall outside the U.K. stood for the French and British foreign offices respectively, the Wilhelmstrasse outside Germany stood for the German foreign office.

Wilkes, JOHN (1727-97). English politician. Born at Clerkenwell, London, Oct. 17, 1727, son of a malt distiller, he was educated at Leyden. He became known in London as a leader of the profligate *Medmenham Brotherhood*. By Pitt's influence he was

John Wilkes,
British politician

chosen in 1757 M.P. for Aylesbury, and at once proved a thorn in the Tory side. In 1762, with the support of the Whig group led by Temple, he started *The North Briton*, launching vitriolic but witty attacks on the premier, Bute, which helped to bring him down. In No. 45 next year Wilkes described the king's speech as false; by general warrant he was arrested, put in the Tower, but released on the order of Chief Justice Pratt on the ground of breach of privilege. Now was raised the popular cry of Wilkes and Liberty! For a partly printed *Essay on Woman*, Wilkes was pronounced by the house of lords guilty of libel; he fled to the Continent and was outlawed.

Returning in 1768, he was elected M.P. for Middlesex; he was imprisoned and three times expelled from the commons. But he gained enormous influence with the London merchants and the mob, and was chosen lord mayor in 1774. That year at last he was admitted to parliament, where he advocated abolition of rotten boroughs and extension of the franchise, and championed the American colonists, probably inciting them to rebellion. City chamberlain from 1779, he withdrew from parliament in 1790, and died, insolvent as he had mostly lived, Dec. 26, 1797.

Wilkes was an ugly, malicious, and obscene debauchee, who was said never to do a good thing without a bad reason. But he stood out with conspicuous courage and honesty for freedom in speech and print, attacked

Wilhelmshaven, Germany. Plan of the harbour and quays of this former important German naval port

corruption and pettiness in politics, and was eminently trustworthy in office. His constitutional importance is great, for he sounded the death-knell of general warrants, showed that the press could not be muzzled, and established that the govt. could not keep out of parliament an elected representative.

Bibliography. Correspondence, ed. 1805; John Wilkes, H. Bleakley, 1917; Life, O. A. Sherrard, 1930; That Devil Wilkes, R. Postgate, 1930; Four Portraits, P. Quennell, 1945.

Wilkes-Barre. City of Pennsylvania, U.S.A., the co. seat of Luzerne co. It stands on the North branch of the Susquehanna river, 16 m. S.W. of Scranton, and is served by the Lehigh Valley and other rlys. In the centre of a productive anthracite region, its manufactures include machine-shop and foundry products. More than one-third of all the anthracite mined in the U.S. is marketed here. First settled in 1769, Wilkes-Barre was incorporated as a borough in 1806, and became a city in 1871. Pop. 86,236.

Wilkie, Sir David (1785-1841). Scottish painter. Born at Culter, Fife, Nov. 18, 1785, Wilkie was the son of the parish minister. After some schooling near home, he began to study art at the Trustees' Academy, Edinburgh.

Having worked at home on his earliest pictures, he moved to London and entered the R.A. schools. His success was rapid and great. The Village Politicians was followed by The Blind Fiddler, 1807; The Rent Day, 1807; Blind Man's Buff, 1813; The Letter of Introduction, 1814; Distraint for Rent, 1816; The Penny Wedding, 1819; and Reading a Will, 1821. He was elected A.R.A. in 1809, and R.A. in 1811. After a tour in Europe, made in 1825-28, Wilkie's style changed entirely, an example of his later work being The Queen's First Council. He was returning home from a voyage when he died, off Gibraltar, June 1, 1841. He had been a knight since 1836.

The most popular of Wilkie's many works are those of homely Scottish life. He also painted portraits, and his visits to Paris, Italy, and Spain were followed by productions of work in the style of

the great masters, e.g. Two Spanish Monks of Toledo. Two other popular pictures may be mentioned, John Knox Preaching before the Lords of the Congregation, and The Chelsea Pensioners. See Knox, John; consult also Lives, A. Cunningham, 1843; J. W. Mollett, 1881; E. Pinnington, 1900; Lord R. Gower, 1902.

Wilkins, Sir (George) Hubert (b. 1888). Australian explorer. Born at Mount Bryan East, South Australia, Oct. 31, 1888, and educated at the Adelaide school of mines, he acted as photographic correspondent with the Turkish army in the Balkan War, 1912-13. He was photographer to Stefansson's Canadian Arctic expedition, 1913-17, subsequently serving in the Australian flying corps during the First Great War. In 1919 he acted as navigator in the Blackburn Kangaroo aeroplane on a flight from England to Australia. Thereafter he participated in a number of Arctic and Antarctic adventures, which included the British Imperial Antarctic expedition, 1920-21; Shackleton-Rowett expedition, 1921-22; the Detroit Arctic expedition, 1926-27; and the Nautilus Arctic submarine expedition, 1931. These exploits brought him world fame, and he was knighted in 1928. He was manager of the Ellsworth trans-Antarctic expeditions between 1933 and 1939. Sir Hubert's books included Flying the Arctic, 1928, and Under the North Pole, 1931.

Wilkins, John (1614-72). An English divine. Born at Fawsley, Northamptonshire, he was educated at Magdalen Hall, Oxford. In 1648, having been vicar of Fawsley since 1637, Wilkins was chosen warden of Wadham College, Oxford. In 1659 he became

master of Trinity College, Cambridge, but lost the position at the Restoration (1660). However, he afterwards held livings in Middlesex, London, and Northamptonshire, and in 1668 was elected bishop of Chester. He died in London, Nov. 19, 1672. Wilkins wrote a number of scientific books, but is best known as one of the founders and the first secretary of the Royal Society. Consult Life and Times, P. A. Wright Henderson, 1910.

Wilkinson, Ellen Cicely (1891-1947). British politician. She was born in Manchester, Oct. 8, 1891, the daughter of a cotton operative. From an elementary school she went, by the aid of scholarships, to a Manchester secondary school and Manchester university. For a time a teacher, "Red Ellen" (so called from her flaming red hair) turned to journalism and politics, and soon became widely known in the Labour movement. Becoming a member of the Communist party in 1920, she was Labour candidate for Ashton-under-Lyne in 1923. Membership of both parties being declared incompatible by the Labour party, she gave up her allegiance to the Communists.

Ellen Wilkinson,
British politician

In 1924 she stood as the successful Labour candidate for Middlesbrough E., which she represented until 1931. A forceful speaker, she did valuable work as a trade union organizer. She came back to parliament in 1935 as member for Jarrow, and did much to bring to notice the tragic results of large-scale unemployment in that town. In 1941 she joined the coalition govt. as parl. secretary to the ministry of Pensions, being transferred later to the ministry of Home Security, where she played a large part in the development of air raid shelters and other aspects of civil defence. After the general election of 1945 she became minister of Education, developing plans already in train under the Education Act of 1944. On Feb. 6, 1947, she died of heart failure in hospital in London.

Wilkinson, James John Garth (1812-99). English writer. He was born in London, June 3, 1812, was early attracted by William Blake, and at first wrote poetry, which was much influenced by Blake. After 1839 he devoted himself to the elucidation of the works of Swedenborg, acquiring a wide reputation and attracting the attention of Henry James the elder, Emerson, Carlyle, and Dickens. He travelled considerably in Scandinavia and Iceland, visited America, and finally settled in London, where he died, Oct. 18, 1899. Wilkinson was himself a mystic, and to this fact is perhaps due his astonishing insight into Swedenborgian thought. The

vigour and the clarity of his writing did much to spread that doctrine, and won for him an eminent position among members of the New Church. His chief works are the standard biography of Swedenborg, 1849, and the mystical poems, Improvisations from the Spirit, 1857.

Wilkinson, NORMAN (b. 1878). British painter. Born at Cambridge, Nov. 24, 1878, he was educated at Berkhamsted. He became widely known as a marine painter, his work being remarkable for its accuracy and clarity of outline and detail. During the First Great War he served in the R.N.V.R., when he evolved the dazzle system of camouflage against submarine attack. He later became well known as a poster artist. Many of his colour sketches and paintings are in the Imperial War Museum, and in 1944 he presented to the nation 54 pictures of war at sea.

Will. Conscious psychical activity or tendency towards action, usually classed with cognition and feeling as one of the three mental factors. It may be exercised both outwardly and inwardly, according as the aim or result is a bodily movement or a purely psychical process. Three elements are necessary: the existence of motive, or desire directed towards an object: of reflexion, consideration of the desirability and attainability of the object; and of resolution, the idea of power to realize the object.

Will is variously defined as a mental representation of the act followed by a performance of it, a presentation transformed; a mere complex of sensations arranged in a particular way; an innate spontaneity of consciousness, manifested when determined by a feeling of pleasure and pain; a blind, unreasoning force, exercising its activity not only in animate beings, but throughout nature. The most generally accepted view, however, is voluntarism, which lays more stress on volition than on intellect. See Free Will; Predestination.

Will. In law, the legal instrument whereby a man declares what is to be done with his property after his death. By English law every will except that of a sailor at sea, or a soldier or sailor on active service, must be in writing or its equivalent. It must be signed by the testator in the presence of two witnesses both present at the same time, who must in his presence sign as witnesses. In

Scotland, and most other countries, a will signed by the testator, and written entirely by him with his own hand, is good without witnesses; but other wills must be witnessed, in some countries, by a notary public. A will made by a British subject abroad is valid in the United Kingdom if it is made according to English form (by an Englishman) or Scottish form (by a Scotsman). A will made abroad by a foreigner will not be recognized in England unless validly made according to the law of the country where it was executed.

Willamette. River of Oregon, U.S.A. Formed by the union of Middle Fork and McKenzie Fork, both rising in the Cascade range, it flows N. to the Columbia river, which it enters a few miles below Portland. Its course of 250 m. lies through a valley of great fertility. See Meteorite.

Willard, EDWARD SMITH (1853-1915). British actor. Born Jan. 9, 1853, he made his first appearance on the stage at Weymouth, Dec. 26, 1869, and won his earliest London successes as Spider in *The Silver King*, at *The Princess's*, 1882, and James Ralston in *Jim the Penman*, at *The Haymarket*, 1886. Manager of the Shaftesbury Theatre, 1889-90, his season was memorable for his powerful portrayal of Cyrus Blenkarn in H. A. Jones's drama *The Middleman*, and of Judah Llewellyn in *Judah*, by the same author. Willard died Nov. 9, 1915. His nephew Edmund (b. 1884), also an actor, usually played heavy or villainous characters.

Willard, FRANCES ELIZABETH (1839-98). American educationist and reformer. Born at Churchville, N.Y., Sept. 28, 1839, and educated at the North-Western female college at Evanston, Ill., she was a teacher in Pittsburgh female college 1856-66 and principal of the Genesee Wesleyan seminary at Lima, N.Y., 1866-67. In 1874 she became secretary of the national woman's Christian temperance union, of which she was president from 1879. In 1883 she founded the world's woman's Christian temperance union, becoming president in 1888. She took the chair at the women's national council in 1890. She died in New York, Feb. 18, 1898.

Frances Willard,
American
educationist

Willcocks, SIR WILLIAM (1852-1932). British engineer. Born in India and educated at Roorkee College, he was engineer to the Indian public works, 1872-83, transferring to the Egyptian public works until 1897. In 1898 he planned the great dam at Assuan, and in 1911 a vast scheme of irrigation for Mesopotamia (Iraq), by which some 3½ million acres were watered. Made K.C.M.G. in 1902, he wrote *Egyptian Irrigation*, 1899; *The Assuan Reservoir and Lake Moeris*, 1904; *The Irrigation of Mesopotamia*, 1911. He lived until July 28, 1932.

Willemite. An ore mineral of zinc, zinc silicate. It is found at Franklin Furnace, N.J., in Belgium, and elsewhere, associated with other zinc minerals.

Willemstad. Capital of Curaçao (*q.v.*) and of the Netherlands Antilles. Founded soon after Dutch occupation of the island of Curaçao in 1634, Willemstad (William's town, after the second William of Orange) resembles a Dutch 17th century town with its gabled houses. The older part, called Punda (Du. Poenda), to the E. of St. Ann's Bay, is joined to the newer part Otrabanda, or Overzidje (other side), by a pontoon bridge. The synagogue, built 1732, a replica of that in Amsterdam, is the oldest in the W. hemisphere. At Willemstad is the seat of justice for the Netherlands Antilles. Variations between day and night temp. are greater than the annual range, which is from 83°3' F. in Sept. to 78°4' F. in Jan.

On the W. coast of the island, Willemstad has one of the finest harbours in the West Indies, consisting of a long narrow channel (St. Ann's Bay) broadening to a large land-locked bay (Schottegat), with water deep enough for the largest liners. Formerly exporting chiefly sugar and tobacco, Willemstad became the seat of the second largest oil refinery in the world, established 1925, for the treatment of oil from Venezuela. Of the 10,000 ships totalling 40,000,000 tons which entered the harbour in 1941, 4,000 totalling 15,000,000 tons were tankers. The importance of the oil refinery here led to the garrisoning of Willemstad after the German occupation of the Netherlands, first by British troops, May 11, 1940, to Jan. 12, 1942, then by U.S. troops. During Jan., 1942, a German submarine attempted to shell the refinery. Pop. 39,678.

Willenhall. Urban dist. and town of Staffs, England. Standing 3 m. E. of Wolverhampton on the

ry., it is a manufacturing centre turning out locks, keys, bolts, and general hardware. Pop. est. 30,370.

Willesden. Borough of Middlesex, England, and a N.W. suburb of London. It includes Brondesbury, Harlesden, Neasden, Kilburn, Kensal Rise, and Cricklewood. Here is an important rly. junction, and the dist. is served by underground rly., bus, and trolley bus. The ancient parish church of S. Mary, a place of pilgrimage in the middle ages, restored 1852 and 1872, contains remains of Norman work. Charles Reade was buried in the churchyard. Large industrial developments took place in the 1930s (see Park Royal). Willesden returns two members to parliament. Pop. est. 180,770.

Willett, WILLIAM (1856-1915). British promoter of daylight saving. Born at Farnham, he became

William Willett,
British builder

a builder and was head of a London firm bearing his name which put up many houses in Kensington. His tireless advocacy of "daylight saving" led to the introduction in 1908 of the unsuccessful first Daylight Saving bill, and it is by this scheme that he is remembered, although he died March 4, 1915, a year before it was actually introduced into the U.K. Petts Wood, Chislehurst, was acquired 1927 and presented to the National Trust as a memorial to Willett. See Summer Time.

William, I. Masculine Christian name. It means helmet of resolution. In the form Guillaume it is of French origin, and was brought into England by William the Conqueror. The German form is Wilhelm. The feminine is Wilhelmina.

William I (1027-87). King of England, surnamed the Conqueror. He was the illegitimate son of the Norman duke Robert, called the Devil, by Arletta, daughter of a tanner in Falaise (q.v.). Hence William was called by his enemies the Tanner or the Bastard. Despite the irregularity of his birth, the boy's succession as duke of Normandy was recognized by the barons in 1035. In 1047 he defeated a faction at Val-ès-Dunes. Visiting England, he was said to have obtained from Edward the Confessor and Harold Godwinson promises that he should succeed Edward on the throne of England. When Harold himself accepted the

crown in Jan., 1066, in violation of an oath taken upon particularly

William I,
King of England

sacred relics, William prepared a great expedition against the "perjurer," landed at Pevensey, and slew Harold at the battle of Hastings (q.v.), Oct. 14. The magnates assembled in London, acting as the Witenagemot (q.v.), offered William the crown in Westminster abbey at Christmas.

Quickly rebellions in the N. and W. provided excuse for huge forfeitures, while stone castles, with royal garrisons, rose at strategic points all over the country. An insurrection in the N., supported by a fleet from Denmark in 1069, was ruthlessly quelled. Hereward the Wake was put down in E. Anglia. After 1072 William spent most of his time in Normandy. His archbishop, Lanfranc, organized the discipline of the English Church, and with William preserved the independence of Church and crown from papal domination. Besides bringing in a measure of feudalism, William made use of the Saxon system of local jurisdiction. Compilation of Domesday Book (q.v.) was ordered in 1085. The king was thrown from his horse after sacking Mantes, and died at Rouen, Sept 9, 1087. He was a fine soldier and a great administrator, not notably cruel by the standard of his age.

Bibliography. History of the Norman Conquest, E. A. Freeman, 1867-99; Lives, Freeman, 1888; H. Belloc, 1933; P. Russell, 1933; a novel, The Acquirer, M. Coryn, 1934.

William II (c. 1056-1100). King of England, called Rufus or the Red King. The second surviving son of William the Conqueror, he was nominated to the English succession by his father, his elder brother Robert succeeding to Normandy. When William became king in 1087, the Norman barons revolted in favour of Robert, but were crushed by William, who received ready aid from the English. He proved a godless and greedy tyrant. He was killed by an arrow while hunting in the New Forest,

William II,
King of England

Aug. 2, 1100. Consult The Reign of Rufus and Accession of Henry I, E. A. Freeman, 1882.

William III (1650-1702). King of Great Britain and Ireland, and stadtholder of Holland. He was

born at The Hague, Nov. 4, 1650, eight days after the death of his father, William II, prince of Orange and stadtholder.

His mother was Mary, daughter of Charles I, so that he was heir

William R
After Netscher

to the English throne after the children of the future James II. The Republicans secured ascendancy in the Netherlands, and the house of Orange was set aside. But when France and England attacked Holland, 1672, promising an Orange restoration, William's partisans murdered the De Witts, unreprieved by the youth who was raised to the stadtholdership.

He became a hero in his country's eyes for desperate bravery in resistance to Louis XIV. A bad general, he was defeated by Condé at Seneffe in 1674 and at St. Omer in 1677; but diplomacy secured the aid of Brandenburg, Austria, and Spain. His marriage to Mary Stuart in 1677 was a triumph, and Louis was compelled to conclude the peace of Nijmegen. By 1688 the league of Augsburg, later to form the nucleus of the Grand Alliance (q.v.), was in being. Events in England had been watched by William with close attention, and he cultivated the interest of the growing opposition to James. When the crisis came to a head he accepted an invitation to "bring over an army and secure the infringed liberties" of England. He landed at Torbay, Nov. 5, 1688; James fled; and William, having accepted the Declaration of Rights, was declared joint sovereign with Mary, Feb. 13, 1689.

He was never popular in England; in Scotland the massacre of Glencoe remains the greatest blot on his name; Ireland declared for James, who was defeated at the battle of the Boyne (q.v.), July 1, 1690, William's only victory; the treaty of Limerick was called treachery by the Irish.

Meanwhile the war on the Continent had broken out again; William lost Namur, was routed

at Steinkirk and Neerwinden, but never despaired, and his brilliant diplomacy secured favourable terms at the peace of Ryswick, 1697. But when Charles II of Spain left all his dominions to the grandson of Louis XIV, William's work was undone, and war became inevitable before he died, March 8, 1702, as the result of a fall from his horse, which tripped over a mole-hill. The way in which William died led Jacobites to toast the "little gentleman in the velvet jacket."

William's immense difficulties at home and abroad embittered his naturally sullen character. Contempt for the panoply of kingship, and abhorrence of gaiety, further undermined his popularity. But he was respected and acclaimed as a champion. William had one ruling passion, the prevention of French aggrandisement, and to that task he gave himself with a selflessness which alone made tolerable the enormous demands upon his English and Dutch kingdoms. He made up in statecraft what he lacked in other qualities. *See* Kensington Palace illus.; Petersfield.

Bibliography. Life, H. D. Traill, 1888; Burnet's History of My Own Time, new ed. 1897; W. of O. and the English Revolution, J. Appleyard, 1908; Macaulay's History of England, new ed. 1913-15; W. III and the Defence of Holland, M. C. Trevelyan, 1930; W. of O., G. J. Renier, 1932.

William IV (1765-1837). King of Great Britain and Ireland. Third son of George III, he was born at Buckingham Palace, Aug. 21, 1765. Warmly attached to the navy, in which he served 1779-90, he enjoyed some popularity as the sailor prince, being also duke of Clarence. He was lord high admiral in 1827. The lover of Dorothy Jordan, the actress, he married in 1818 Adelaide of Saxe-Meiningen. On his accession in 1830 he was regarded as a supporter of the Whigs. William favoured the Reform Bill, but only with extreme reluctance did he promise, if called upon, to create enough peers to secure its passage through the lords. Except for dismissing Melbourne in favour of Peel, 1834, he took no further political action. He died June 20,

1837. *See* Reform Acts. *Consult* Life and Times, P. H. Fitzgerald, 1884; The Patriot King, G. E. Thompson, 1932.

William I (1797-1888). German emperor and king of Prussia. He was born March 22, 1797, second son of Frederick William III of Prussia, and was a soldier from youth, fighting in the last Napoleonic campaign. Driven from Prussia by the democratic movement of 1848, on its

William I,
German emperor

failure he resumed his former position. Field-marshal from 1854, he became regent during the illness of his brother, Frederick William IV, in 1858, and succeeded to the throne Jan. 2, 1861. William found in Bismarck (*q.v.*) a statesman prepared to harness the law to the service of ambitious designs, and from 1862 let him control the state. The king was Bismarck's instrument in the complications which issued in the Franco-Prussian War, sending to him the Ems Telegram (*q.v.*). At Versailles, during the siege of Paris, he was proclaimed the first German emperor, Jan. 18, 1871. William died March 9, 1888. He married Augusta of Saxe-Weimar, and his children were his successor, Frederick, and Louise, grand duchess of Baden. *See* Bismarck; Germany; Hohenzollern. *Consult* The Emperor William, E. Simon, 1886; Life, A. Forbes, 1888; Life and Times, P. Wiegler, Eng. trans. 1929.

William II (1859-1941). German emperor and king of Prussia, 1888-1918. Born in Berlin, Jan. 27, 1859, he was the eldest son of Frederick, afterwards German emperor, and his wife Victoria, daughter of Queen Victoria. He was baptized Friedrich Wilhelm Victor Albrecht, and after a spell of private tuition was sent to Cassel and then to Bonn. In 1881 he married Augusta Victoria of Schleswig-Holstein.

On June 15, 1888, William succeeded his father as king and emperor, and for 30 years was one of the foremost figures in Europe, especially after 1890, when he dismissed Bismarck and became himself the director of Germany's policy. His restless energy led him to make spectacular tours, such as the one to the Holy Land in 1898, to rush to London and other capitals and discuss affairs of state

with sovereigns and statesmen, and to make himself noticeable by martial speeches to his troops. At one time he seemed sincerely anxious to keep the peace; at others determined to cause trouble. He was consistent, however, in his efforts to give Germany a "place in the sun," to maintain her army, extend her colonial empire, foster her trade, and make her heard, if not always respected, on all questions of international politics. He supported the idea of a great German navy, but above all, with the army as the main support of his throne, believed that he ruled by divine right.

The clash of German and British interests in Africa; his attitude in the Sino-Japanese war of 1894 and towards the S. African War; his notorious telegram to Kruger in 1896; his crude Morocco land-

break of the First Great War; right, in his later years

ing in 1905; his consent to the sending of the gunboat Panther to Agadir in 1911—all these things helped to increase tension in Europe. Yet though his turbulent foreign policy was always directed by the desire for German expansion, he appeared to believe that peace could be maintained by the power of German weapons. Even in 1914 he believed that war could be averted and manoeuvred to avoid it; yet he must be held largely responsible for the conditions of strain that finally produced the explosion. Throughout the First Great War popular opinion in Great Britain found in "the kaiser" the prime culprit. During its course, as nominal commander-in-chief, he fitted from place to place in the battle areas. Believing that Germany would yet triumph, he refused to read the signs pointing to her downfall in the autumn of 1918. When told that his cause was hopeless he reluctantly abdicated on Nov. 9, and fled ignominiously into Holland, where the castle of Doorn was later granted to him for his residence.

The treaty of peace declared the ex-kaiser a criminal, and arrange-

William IV,
King of Great
Britain
From a miniature

ments were made for his trial in London. On Jan. 16, 1920, his extradition was formally demanded, but it was refused by the Dutch, and for the rest of his life he lived in retirement at Doorn. His wife died in 1921, having borne six sons and a daughter. In 1922 he married Princess Hermine von Schönaich-Carolath (née Reuss). He died June 4, 1941. His second wife survived until Aug. 7, 1947. The ex-kaiser's defence of his career and policy was translated into English as *Comparative Historical Tabulations from 1878 to the Outbreak of War in 1914*. See Agadir; Germany; Hohenzollern. *Consult* The German Emperor, C. Lowe, 1895; The Kaiser in Exile, Lady Norah Bentinck, 1921; William II, E. Ludwig, 1926; Fabulous Monster, J. D. Chamier, 1934.

William, PRINCE OF ORANGE (1533-84). Dutch soldier and statesman, called the Silent because, although in fact talkative, he could keep his own counsel about matters of moment. Eldest son of William, prince of Nassau, he was born at Dillenburg, April 25, 1533, and in 1544 inherited the title of prince of Orange. His wealth and position made him important, and he was brought up in the R.C. faith at the court

of Charles V at Brussels, where he was one of the emperor's closest friends. He served Charles as a diplomatist, and was one in 1559 at Cateau-Cambrésis, where

William the Silent
After J. van Mierevelt

it was that he first earned his famous nickname.

Soon after 1555, when Philip II became ruler of the Netherlands, William took his stand among the nobles who protested against the tyranny of Alva, while about the same time his religious opinions became Calvinist. Treasonable actions in preparing a revolt led to his outlawry in Germany. When the revolt began in 1572 he was its leader and he acted as such until his end. Fifteen provinces formed a league of which William was chief. Philip set a price on his head, and after several unsuccessful attempts, he was shot and killed by Balthasar Gerard at Delft, July 10, 1584. Married four times, William left three sons. The eldest had been removed to Spain, and he was succeeded by Maurice,

the second. *Consult* Revolt of the Netherlands, P. Geyl, 1932; William the Silent, C. V. Wedgwood, 1944.

William (b. 1941). British prince. The eldest son of Henry, duke of Gloucester, he was born Dec. 18, 1941, and christened William Henry Andrew Frederick.

William. Schoolboy hero of novels and short stories by Richmal Crompton. Originally appearing in *Just William*, 1922, William Brown does everything with the best intention and usually the worst result. His family—father, mother, and sister Ethel; his friends, headed by Ginger and Violet Elizabeth; and Hubert Lane, with whom William carries on a feud, all became popular characters, and like William himself were transferred with great success to screen, stage, and radio, the first broadcast of a long series being made in 1945.

William of Wykeham (1324-1404). English prelate. Born at Wickham, near Fareham, and educated at the old grammar school at Winchester, he attracted the notice of Edward III, who made him chaplain in 1349 and in 1356 appointed

William of Wykeham,
English prelate

him the surveyor of works at Windsor. Here he built much of the castle. His career was extraordinarily successful; between 1359 and 1361 he held no fewer than 19 canonries and other ecclesiastical offices which led to the bishopric of Winchester and the lord chancellorship, both in 1367. Having resigned the chancellorship in 1371, he was impeached and deprived of his emoluments. On the accession of Richard II, 1377, Wykeham received a full pardon and was reinstated in his bishopric. He was again lord chancellor, 1389-91, and he died at Waltham, Hants, Sept. 27, 1404. William of Wykeham will always be remembered as the founder of colleges at Winchester and Oxford. He was the leading advocate of Perpendicular architecture, and exceptionally honest for a medieval administrator. His *Life* was written by G. H. Moberly, 1893; G. C. Heseltine, 1932. See *New College*; Winchester College.

Williams, ALFRED OWEN (1877-1930). British poet. A carpenter's son, he was born at

Alfred Williams,
British poet

South Marston, Wilts., Feb. 7, 1877. He became a farm worker when 11, a rivet boy at the Swindon works of the then G.W.R. when 14, and was later a head forgerman and stamper. In spare time he learned Greek and Latin, and in 1909 published *Songs in Wiltshire*. His other works include *Poems in Wiltshire*, 1911; *War Sonnets and Songs*, and *Life in a Railway Factory*, 1915. Later he taught himself Sanskrit, and published translations from that language. Selected *Poems* appeared in 1926. Williams died in extreme poverty, April 10, 1930. *Consult* *Lives*, H. Byett, 1933; L. Clack, 1945.

Williams, BRANSBY (b. 1870). British actor, born Aug. 14, 1870. He left a commercial career for the stage in 1896 and made his name as an impersonator of popular actors. He appeared at the principal London music halls with studies of characters from Dickens. In 1922 he produced *David Copperfield* at Brixton, doubling the parts of Micawber and Peggotty, and next year played *Hamlet* at Birmingham. Williams also acted in films, notably *Soldiers of the King*, 1933.

Bransby Williams,
British actor

Williams, CHARLES WALTER STANSBY (1886-1945). British writer. Born Sept. 20, 1886, he was educated at St. Albans and London university. His unusually varied work embraced poetry, poetic drama, biography, criticism, and novels. The poetry, beginning with *The Silver Stair*, 1912, was often obscure and had a limited appeal, but some novels with a supernatural element, conceived on broad Miltonic themes, were widely read: *War in Heaven*, 1930; *Many Dimensions*, 1931; *The Place of the Lion*, 1931; *The Greater Triumphs*, 1932; *All Hallows Eve*, 1944. Williams understood mystical experience and showed insight into the problem of good and evil. A poetic drama about Cranmer was performed at Canterbury in 1936. The figure of Beatrixe was a study of Dante. Williams wrote an

introduction to Milton's poems and edited those of Hopkins. He died May 15, 1945.

Williams, DAVID (1738-1816). Founder of the Royal Literary Fund (*q.v.*). Born at Watford,

David Williams,
founder of the R.L.F.
From a silhouette

Glam, he was trained as a dissenting minister, but after officiating at Frome, Exeter, and Highgate, he opened in 1776 a chapel in Margaret Street, London, on an avowedly deistic principles. He also engaged in educational

work, and was a prolific writer on political and religious subjects. It was at a club in Chelsea that he first broached the idea of a society for the relief of distressed authors; and the Royal Literary Fund was started on his initiative in 1788. A friend of Garrick, Goldsmith, and Johnson, Williams died June 29, 1816.

Williams, EMLYN (b. 1905). Welsh man of the theatre. He was born at Mostyn, Flintshire,

Emlyn Williams,
Welsh actor and
playwright

Nov. 16, 1905, and went from Holywell county school to a brilliant career as a linguist at Christ Church, Oxford. His London debut was on April 4, 1927, in *And So To Bed*, with

which piece he went to New York the same year. His own first play was *Glamour*, 1928. Williams rose to equal eminence as playwright, producer, and actor, often simultaneously; while he translated or adapted foreign plays and wrote film dialogue. The parts of Angelo, in *On the Spot*, and Lord Lebanon (his favourite), in *The Case of the Frightened Lady*, made his name. His *Richard III* was talked of in 1937, and his barrister in *The Winslow Boy*, 1946, was an awe-inspiring figure. Critics differed in their ranking order of Williams's original and varied dramatic experiments, but mention must be made of *A Murder Has Been Arranged*, 1930, and *Night Must Fall*, 1935, thrillers in which the murderer was known to the audience; *The Corn Is Green*,

1938, the partly autobiographical story of a poor boy gaining an Oxford scholarship; *The Light of Heart*, 1940, melodrama that was really moving; *The Wind of Heaven*, 1945, a study of religious revivalism in Wales; *Trespas*, 1947, an essay in the occult.

Williams, SIR GEORGE (1821-1905). Founder of the Y.M.C.A. He was born at Dulverton, Oct. 11,

Sir George Williams,
founder of Y.M.C.A.

1821, and in 1841 became an assistant in the drapery house of Hitchcock & Co., St. Paul's Churchyard, London. He arranged prayer meetings among his fellow employ-

ees, and in 1844, with eleven other young men, founded the Young Men's Christian Association (*q.v.*). Williams became treasurer in 1863 and president in 1886. Knighted in 1894, he died at Torquay, Nov. 6, 1905. *Consult* Life, J. E. Hodder Williams, 1918.

Williams, JOHN (1796-1839). British missionary. Born at Tottenham, June 29, 1796, he was

sent by the London Missionary Society in 1816 to the Society Islands. Here and in the neighbouring islands he did excellent work until murdered by cannibals in Erromanga, Nov. 20, 1839. He started schools, wrote text-books, translated the N.T. into native tongues, and in 1837 issued an account of his enterprises. Six successive missionary ships named after him were maintained by Sunday schools from 1844. The John Williams V was wrecked off Samoa, Dec. 22, 1948.

John Williams,
British missionary
After R. Easton

Williams, RALPH VAUGHAN. This British composer is entered under Vaughan Williams.

Williams, ROGER (c. 1600-84). English colonist and writer. Born probably in London and educated at Sutton's Hospital (Charterhouse) and Pembroke College, Cambridge, he took orders in the Church of England, but became a nonconformist, and left for America in 1631. Landing in Massachusetts, he became pastor of the church in the Puritan stronghold of Salem, but having been

expelled in 1636, he founded a settlement on Narragansett Bay, which he called Providence.

The first Baptist church in America was established by Williams, but he afterwards withdrew from the communion. He twice visited England, in 1643 to obtain a charter for Rhode Island Colony, and in 1651-54, when he became acquainted with Milton and Cromwell. On return he was president of the colony till 1658. A pioneer of religious liberty, Williams upheld the right of every man to hold whatever religious opinions he chose. He wrote *A Key into the Languages of the Indians of America*. *Consult* Lives, O. S. Straus, 1894; E. J. Carpenter, 1909; R. W. and the English Revolution, J. Ernst, 1931.

Williams, SIR WILLIAM FENWICK (1800-83). British soldier. Born at Halifax, N.S., Dec. 4, 1800, he entered the Royal Artillery in 1825, and in 1854 was appointed British commissioner with the Turkish army in Anatolia. Making his way to Kars, he thoroughly reorganized the Turkish forces, and made a memorable defence of the city against the Russians, though eventually compelled to capitulate. The "hero of Kars" was created K.C.B., 1856; was M.P. for Calne, 1856-59; commander-in-chief in Canada, 1859-65; governor of Nova Scotia, 1865-70; and of Gibraltar, 1870-76. Williams died July 26, 1883.

Williamsburg. A city of Virginia, U.S.A., the co. seat of James City co. It stands between the rivers York and James, 47 m. E.S.E. of Richmond, and is served by the Chesapeake and Ohio rly. It contains William and Mary College, chartered 1693, next to Harvard the oldest educational institution in the U.S.A. The city has been subjected to a unique piece of restoration in 18th-century style: 77 colonial buildings have been restored and 189 reconstructed from their foundations, while roads, squares, gardens, and greens have reverted to their original aspect. Much of the cost was borne by J. D. Rockefeller, jr. Settled in 1632, Williamsburg was the state capital from 1693 to 1779; and was chartered as a city in 1722. On May 5, 1862, an indecisive battle was fought here between the Confederates and Federals. Pop. 3,942.

Williams - Ellis, CLOUGH (b. 1883). British architect. Educated at Oundle and Trinity College, Cambridge, he became a leading advocate of town and country

planning. He purchased the site on which he designed and erected the model resort of Portmeirion, N. Wales. He converted Bonar Law College, Ashridge; made alterations at Stowe school; and did work at Dartmouth House and the Ladies' Carlton club, London. He became president of the Design and Industry Association, and chairman of the Society for Preservation of Rural Wales. He married in 1915 Amabel, daughter of St. Loe Strachey, and with her wrote *The Pleasures of Architecture*. Other books were *Architecture Here and Now* (with J. Summerson); *The Adventure of Building*; *England and the Octopus*; and *A History of the Tank Corps*. (See *Architecture*, p. 577.) Amabel Williams-Ellis wrote a number of instructive books for children.

Williamson, ALEXANDER WILLIAM (1824-1904). British chemist. Born at Wandsworth, May 1, 1824, he studied chemistry under Gmelin at Heidelberg, and Liebig at Giessen. Professor of chemistry at University College, London, 1849-87, he took a prominent part in the development of chemical theory, elucidated the problem of the formation of ether from alcohol and sulphuric acid, and first advanced views that are fundamental in the hypothesis of ionic dissociation. He died May 6, 1904.

Williamson, SIR ANDREW WALLACE (1856-1926). Scottish divine. He was born at Thornhill, Dumfriesshire, Dec. 29, 1856, and attended Morton school, Wallace Hall, and Edinburgh university. He became minister at N. Leith, 1882; S. Cuthbert's, Edinburgh, 1883-1909; S. Giles's, Edinburgh, 1910-25. This celebrated preacher was university lecturer in pastoral theology, 1897-98; moderator of the Church of Scotland, 1913-14; dean of the order of the Thistle and of the Chapel Royal, and chaplain to the king in Scotland. He died July 10, 1926, having just been knighted.

Williamson, CHARLES NORRIS (1857-1920). A British novelist, born at Exeter. He abandoned engineering in 1880 for journalism, and founded *Black and White* in 1891, editing it for two years. His stories, written in conjunction with his American wife, Alice Muriel Williamson (1875-1933), deal largely with the romance of motoring, and include *The Lightning Conductor*, 1902; *The Princess Passes*, 1904; *The Car of Destiny*, 1906. Williamson died Oct. 5, 1920.

Williamson, HENRY (b. 1897). English author. A Bedfordshire man, he made a name after the

Henry Williamson,
English author

First Great War, in which he fought as a private, with a four-volume autobiography, published 1921-28, and eventually collected as *The Flax of Dream*. Meanwhile Tarka the Otter, a penetrating piece of nature study in fictional form, had won him the Hawthornden prize in 1927. This was followed in 1935 by another nature book, *Salar the Salmon*. Williamson's disillusion with the military mind found expression in *The Wet Flanders Plain*, 1929, and *The Patriot's Progress*, 1930. Later he published *The Story of a Norfolk Farm*, 1941; *The Sun in the Sands*, 1944.

Williamson, WILLIAM CRAWFORD (1816-95). British botanist. Born at Scarborough, Nov. 23, 1816, he early showed a preference for the line of research which made him later the greatest British authority upon the plants of the Carboniferous period, though he qualified and practised as a surgeon. His memoirs on fossil plants were illustrated by his own drawings. Professor of botany at Owens College, Manchester, from 1851, he retired in 1892, and died June 23, 1895.

Williamsport. City of Pennsylvania, U.S.A., the co. seat of Lycoming co. A popular summer resort, it stands on the west branch of the Susquehanna river, 94 m. N. by W. of Harrisburg, and is served by the Pennsylvania and other rlys. An important lumber market, with a boom capable of receiving some 300 million ft. of logs, it had no other industry until 1910; but now has iron and steel works, engine and boiler plants, and manufactures glass, furniture, leather, farm implements, rubber, silk, clothing, gas engines, foundry and machine-shop products, and boots and shoes. Williamsport was incorporated in 1806, and became a city in 1866. Pop. 44,355.

Williamstown. City and seaport of Victoria, Australia. Virtually a suburb of Melbourne, from which it lies 4½ m. direct and 9 m. by rly. S.W., it has seven commodious piers at which the largest vessels can be berthed, patent slips and graving yards—one purchased in 1942 by the Common-

wealth government—and carries on shipbuilding. There are also govt. rly. works, woollen mills, engineering, basalt quarries, glass works, flour mills, oil refineries, and an ammonia plant. Pop. 26,640.

Willibrord (657-738). English saint and missionary to the Frisians. A hermit's son, he was born in Northumberland, and educated at Ripon and in Ireland. About 690 he went as a missionary to the Frisian tribes around the mouth of the Rhine, and settled at Utrecht, of which place he was in 696 made archbishop. He preached in the Netherlands and Denmark, and is regarded as the apostle of Christianity in the Netherlands. Dying Nov. 6, 738, he was buried near Trier, and miracles were said to occur at his tomb.

Willington, FREEMAN FREEMAN-THOMAS, 1st MARQUESS OF (1866-1941). British administrator. Born Sept. 12, 1866, he was educated at Eton and Trinity College, Cambridge. He was in the

Lord Willington,
British administrator
H. W. Barnett

university cricket eleven for four years, and also played for Sussex. A.D.C. to his father-in-law, Lord Brassey (q.v.), when governor of Victoria, 1895-98, Freeman-Thomas entered politics in 1900 as Liberal M.P. for Hastings. Junior lord of the Treasury, 1905-1912, he represented Bodmin during 1906-10; then he was raised to the peerage as a baron.

In 1913 he went to India as governor of Bombay; in 1918, a few months after relinquishing this appointment, he became governor of Madras. During this period he did much to assist the Indians towards self-government, and at the end of his term, 1924, was raised to a viscounty. In 1926 he went to China as chairman of an Anglo-Chinese mission, but was recalled to become governor-general of Canada. Five years later he returned to India as viceroy until 1936, and in this office persuaded Gandhi to come to London for the round-table conference on Indian reform. Raised to a marquessate in 1936, he died Aug. 12, 1941, when his title passed to his son Inigo (b. 1899), formerly known as Viscount Ratendone.

Willis, NATHANIEL PARKER (1806-87). American author. Born at Portland, Maine, Jan. 20, 1806, and educated at Boston,

Mass., Andover, and Yale, he wrote a good deal of ephemeral verse and several novels. He is best

N. P. Willis,
American author

known in Great Britain by his Pencilings by the Way, 1835, which first appeared in the columns of the New York Mirror. These sketches of English literary celebrities, the outcome of a visit to Europe in 1831, roused considerable ill-feeling against Willis in London, the charge being that he had published private conversations. He died Jan. 20, 1867.

Willis, THOMAS (1621-75). English physician. Born Jan. 27, 1621, in Wiltshire, he graduated from Christ Church, Oxford, in 1639, and in 1660 became Sedleian professor of natural philosophy in the university. He wrote several works in Latin about the brain and nerves. Setting up a practice in London in 1666, he continued to publish his medical treatises, specialising in the study of urinary diseases, and discovering the presence of sugar in the urine in certain forms of diabetes. A founder member of the Royal Society, he died Nov. 11, 1675.

Willis's Rooms. Former London place of amusement. In King Street, St. James's, the rooms were opened in 1863 as a successor to Almack's (*q.v.*), and were the scene of many notable gatherings, including the farewell banquet to Charles Mathews, Jan. 10, 1870.

Willkie, WENDELL LEWIS (1892-1944). American business man and politician. Born of

German stock at Elwood, Ind., Feb. 18, 1892, he worked his way through the university of Indiana and then studied law. Success as legal adviser

Wendell Willkie,
American politician

to a public utility company led to his entering the business world. In 1933 he became president of the Southern and Commonwealth corporation; in that capacity he came into conflict with Roosevelt's Tennessee Valley scheme as a champion of private enterprise against the state. This led to the adoption of Willkie, though a Democrat, as

Republican candidate at the 1940 presidential election, and he secured a larger vote than his predecessors in 1932 and 1936. An unofficial visit he paid to Great Britain in 1941, when he was received by the king, the prime minister, and other members of the cabinet, convinced him of that country's courage and determination, and made him its firm friend. Willkie supported the foreign policy of Roosevelt, who in 1942 appointed him special representative in the Near East, Russia, and China. Experiences during his tour were recorded in One World, 1943, which sold over a million copies. Willkie died in New York, Oct. 7, 1944.

Will-o'-the-Wisp. Popular name for the pale light frequently seen at night over marshes, and more correctly known as Ignis Fatuus (*q.v.*).

Willoughby, SIR HUGH (c. 1500-54). English explorer. Son of Sir Henry Willoughby of Risley,

Sir Hugh Willoughby,
English explorer
Wollaton Hall

he served in the Scottish war of 1544, when he was knighted. In 1553 he was dispatched, in command of three vessels, to find a north-east passage to India and Cathay. The ships were dispersed by a gale off the Norwegian coast, but Willoughby's and one of the other vessels made the harbour of Arzina, in Lapland, where everyone perished of scurvy. The third vessel of the expedition was commanded by Richard Chancellor (*q.v.*), who made his way into Russia.

Willoughby de Broke, BARON. English title held by the Willoughby and Verney families since 1491. The barony was granted to Sir Robert Willoughby, who had fought at Bosworth and later commanded the English armies in France. The title fell into abeyance on the death of his son Robert in 1522, but was successfully claimed in 1694 by Sir George Verney, who took his seat in parliament as 11th baron. From him the title descended to Henry Peyton, 16th baron, who died childless in 1852. He was succeeded by his nephew, Robert John, from whom the title descended until in 1923 it came to John (b. May 21, 1896), 20th baron. The family seat is at Compton Verney, Warwick. *Pron.* Willowby de Brook.

Willoughby de Eresby, PEREGRINE BERTIE, BARON (1555-1601). English soldier. Born at Cleves,

Baron Willoughby
de Eresby,
English soldier
From an old print

Oct. 12, 1555, and brought up in England, he succeeded to the barony of Willoughby de Eresby in 1580. He took part in the campaign in the Netherlands, became governor of Bergen-op-Zoom, distinguished himself in several battles, and in 1587 took command of the English army. After the successful defence of Bergen in the autumn of 1588, he resigned his command and retired to England. A few months later he joined Henry of Navarre in command of an English expedition at Dieppe, and fought in the campaign in N. France, and brought his army home early in 1590. After some years in retirement on the Continent, Willoughby was made governor of Berwick, and took part in the negotiations between the English and Scottish courts. He died June 25, 1601. Lord Willoughby de Eresby is still the courtesy title of the eldest son of the earl of Ancaster (*q.v.*). *Pron.* Willowby Dersby.

Willow (*Salix*). Genus of trees and shrubs of the family Salicaceae. They are chiefly

Willow. Leaves and
male catkins of *Salix*
fragilis

natives of the N. temperate regions, and some attain to a height of 80 ft. Willows may be planted in heavy moist soils, in autumn or spring, preferably by the margins of lakes, ponds, and streams, and are propagated by shoots or cuttings taken at the same periods of the year. One of the commonest species is the crack willow (*S. fragilis*), which receives its name from the readiness with which the branches break from the stem. The dwarf or shrubby species of willows are known as osiers (*q.v.*). Wood of the willow is used for cricket bats, chair making, the handles of agricultural implements, clogs, and many other purposes.

The weeping willow (*S. babylonica*), native of E. Asia, is so called on account of the drooping habit of its leaves. The willow of the Babylonian dist. is really a species of poplar (*Populus euphratica*).

Willow Herb, ROSEBAY, OR FRENCH WILLOW (*Epilobium angustifolium*). Perennial herb of

the family Onagraceae, native of Europe, N. and W. Asia, and America. It has unbranched stems four feet high, with alternate lance-shaped leaves. The stems end in a long spray of rosy-purple flowers, each an inch across. The slender seed capsules, numbering over 200 to each plant, are 3-4 ins. long, and each contains some 400 seeds attached to bundles of long, silky hairs. Called fireweed in the U.S.A., the plant flourishes particularly on burnt sites, e.g. of heath fires and charcoal burnings, and became the typical weed of the bombed areas of London.

Willow Herb. Spikes of the rosy flowers

Willow Pattern Ware. Class of English china printed with an elaborate design of Chinese origin. It was first produced about 1780 by Thomas Turner (1749-1809) at Caughley, Shropshire, and imitated by other potters. The design, in blue, on a white or bluish-white ground, represents a river with houses, gardens, a bridge, trees, human figures, and birds, and is supposed to illustrate the story of a mandarin's daughter who eloped with her father's secretary, the couple when pursued being transformed into a pair of doves. See

Willow Pattern Ware. Plate showing the story of the Chinese mandarin's daughter

Pottery. Consult Ceramic Art of Great Britain, L. Jewitt, 1878; History and Description of English Porcelain, W. Burton, 1902.

Willow Run. The site, 30 m. from Detroit, U.S.A., of a mammoth aircraft factory established by Henry Ford during the Second Great War. Here he adapted his familiar method of motor production to creating a moving assembly line covering every stage in building four-engined Liberator bombers. The original plan called for turning out a bomber an hour, but this rate was not actually reached. To prevent use of faulty parts, vital castings were X-rayed, and every part was specifically examined. The plant included a training school, which cost £125,000.

Wills. The name of a British family of tobacco manufacturers. The founder of the family fortunes, Henry Overton Wills (1761-1826), joined his father-in-law, William Day, in a tobacco-manufacturing business in Bristol. He left his share in the firm to two sons, William Day (1797-1865) and Henry Overton (1800-71) under whose names the firm, with premises in Redcliffe St., became W. D. & H. O. Wills. The elder was succeeded by his son William Henry Wills (1830-1911), who became first chairman of the Imperial Tobacco co. in 1901; he was created Baron Winterstoke in 1906, but the title became extinct at his death. H. O. Wills II had three sons: Henry Overton III (1828-1911), who was the father of Sir George Alfred Wills (1854-1928), created baronet in 1923; Sir Edward Payson Wills (1834-1910), made a baronet in 1904, and the father of Sir Edward Channing Wills (1861-1921), on whose death the title passed to a younger brother, Sir Ernest Salter Wills (b. 1869); and Sir Frederick Wills (1838-1909), who was made a baronet in 1897, and whose son Gilbert Alan Hamilton Wills (b. 1880) was created Baron Dulverton in 1929. The family made munificent gifts to Bristol university, endowing the Henry Overton Wills chair of physics, and building the new physics laboratories, opened in 1929.

Wills, WILLIAM GORMAN (1828-91). British dramatist. Born Jan. 28, 1828, at Kilmurry, son of James Wills, the biographer, and educated at Trinity College, Dublin, he came to London, and attained some vogue as a portrait painter, becoming known also for his Bohemian habits. He wrote a number of dramas, some of which

were still played in the provinces after the First Great War. The best known are Charles I, 1872; Jane Shore, 1876; A Royal Divorce, 1891.

He was also the author of the song, I'll sing thee songs of Araby. He died Dec. 13, 1891.

Wills, WILLIAM JOHN (1834-61). British explorer. A Devon man, born at Totnes, Jan. 5, 1834, he

William J. Wills, Australian explorer

emigrated to Victoria in 1852, and worked first as a shepherd and later as a surveyor. In 1860 he joined the expedition to cross the continent from south to north under Robert Burke (q.v.), becoming second in command. With a few companions Wills and Burke pushed on to within a few miles of the Gulf of Carpentaria, reaching the tidal river Flinders, but on their return journey they were overtaken by starvation, and all but one man died at Cooper's Creek, June, 1861.

Will's Coffee-House. Once famous literary resort in London. Situated at the N.W. corner of Russell Street and Bow Street, Covent Garden, and named after its founder, William Urwin, it was a favourite haunt of Dryden, Wycherley, Pope, and other writers.

Will Shakespeare. Play by Clemence Dane. Based on episodes, some imaginary, from the life of Shakespeare, it was in blank verse. Produced at the Shaftesbury Theatre, London, Nov. 17, 1921, it became one of the most successful plays of its time.

Wills-Moody, HELEN (b. 1905). American lawn tennis player. Born at Berkeley, Calif., Oct. 6, 1905, daughter of a doctor, she attended the state university. She won the national lawn tennis championship in 1923, reached the final against K. McKane on her first visit to Wimbledon next year, and after the retirement in

W. G. Wills, British dramatist

Helen Wills-Moody, American lawn tennis player

1926 of S. Lenglen she was invincible at singles until defeated in 1933 by Helen Jacobs in America. Tall and stately, she played a game of deadly accuracy and unbreakable control mainly from the baseline. Seven times champion of the U.S.A., four times in succession of France, she created a record at Wimbledon by winning on each of the eight times she entered between 1927 and 1938. Regarding the game as a recreation, she was a painter and designer, wrote novels, and published in 1937 an autobiography with the punning title *Fifteen-Thirty*. She married Frederick Moody in 1927, and the polo player Aidan Roark in 1939.

Willstätter, RICHARD (b. 1872). German chemist, born at Karlsruhe, Aug. 13, 1872. He studied at Munich and there was appointed lecturer, 1896, and professor, 1902; he transferred to Zürich, 1905, and in 1912 joined the Berlin research laboratory of the Kaiser Wilhelm institute and simultaneously was professor in the university. While teaching at Munich university, 1915-25, he did valuable research into chlorophyll, vegetable colours, photo-synthesis, catalytic hydration, and fermentation; this helped to revolutionise the dyeing industry. Publications appeared on chlorophyll (1913), assimilation of carbonic acid (1918), and enzymes (1928). Willstätter also discovered a method for transforming ligneous substance into sugar. In 1915 he was awarded the Nobel prize for chemistry; in 1933 the Willard-Gibbs medal of the American Chemical Society.

Wilmington. Village and parish of Sussex, England. It is situated 6 m. N.W. of Eastbourne. There are the ruins of a Benedictine priory, founded in 1088, and now embodied in a farm house. On the down near by is the Long Man of Wilmington, a gigantic figure 240 ft. high, cut in the side of the hill and visible for miles. The figure holds a staff in each hand and has been outlined in white bricks. It is probably of ancient British origin.

Wilmington. Largest city of Delaware, U.S.A., the co. seat of New Castle co. A port of entry, it stands on Delaware river and Christiana and Brandywine Creeks, 26 m. S.W. of Philadelphia, and is served by the Baltimore and Ohio and other rlys. The Old Swedes' church of Holy Trinity, erected in 1698, is regarded as the oldest church in the U.S.A. in which services are still held. There are shipbuilding yards, rly. workshops,

and various other industries, but business is dominated by the E. I. du Pont de Nemours powder company. The Swedes, who built a fort here in 1638, were succeeded in 1655 by Dutch settlers, who were followed in 1664 by the English. Louis Philippe and Cobett were both teachers here during exile. Wilmington was incorporated as a borough in 1739, and became a city in 1832. The only place in Delaware with pop. over 6,000, it has 112,504.

Wilmington. City of North Carolina, U.S.A., the co. seat of New Hanover co. A port of entry, it stands on Cape Fear river, about 30 m. from its embouchure into the Atlantic, and is served by the Atlantic Coast and Seaboard Air Line rlys. Settled in 1730, it was called Newtown until 1739, when it was incorporated; it became a city in 1866. Government shipyards were built in both Great Wars; in peace time fertilisers are the principal product. Pop. 33,407, of whom 40 p.c. are negroes.

Wilmslow. Urban dist. and town of Cheshire, England. Situated on the Bollin, 6 m. N.W. of Macclesfield, it has a rly. station, and is largely residential. The parish church of S. Bartholomew contains a fine rood screen and monuments. Pop. 16,500.

Wilno. Polish name of the capital of Lithuania S.S.R., described under its more familiar Russian name of Vilna.

Wilson, HENRY MAITLAND WILSON, 1ST BARON (b. 1881). British soldier. An Etonian, he

Lord Wilson,
British soldier

was commissioned in the Rifle Brigade, 1900, served in the S. African War, and fought in France and Belgium during the First Great War, when he was awarded the D.S.O. After commanding the 2nd div. at Aldershot from 1937, he became c.-in-c., Egypt, on the outbreak of the Second Great War, and in 1941 was transferred to Cyrenaica as military governor. He led British forces in the five weeks' campaign in Greece, was promoted full general, and led Allied forces which occupied Damascus and Beirut. Having been c.-in-c., Persia and Iraq, and then in the Middle East, he was during 1944 supreme allied commander in the Mediterranean, in which capa-

city he was responsible for the Allied landing in the S. of France. In Nov. he succeeded Dill as head of the British joint staff mission in Washington, and the prime minister's personal representative to the president on military matters, remaining there until 1947. He attended the conferences at Yalta and Potsdam as a military adviser. Knighted in 1940, he was promoted field-marshal in 1944, and raised to the peerage in 1946 as Baron Wilson of Libya and Stowlangtoft.

Wilson, CHARLES THOMSON REES (b. 1869). British physicist. He was born at Glencorse, Midlothian, Feb. 14, 1869, and educated at Owens College, Manchester, and Sidney Sussex College, Cambridge. A fellow of the latter for some years, he became Jacksonian professor of natural philosophy at Cambridge in 1925, retiring in 1934. A brilliant research worker on ionisation and atmospheric electricity, he shared the Nobel prize for physics in 1927 with A. H. Compton (*q.v.*), chiefly because of his invention of the cloud chamber method of displaying the tracks of individually charged particles. He was created C.H. in 1937.

Wilson, SIR CHARLES WILLIAM (1836-1905). British soldier and archaeologist. Born at Liverpool

March 14, 1836, and educated at Cheltenham and Bonn, he joined the Royal Engineers in 1855. He

served on the commission that marked out the boundary between the U.S.A. and British Columbia, 1858-62, and in 1864-65 made a survey of Jerusalem and the surrounding district, work which led to the establishment of the Palestine Exploration Fund (*q.v.*). In 1882, while serving in Egypt, he was appointed chief of the intelligence department, and was thus concerned in the expedition for the relief of Gordon. Director-general of the ordnance survey, 1886-93, and of military education at the War office, 1892-98, Wilson died Oct. 25, 1905. He published *From Korti to Khartoum*, 1885; *Lord Clive*, 1890; and various writings on his work as a surveyor.

Wilson, EDWARD ADRIAN (1872-1912). English explorer. Born at Cheltenham, July 23, 1872, he was

Sir Charles Wilson,
British soldier

a qualified doctor, a brilliant illustrator, and a keen, well-informed naturalist, and was selected by Capt. Scott as medical officer and zoologist in the Discovery expedition of 1901-04. He was employed 1905-10 in research on grouse disease, which proved extremely valuable. In 1910 he joined Scott's last expedition to the Antarctic. Having reached the South Pole with his leader in 1912, he perished with him on the way back, about March 29. *Consult* Edward Wilson, G. Seaver, 1933.

Wilson, Sir Henry Fuller Maitland (1859-1941). British soldier. Born Feb. 18, 1859, and educated at Eton, he joined the Rifle Brigade in 1878, and saw active service at once in Afghanistan. He went through the S. African War and spent 1907-11 on the general staff in India. He had a distinguished record in the First Great War, commanding the 2nd Essex in the retreat from Mons, a division in France, and a corps in the Salonica expedition. On Nov. 13, 1918, now lieutenant-gen., he landed at Constantinople (Istanbul) as commander of the Allied forces occupying Turkish territory under the armistice terms. He was created K.C.B. in 1915, retired in 1921, and lived until Nov. 16, 1941.

Wilson, Sir Henry Hughes (1864-1922). British soldier. Born May 5, 1864, at Edgeworthstown, co. Longford, he went to Marlborough and Sandhurst, and entered the Royal Irish regiment, 1884, transferring to the Rifle Brigade the same year. He served in

Sir Henry H. Wilson,
British soldier
Russell

Burma, 1885-87, and in the S. African War. Assistant director of staff duties, War office, 1904-06; commandant of the staff college, 1907-10; director of military operations, 1910-14; he went to France on the outbreak of the First Great War as assistant chief of staff to French, was later a corps commander, then chief liaison officer with the French supreme command. After a period in command of the Eastern division at home, and a visit to Russia with Milner's mission in 1916, Wilson returned to France, 1917, as British military representative on the Allies' war council at Versailles. This post he vacated in Feb., 1918, when he succeeded Robertson as C.I.G.S. Wilson

was knighted in 1915, made a baronet and promoted field-marshal in 1919, and awarded £10,000 for his special war services. Leaving the War office in 1922, he was elected M.P. for N. Down, but on June 22 he was attacked and assassinated outside his own house in Eaton Place, London, by Sinn Féin sympathisers. As he was at the time returning from a ceremony he was in uniform, and died with his sword drawn against his assailants.

Wilson, Sir Horace John (b. 1882). British civil servant. He was born Aug. 23, 1882, and went from Kumella school, Bournemouth, to the London School of Economics. In 1900 he entered the civil service, rising to be permanent secretary to the ministry of Labour in 1921. In 1924 he was knighted, and three years later appointed chief industrial adviser to the govt. Seconded to the Treasury from 1935, he was the principal assistant to Chamberlain in his policy of appeasement, which led to the Munich Crisis (q.v.). Sir Horace was permanent secretary to the Treasury and head of the civil service 1939-42.

Wilson, (James) Harold (b. 1916). British politician. He was born at Huddersfield, March 11, 1916, and educated at Milnsbridge council school; Royds Hall, Huddersfield; Wirral grammar school; and Jesus College, Oxford. From 1938 a fellow of University College, Oxford, he joined the war cabinet secretariat in 1940 as economic assistant, and during 1943-44 was director of economics and statistics to the ministry of Fuel and Power. Elected Labour M.P. for Ormskirk in 1945, he was appointed parl. secretary to the ministry of Works. After a few months in 1947 as secretary for overseas trade, he became president of the board of trade, the youngest holder of high office for many years.

Wilson, John (1785-1854). Scottish author, also known by his pen-name of Christopher North. He was born at Paisley, May 18, 1785, and educated at Glasgow university and Magdalen College, Oxford. After a period of residence in the Lake District, the loss of his fortune determined him to go to Edinburgh. He became con-

nected with Blackwood's Magazine, and with Lockhart was the mainstay of that periodical. In

John Wilson,
Scottish author

1820 Wilson was appointed professor of moral philosophy at Edinburgh university. He died April 3, 1854. His fame chiefly rests on the *Noctes Ambrosianae*, a series of dialogues purporting to have been spoken at Ambrose's Tavern, Edinburgh. *Consult* Christopher North: John Wilson, E. Swann, 1934.

Wilson, John Dover (b. 1881). English scholar. He was born in London, July 13, 1881, and educated at Lancing College and Gonville and Caius College, Cambridge. After a short time as a teacher, he was lecturer in English literature at Helsingfors (Helsinki) university, Finland, during 1906-09, and at Goldsmith's College, London, during 1909-12. An inspector of schools for a time, he became professor of education at London university, 1924, transferring to Edinburgh university later; there he was professor of rhetoric and English literature from 1936 to 1945.

Dover Wilson was best known for his studies of Shakespeare, on whom he wrote many books, including: *Life in Shakespeare's England*, 1911; *The Essential Shakespeare*, 1932; *The Manuscript of Shakespeare's Hamlet*, 1935; *The Fortunes of Falstaff*, 1943. He also edited, jointly with Sir A. Quiller-Couch, the *New Shakespeare*, which was an attempt to produce a text both readable and correct.

Wilson, John Mackay (1804-35). Scottish author. Born near Berwick-on-Tweed, Aug. 15, 1804, the son of a millwright, he became a printer. He drifted into literature and lecturing, and after a period in London returned to Berwick as editor of *The Berwick Advertiser* in

J. M. Wilson,
Scottish author
After J. Gellatly

1832. He is chiefly remembered by the well-known *Tales of the Borders*, started in 1834 as a weekly publication. He died Oct. 2, 1835.

Wilson, JOSEPH HAVELOCK (1859-1929). British labour leader. After receiving his early education

Havelock Wilson,
British labour leader

at the Boys' British School, Sunderland, he ran away to sea when 12 years old. When he left the sea, he began to agitate for better conditions for seamen, becoming president of the national sailors' and firemen's union. M.P. for Middlesbrough, 1892-1900 and 1906-10, he represented S. Shields, 1918-22. His autobiography, *My Stormy Voyage Through Life*, appeared in 1925. He died April 16, 1929. See Merchant Navy.

Wilson, RICHARD (1714-82). British painter. Born at Penegoes, Mont., Aug. 1, 1714, he went to London in 1729, studied under T. Wright, and became a portrait painter. He was in Italy during 1749-55, when he abandoned portraits for landscapes, and on his return failed to attain success owing to the indifference of the public who preferred the realism of Hogarth and Gainsborough. One of the 36 original Academicians in 1768, he became librarian to the R. A. in 1776. He died at Llanberis, May 15, 1782.

Of great importance in the development of English painting, Wilson's idealistic and poetical style, deriving from Salvator Rosa and Claude, produced supreme examples of imaginative insight. Many of his mountain landscapes, such as those of Snowdon and Cader Idris, romantic excursions of impressive strength and mastery, had influence on Turner. Nine of Wilson's paintings are at the National Gallery, and he is represented also at S. Kensington, Glasgow, and in private collections. His *Destruction of the Children of Niobe* was ruined in bomb damage to the Tate Gallery during the Second Great War. An exhibition of 131 paintings and drawings was held at Birmingham in 1948. Consult R. W., the Grand Classic, A. Bury, 1947.

Wilson, THOMAS (1663-1755). English prelate. Born at Burton, Cheshire, Dec. 20, 1663, and edu-

cated at Trinity College, Dublin, he was ordained in 1686, and was for some years domestic chaplain to the earl of Derby, through whose influence he was appointed bishop of Sodor and Man in 1697. He did a great work in building churches and establishing schools, and died March 7, 1755.

Wilson, (THOMAS) WOODROW (1856-1924). American president. Born at Staunton, Virginia, Dec. 28, 1856, he came of Scottish and Northern Irish stock, his father being a Presbyterian minister. Educated at Davidson College, N. Carolina, and at the universities of Princeton and Virginia, his student career was brilliant. He became a lawyer and practised for a time at Atlanta, Georgia.

Already a student of political science, he published his thesis for a degree, Congressional Government, in 1885. In the same year he was chosen associate professor of history at Bryn Mawr College, moving in 1888 to the Wesleyan university as professor of political economy. In 1890 he became professor of jurisprudence and politics at Princeton, and during 1902-11 he was its president.

In 1910, Wilson, a Democrat, was elected governor of New Jersey, where he initiated vigorous reforms. This brought him before the public, and in 1912, after a spirited contest, he was chosen Democratic candidate for the presidency. The election gave him

Thomas Wilson,
English prelate
After R. Phillips

6,200,000 votes, a large majority over a Republican vote split between Roosevelt and Taft.

As president, Wilson carried out the Democratic programme with celerity, reducing the tariff, establishing a federal income tax, and reforming the currency. He declined to embroil the U.S.A. for the sake of American interests in Mexico, and in face of great disorders contended that the Mexicans must be left alone to work out their own salvation. Wilson induced congress to conform to treaty obligations by repealing its Act exempting American shipping from Panama Canal tolls, and he negotiated treaties with Great Britain, France, the S. American republics, etc., by which in the event of disputes, a year had to elapse before a resort to arms.

When the First Great War broke out in 1914, Wilson was resolute in neutrality. He would not denounce the devastation of Belgium, but was incensed at the British

maritime blockade and for a while exasperated the Allies by public speeches on 'peace without victory,' the "freedom of the seas," and a league to enforce

peace. However, Wilson kept the U.S.A. out of the war, and on that record he was re-elected president in 1916 by a narrow margin.

His second term had hardly begun when Germany's unlimited U-boat campaign forced him to assent to America's entry into the

Woodrow Wilson

Richard Wilson's landscape, *On the Wye*, one of his fine paintings in the National Gallery, London

war. In an address to congress, Jan. 8, 1918, he first laid down his famous Fourteen Points (*g.v.*) as a programme of world peace. In other speeches he insisted on a peace that would conform to abstract justice and national aspirations, and he advocated especially the principle of self-determination. After the armistice Wilson went to Paris in Dec., 1918, as the head of the U.S. delegation to the peace conference.

In Europe he was regarded as the "man of destiny," the mouth-piece of an entirely united nation, and was received with enthusiasm. But before sailing he had already lost to the Republicans both his majority in congress and his control of the foreign relations committee.

In Paris Wilson achieved his first concern, the adoption of the League of Nations, but he bought his success dearly. Bitter and factious Republican opposition

awaited his ideas at home, and in Europe he was confronted by the old nationalist prejudices. After signing the peace treaty in 1919 he returned to America, and undertook a strenuous speech-making tour to plead the cause of the League of Nations. But he suffered a complete nervous breakdown in late Sept., in the middle of his tour. The refusal of the senate to ratify the treaty caused Wilson, from his sick bed, to advise the Democrats to stake all on the election of 1920. But in this they were overwhelmingly defeated, and the U.S.A. did not enter the League of Nations. Wilson, who never recovered his health, lived in retirement in Washington until his death, Feb. 3, 1924.

Wilson, who was awarded the Nobel peace prize in 1920, married twice, his first wife dying in 1914 during his presidency. His own most important publications were *The State*, 1889; *History of the*

Wilton. Ancient bor. and market town of Wilt, England. It stands on the river Wylye, 2½ m. W. of Salisbury, and has a rly. station.

Wilton House, seat of the earl of Pembroke, is famous for its associations with Shakespeare, Sidney, and other Elizabethans, and its collection of pictures and works of art. Wilton gives its name to a kind of carpet which has long been made here. Sheep fairs are held. Here A. G. Street was born and resided. Pop. est. 2,600. See Carpet.

Wiltshire. County of England. In the S. of the country, its area is 1,345 sq. m., between Berks, Hants, Dorset, Somerset, and Glos. Partly hilly, it is divided into two portions by the Vale of Pewsey; the northern and more fertile one includes the Marlborough Downs, while the southern, in which are numerous valleys, contains Salisbury Plain. Inkpen Beacon, partly in Berks, reaches 975 ft., the highest point. The county embraces parts of Cranborne Chase and the New Forest, and the whole of Savernake

Wiltshire. Map of this agricultural and pastoral southern county of England

Wilton arms

Forest. The chief rivers are the Bristol Avon, Salisbury Avon, Kennet, Ebbie, and Nadder. Main industries are keeping sheep, dairy farming, and the production of cheese and bacon. Oats and other cereals are grown. Salisbury is the county town, but Swindon is the largest. Among attractive old market towns are Marlborough, Chippenham, Calne, Warminster, Devizes, Trowbridge, Malmesbury, and Wilton, after which the county is named. Sights include Salisbury cathedral; Lacock and Malmesbury abbeys; Fonthill, Bowood, and Longleat among houses. Beautiful villages are too numerous to name. There are one bor., 4 co. constituencies. Pop. 303,373.

Wiltshire is rich in British, Roman, and Anglo-Saxon remains, notably Stonehenge and the stone circle of Avebury. Wansdyke is an ancient downland track, but the six white horses in the chalk are modern, that at Westbury dating from 1778. Wiltshire had some flourishing towns in Anglo-Saxon times. Religious houses were founded and castles built under the Normans. Later the county became noted for wool and cloth.

LITERARY ASSOCIATIONS, ETC. The roll begins with the 12th cent. historian, William of Malmesbury. Among famous sons of the county may be noted Sir John Davies, 17th century poet, born at Tisbury; Massinger, at Salisbury; Hobbes, at Malmesbury; Aubrey, at Easton Pierse; 1st earl of Clarendon, at Dinton; Addison, at Milston, near Amesbury; Jefferies, at Swindon, and Alfred Williams, near it; A. G. Street, at Wilton. Sidney is said to have written his *Arcadia* at Wilton; and James Thomson his *Spring* at Marlborough. George Herbert was rector of Bemerton. East Knoyle was the birthplace of Wren. Among books in which local colour may be found are Jefferies's *Story of My Heart*, and Weyman's *The Castle Inn*. The King's England vol. on Wiltshire came out in 1939.

Wiltshire Regiment. Unit of the British army. Raised in Scotland in 1756 as the 62nd

Wiltshire Regiment badge

Foot, it became the 2nd bn. of the 4th Foot (King's Own Royal Lancaster Regiment) in 1757, but was made a separate corps the following year. Its first active service

dence the 62nd Foot acted as light infantry and earned the nickname of Springers. Two battle honours were won under Wellington in the Peninsular War. The 62nd was engaged in the Sikh War, Crimean War, China War (1860), and Zulu War. In 1874 the regt. was given the subsidiary title, Duke of Edinburgh's, and in 1881 absorbed as its second bn. the 99th Foot, which, raised in Scotland in 1824, had spent its early years guarding convicts in New South Wales, and saw its first active service against the Maoris, 1845-48. Both bns. fought in the S. African War.

Twelve bns. of the Wiltshire Regt. were raised during the First Great War and earned the battle honours: Mons; Messines, 1914,

campaigns. It is now a regt. of the Royal Armoured Corps. The standard book on the Wiltshire Yeomanry is by Col. W. Pitt.

Wimbledon. Parl. and mun. bor. of Surrey, England. It is 7 m. S.W. of London and is served by

Wimbledon arms

rly., underground rly., tram, bus, and trolley bus. Its common of 1,000 acres, public property since 1871, was the scene of the N.R.A. meetings, 1860-89, and has remains of a Celtic earthwork, called Caesar's Camp. In 1922 it was enlarged by 42 acres laid out as a war memorial garden. The parish church, S. Mary's, founded in the

'17, '18; Ypres, 1914, '17; Somme, 1916, '18; Arras, 1917; Bapaume, 1918; Macedonia, 1915-18; Gallipoli, 1915-16; Palestine, 1917-18; Bagdad. In the Second Great War bns. fought in Burma and N.W. Europe. The depot is at Devizes.

Wiltshire Yeomanry. Senior cavalry regt. of the British territorial army. It was raised in 1794

as a volunteer regt. for home defence against the threatened French invasion. It first saw active service in the S. African War, when it provided a company for the 1st Imperial Yeomanry. In the First Great War the regt. fought under

Allenby in Egypt and Palestine. At the outbreak of the Second Great War, it moved to Palestine with the 1st cavalry div., and after the campaign in Syria was mechanized and joined the 8th army. It was the first British armoured unit to break through the German lines at Alamein, and thereafter fought through the N. Africa and Italy

14th century, was rebuilt 1788, 1843, and 1860, and has a mortuary chapel erected by Viscount Wimbledon (d. 1638). Near are the headquarters of the All-England lawn tennis club where the famous tournament is held annually in June-July. Wimbledon, chartered in 1905, gives its name to a bor. constituency. Pop. 59,000. See Lawn Tennis.

Wimborne, Dorset. North side and main doorway of the cruciform minster of S. Outhberga

Consult History and Antiquities of Wimborne, W. A. Bartlett, 1865; Wimbledon Common, W. Johnson, 1912; G. Boas, 1947.

Wimborne. Urban dist. and market town of Dorset, England. It is 6 m. N. of Poole by rly. Mentioned by early writers as Viburnan, it was probably a Roman station, but grew to importance

with the building of the collegiate church or minster of S. Outhberga, founded by Edward the Confessor in 1043. Cruciform in plan, this has a transitional Norman tower, a 15th century Perp. tower at the W. end, a lunar orrery, and a chained library. There is a free grammar school in Wimborne, at which Matthew Prior, a native, was educated. Market day, Tues. Pop. approx. 4,250.

Wimborne, VISCOUNT. British title borne by the family of Guest. In 1838 Sir Josiah Guest, M.P. (1785-1852), a wealthy iron-master in S. Wales, was made a baronet. His son Ivor (1835-1914) was made Baron Wimborne in 1880. His son, Ivor Churchill Guest (1873-1939), after education at Eton and Trinity College, Cambridge, and service in the S. African War, was M.P. for Plymouth 1900-06, then for Cardiff until in 1910 he was raised to the peerage as Baron Ashby St. Ledgers. Paymaster-general 1910-12, and lord-lieutenant of Ireland, 1915-18, he succeeded to his father's barony, 1914, and was raised in 1918 to a viscounty. This came on his death, June 14, 1939, to his son Ivor (b. Feb. 21, 1903).

Wimereux. Village of France. In the dept. of Pas-de-Calais, it stands 4 m. N. of Boulogne-sur-

1st Visct. Wimborne,
British politician
Russell

and became a black-and-white artist. He served in the S. African War with Paget's Horse, and soon after his return to England began writing for the stage, supplying lyrics for many successful musical comedies, e.g. The Arcadians, 1909; The Balkan Princess, 1910; The Sunshine Girl, 1912. Later he wrote, alone or in collaboration, the words for musical shows, also light comedies, e.g. The Passing Show, 1914; Bric-a-Brac, 1915; My Lady Frayle, 1916; Bluebeard's Eighth Wife, 1922; A Warm Corner, 1929. He also produced scripts for films.

Wimsey, LORD PETER. Hero of the detective novels of Dorothy L. Sayers (q.v.). Making his first appearance in Whose Body?, 1923, he was featured in some 10 other novels, as well as in short stories; on the stage he appeared in Busman's Honeymoon (by Dorothy Sayers and M. St. Clare Byrne), produced at the Comedy Theatre, London, in 1936, when the part was played by Dennis Arundell. Lord Peter, a former Oxford cricket blue and a skilled musician, is superficially a rather cynical young man about town; but his intellect, under a veneer of mental lethargy, is first-rate, enabling him to solve the most complicated problems in detection. He has also an interest in works of art of obscure periods, satisfied by his immense wealth.

Wimshurst Machine. In electricity, a self-exciting induction machine for producing static electricity. It has two glass plates mounted on the same spindle but

Wimshurst Machine.

exciting induction
machine which
produces static
electricity

revolving in opposite directions. The machine is named after James Wimshurst, F.R.S. (1832-1903), who invented it and who personally built nearly 100 specimens of various types.

Winant, JOHN GILBERT (1889-1947). American politician and diplomatist. Born in New York, Feb. 23, 1889, he went from S. Paul's school, Concord, N.H., to Princeton university. After a short period as history teacher at his old school, he entered the New Hampshire legislature as a Republican, though with progressive ideas. When the U.S.A. entered the First Great War Winant joined the expeditionary force, commanding one of the first air squadrons to serve in Europe. After the war he made a fortune as part discoverer and exploiter of oilfields in Texas, but continued his political career in New Hampshire. For three terms he was governor of the state, being elected in 1925, 1931, and 1933. In 1935 he became assistant director of the I.L.O. in Geneva, being appointed director in 1938, and supervising its removal to Canada early in the Second Great War. Winant had always supported Roosevelt's "new deal," and the president sent him to London as ambassador in 1941. In 1946 he received an honorary O.M., and returned to the U.S.A., where he committed suicide on Nov. 3, 1947. His book, A Letter from Grosvenor Square, appeared thereafter.

J. G. Winant,
American diplomatist

Wincanton. Town of Somerset, England. It is situated 10 m. S.E. of Wells, and has rly. connexion with Templecombe. It was originally called Wyndcaleton, after the river Cale, which flows near. The town was almost destroyed by fire in 1707, and the 14th cen-

sists of a pair of frames spaced apart, fixed to a common base and providing secure bearings for a shaft which projects on either side where it is twice bent to a right angle to form a cranked handle. A rope is secured to the shaft and wound round it by turning a handle. By this means a load may be drawn along, or by passing the rope round an elevated pulley a weight may be lifted.

Winchcombe. Market town of Gloucestershire, England. It is situated in a valley of the Cotswolds, 7 m. N.E. of Cheltenham on the rly. S. Peter's is a 15th century church freely restored, and the whole town is architecturally celebrated. Near by is Hailes abbey. Pop. 2,741.

Winchell, WALTER (b. 1897). An American journalist. Born in New York, April 7, 1897, he joined a juvenile vaudeville company at 13, later appearing as an adult variety artist. In 1922 he joined the staff of the Vaudeville News, and from 1924 was dramatic critic of the New York Evening Graphic. In 1929 he transferred to the New York Daily Mirror, being engaged in the same capacity, but soon making a name by a daily column of sensational gossip, in which he discussed almost all aspects of events of the day. His "feud" with Ben Bernie was eagerly followed. Winchell also acted as a radio commentator and appeared in films.

Walter Winchell, American journalist

bour became choked; since then the town has dwindled in size, although until the Reform Act of 1832 it returned two members to parliament. Its buildings include the parish church of S. Thomas & Becket, a court house, town hall, and four of the old town gates. There is a rly. station. Pop. 150. For the peerage, see Winchelsea.

Winchester. City and co. town of Hants, England. It stands on the Itchen, 66 m. S.W. of London and 12 m. N. of Southampton, and has rly. stations. It is a market for the surrounding agricultural produce; a military centre, with barracks; and had its own M.P. until 1918, when it became part of a co. div. Pop. 22,969.

Winchester arms

The bishopric of Winchester ranks as one of the most important in the country. The cathedral, originally dedicated to S. Swithun, is the longest in England (526 ft.) and has some magnificent features, especially the nave. It is largely Gothic, but some Norman work survives. Early in the 20th century the foundations were found to be faulty and an extensive restora-

Winchester, Hampshire. The cathedral, the longest in England, viewed from Winchester College

tion scheme was completed. Of the other churches S. Swithun's, a tiny building over the King's Gate, is the most notable. Secular buildings include the ruins of Wolvesey Castle, official residence of the bishop; the city cross; and the county hall, wherein is the so-called round table of King Arthur. The West Gate stands at the top of High Street, and the only other relic of the fortifications is King's Gate leading to the close. One mile S. is the hospital of S. Cross (*q.v.*).

Winchester was a Celtic, and later a Roman settlement, its early name being Venta Belgarum. It

Winchester College arms

S. Mary at Winchester, and it has had from the first a close connexion with New College, Oxford, where scholarships are still reserved for Winchester boys. The nucleus of the school is the chapel, cloisters, quadrangle, and

other buildings of the 14th century still used by the 70 scholars. Around are newer buildings and the 10 houses in which live the commoners, about 400 in number. Classics are the chief subject of study, but mathematics, science, and modern languages are also taught. Winchester boys call themselves Wykehamists. The school motto is *Manners Maketh Man*. Sir

Herbert Baker designed a notable memorial of the First Great War. See St. Catherine's Hill.

Winchester, Hampshire. The high street, showing (right) the elaborate pinnacled 14th century Butter Cross

became the capital of Wessex, and was for a time the capital of England. Here the Anglo-Saxon kings held their court and here many are buried. William I built a castle here. Winchester had a large annual fair held on St. Giles's Hill, just outside the city. See Alfred; Almshouses; Austen, J.; Pilgrims' Way; Reredos. Consult Winchester, G. W. Kitchin, 1890.

Winchester, MARQUESS OF. An English title, the premier of its class. It has been borne by the family of Paulet (*q.v.*) since 1551, when Sir William Paulet, who held high office under Henry VIII and Edward VI, was promoted from earl. His descendant John (d. 1675), 5th marquess, was the nobleman who held Basing House for Charles I. His son Charles (d. 1699), 6th marquess, was made duke of Bolton in 1689, and from then until 1794 the two titles were united. That year Henry, 6th duke and 11th marquess, died without sons; the dukedom became extinct, but the marquessate passed to George Paulet (d. 1800), a descendant of the 4th marquess. The peerage came in 1899 to Henry (b. Oct. 30, 1862), 16th marquess, a soldier, who was president of the T.A., 1909-17. See Basing House.

Winchester College. English public school. Founded by William

of Wykeham in 1382, it is the oldest of the great schools, and on it the existing public school system has been largely modelled. Its full title is the College of

S. Mary at Winchester, and it has had from the first a close connexion with New College, Oxford, where scholarships are still reserved for Winchester boys. The nucleus of the school is the chapel, cloisters, quadrangle, and other buildings of the 14th century still used by the 70 scholars. Around are newer buildings and the 10 houses in which live the commoners, about 400 in number. Classics are the chief subject of study, but mathematics, science, and modern languages are also taught. Winchester boys call themselves Wykehamists. The school motto is *Manners Maketh Man*. Sir

Herbert Baker designed a notable memorial of the First Great War. See St. Catherine's Hill.

Winckelmann, JOHANN JOACHIM (1717-68). German art

critic. Born at Stendal, Saxony, Dec. 9, 1717, he studied theology, medicine, and mathematics, and in 1754 secured a librarian's appointment at Rome, where he devoted himself to the study of antiquities. The result was his *History of Ancient Art*, 1764, which gained him a cosmopolitan reputation. The first to describe the objects of art at Pompeii and Herculaneum, Winckelmann became superintendent of antiquities at Rome, but he was robbed and murdered at Trieste, June 8, 1768.

Winckler, Hugo (1863-1913). German Orientalist. Born at Gräfenhainichen, Saxony, July 4,

J. J. Winckelmann, German art critic

1863, he studied in Berlin, and attained the university chair of Oriental languages and history, 1904. He excavated Boghazköi, in Cappadocia, 1906-07, discovering a cuneiform version of the Ramesses-Hittite treaty, two temples, and many inscribed tablets, some since identified as Hittite. There is an Eng. trans. of his *History of Babylonia and Assyria*, 1907. He translated the Tell el-Amarna letters, 1896; the Code of Hammurabi, 1904; and made contributions to O.T. study. He died in April, 1913.

Wincoal. Low powdered permitted explosive, which gives rise to a large spreading effect, and at the same time reduces shattering, thus giving good quality coal. It is claimed that safety in the presence of fire-damp is increased with this class of explosive. The composition is 13-16 p.c. partly gelatinised nitroglycerine, 29-35 p.c. ammonium nitrate, 11-17 p.c. sodium nitrate, 3-5 p.c. wood meal, 36-39 p.c. sodium chloride. See Permitted Explosives.

Wind. Horizontal movement of air over the earth's surface, specified by its speed and the direction from which it blows. Near the ground the wind speed is generally expressed in knots, m.p.h., etc., or as a force on the Beaufort scale (see Gale), and in the free air in units of speed only; the direction is always understood as that from which it blows, and is expressed in compass points or in degrees measured from true North, e.g. E. = 90°, S. = 180°, W. = 270°. The habit of naming local winds according to their character, or some peculiarity associated with the direction from which they blow, has persisted to the present time, chiefly in the Mediterranean, where occur the Bora, from the N.; the Levanter and Ponente, from the direction respectively of the rising and setting sun; the Gregali, from Greece; the Mistral, the master wind; and the Sirocco, the hot southerly wind.

The force or speed of the surface wind is measured by means of an anemometer (*q.v.*). Direction recording is either directly or remotely from a wind vane. During and after the Second Great War radar superseded tracking pilot balloons with theodolites as a means of measuring upper winds. The speed of a steady wind can be measured by the force or pressure which it exerts on a plane surface at right angles to it. Experiments have shown that, for a circular

plate of about one sq. ft. in area and for air of normal density, $P = 0.003v^2$, where P is the pressure in lb. per sq. ft. and v the velocity in m.p.h. The relationship between mean wind speed, in m.p.h., and Beaufort force (F) is given by $v = 1.87 \sqrt{F^2}$.

In the British Isles, where continuous records of wind are available at nearly 50 meteorological stations, the average velocity over a period of one hour has rarely, if ever, exceeded 70 m.p.h., although gusts of 100 m.p.h. and upwards have been recorded. Gusts, i.e. short-period fluctuations resulting from interference by irregularities of the surface over which the air is flowing, are to be distinguished from squalls, sudden blasts of wind due to some meteorological cause and lasting usually for a few mins. before dying away as suddenly as they begin. Speeds greater than that of a hurricane have been recorded at the earth's surface, the greatest being 231 m.p.h. at a height of about 6,000 ft. on Mount Washington, U.S.A., on April 12, 1934.

Estimation of Wind Force

The estimation of the force of the wind, for meteorological purposes, is exceedingly difficult, since the wind at a particular place is never steady, but blows in a series of gusts and lulls with accompanying fluctuations of direction. In fact, the atmosphere may be regarded as usually in a state of turmoil, with hills, trees, houses, etc., obstructing the motion of the air, which often develops into eddies of varying size (see Turbulence). Thus the variation of wind in the lowest layers is governed by the turbulent interchange of momentum between the surface air and that sufficiently high (roughly 2,000 ft.) to be outside the influence of surface friction. As the various effects which wind produces locally during its travel, e.g. movement of trees, banging of doors, raising of waves on the sea, all dissipate some of its energy by converting it from a steady flow into eddy motion and ultimately into the irregular motion of heat, the speed of the wind generally increases rapidly with height until the undisturbed wind of the free air is reached. This rate of increase depends upon the extent of mixing, or turbulence, of the surface and higher layers, and is most marked when the mixing is least.

The effect of surface obstacles is well illustrated by a comparison of anemograph records on the roof

of the Air Ministry in London, and at the Bell Rock lighthouse, which has an open exposure to the sea in all directions. The latter records are by far the steadier; the gusts and lulls, being much less prominent, give the traces a narrower appearance. Above 2,000 ft. or so the variation of wind with height depends upon the variation of the pressure gradient with height, which, in turn, depends upon the distribution of temp.—determining the density and hence the pressure of the air.

At many land stations there is a well-marked tendency for the wind to increase in speed and veer (in the N. hemisphere) during the morning and afternoon, and decrease and back towards evening. This rise in speed is due to the increased mixing of the layers of air, caused by the heating up of the land and the resulting convection: momentum is thus transferred from the upper layers to the surface. The diurnal variation vanishes in cloudy weather, and at other times may be masked, e.g. by changes in the general pressure distribution. On the coast the effects of land and sea breezes introduce complication. Up to certain limits the upper wind is subject to a variation which is the reverse of that at the surface, since the momentum gained by the surface air during the daytime comes from the upper air. At the top of the Eiffel Tower (1,000 ft.) there are falls in wind speed in the middle of the day of about 5 m.p.h. in Jan. and 8 m.p.h. in July, compared with rises of about 2 m.p.h. and 4 m.p.h. respectively near the base.

The primary cause of wind is the differences in solar and terrestrial radiation, which set up irregularities of temp. and give rise to convection currents. The air is forced to move by gravity, sometimes working through the agency of pressure difference. Although at any place the wind is never constant in either speed or direction, there is a pronounced tendency for it to blow most frequently from one direction. These prevailing winds over the earth constitute a general circulation. In equatorial regions there is a belt, the doldrums, where low pressure calms, and light, variable winds are experienced. Towards this belt two great sets of winds blow from the horse lats, high pressure calms located about 30°-50° N. and S. of the equator. These are the trade winds, which blow equatorwards from the N.E.

Windermere, Westmorland, England. A remarkable air photograph of the lake taken by the infra-red process

in the N. hemisphere and from the S.E. in the S. hemisphere. From the horse lats. other winds, the westerlies, blow polewards. N. of the equator these are the south-westerlies; in the S. hemisphere they blow from the N.W., and are called the roaring forties or brave west winds, owing to their persistence in about lat. 40°. The monsoon winds are seasonal in character, the S.W. monsoon bringing rain to India in summer, whereas the N.E. monsoon is cool and dry. Various local winds, e.g. whirlwinds and tornadoes, hurricanes and cyclones, katabatic winds, e.g. Bora, and land and sea breezes, are superimposed upon this circulation. See Meteorology; Monsoon; Trade Winds.

A. J. Drummond, F.R.Met.S.

Wind Action. In geology, the action of wind in eroding, transporting, and depositing material. Wind in desert regions forms a natural sand-blast which is capable of wearing away and polishing outcropping rocks. Soft beds and zones of fracture or weakness are particularly susceptible to this attack; and differential weathering, in which more resistant rock stands out and weak rocks, etc., are fretted away, is highly developed. Hence rock exposures are often fantastically carved. Undercutting of rock masses is common because the main movement of wind-driven sand is near the ground. Undercutting of loose rock fragments causes them to tip over after a time, thus exposing fresh surfaces to the sand-blast.

Wind is directly responsible for the deposition of sand in dunes of various types. Light material is carried in air in suspension, and may be transported right out of the desert region as fine dust clouds. Such dust is later deposited as loess. Wind action is inhibited by vegetation, especially by grass,

which is sown extensively to prevent movement of dunes. Destruction of such protective covering has occurred in central U.S.A., Australia, E. Africa, etc., through excessive ploughing, monoculture, over-stocking of the land, fire, and other causes which allow wind action to work on the loose fine-grained soil, removing it from one region, leaving barren, stony ground behind, and depositing it elsewhere to suffocate crops. See Desert; Dune; Dust Bowl; Geology; Loess; Soil Erosion.

Windage. Term in gunnery for the leakage of propellant gases between the sides of the projectile and walls of the bore in rifles, guns, or cannon. Shell for use in cannon are fitted with driving bands, frequently constructed to form special gas-checks.

Windau. German name of the Latvian town Ventpils (q.v.).

Windaus, ADOLF (b. 1876). German chemist, born in Berlin on Christmas day, 1876. At school and university there, and at Freiburg, he first studied medicine, later chemistry. From 1915 he was professor and director of the general laboratory at Göttingen. His research work concerned cholesterin, stearines, glycosides, and from 1925 vitamins; he produced synthetically the anti-rachitic vitamin D. In 1928 he was awarded the Nobel prize for chemistry and the Pasteur medal.

Windhoek, S. W. Africa. General view of the town and capital of S. W. Africa

Windermere. Largest lake in England, lying wholly within Westmorland. Its length is 10½ m., and it covers nearly 6 sq. m., but does not exceed 1 m. in width. The places on its banks include Lakeside, at the foot, where the rly. touches it, Waterhead at the other end, and Bowness in the middle. Various short streams flow into it, and its waters flow by the Leven to Morecambe Bay. Steamers ply regularly on the lake. See Lake District.

Windermere. Urban dist. of Westmorland, England. On the E. shore of the lake, 4 m. S.E. of Ambleside, it has a rly. station, adjoins Bowness, and is the starting-place for excursions round the lake. It was called Birthwaite before the opening of the rly. The Church of St. Martin contains good 15th century stained glass and ancient paintings. Pop. 6,451.

Windfall. Anything blown down by the wind, such as fruit from trees. In English law, windfalls are trees, other than fruit trees, blown down by the wind. They belong to the landlord, unlike timber, which is the property of the tenant.

Windflower. Popular name for the wood anemone (*Anemone nemorosa*). See Anemone.

Windham, WILLIAM (1750-1810). British politician. Born May 3, 1750, and educated at Eton

William Windham, British statesman

and University College, Oxford, he became in 1783 secretary to the lord-lieutenant of Ireland. He was elected Whig M.P. for Norwich, 1784, and retained that seat for 18 years. A staunch follower of Pitt, he became secretary at war, with a seat in the cabinet, 1794-1801, and in 1806 was secretary for war and the colonies in Grenville's All the Talents ministry. He died June 4, 1810. *Consult* his Diary, 1784-1810, ed. Mrs. H. Baring, 1866.

Windhoek. The capital of South-West Africa. It is connected by rly.

with Walvis Bay, which lies 170 m. to W. The Germans made it the capital of their protectorate, and it remained so until entered by S. African forces, May, 1915. In Windhoek are govt. buildings, an

R.C. cathedral, and a Lutheran church; parks, gardens, and hot medicinal springs. Around Windhoek is pastoral country, with silver, copper, lead, and salt deposits. Pop. 18,770 (incl. 5,000 whites).

Wind Instrument. In music, instrument in which the vibrations are excited by the player's breath. They may be broadly classified as (1) Flute (flute, piccolo, flageolet, etc.), in which the air is directed against that part of the instrument known as the lip; (2) Reed (oboe, bassoon, clarinet, saxophone, etc.), instruments fitted with reeds, single or double; (3) Brass (trumpet, horn, trombone, cornet, etc.), in which the player's tensed lips act as reeds.

Wind in the Willows, THE. Nature story by Kenneth Grahame, first published 1908. It personifies various wild animals, led by the wondering Mole, the resourceful Water Rat, the gruff but kindly Badger, and the scatter-brained boastful Toad. Besides being a children's favourite (it was written for the author's son, killed in a rly. accident at 20), it is in graceful prose, rising to heights in a chapter on Pan. A. A. Milne made a dramatised version as *Toad of Toad Hall*, 1930, and the adventures of Toad were made into a Walt Disney cartoon film, 1950.

Windlass. Device for hoisting or hauling. It is used for raising weights, lifting water from a well, or on shipboard for raising the anchor. A common and simple form consists of a horizontal barrel for the hauling rope, supported in vertical standards, and rotated by a cranked handle. *See* Winch.

Windmill. Mill operated by the wind. Large windmills have four, five, or six arms, 20–50 ft. long, carrying sails. A sail may be canvas-backed by a wooden lattice attached to the arm, or a series of wooden slats arranged transversely. The old-fashioned post mill, which revolved as a whole on a central vertical pivot, embedded in a masonry base, has been superseded by the tower mill, with a fixed body and a revolving top. In this latter type the sails are kept square to the wind automatically by a fantail at the rear, driving the top through gearing. The sail-shaft, inclined upwards at an angle of about 10° to the horizontal, has a large toothed wheel on its back end, engaging with another wheel on the vertical shaft of the mill, or, if the sails drive a pump, on a secondary crank-shaft.

Excepting those used for draining fens, pumping windmills are

generally of the American or annular type. The wind wheel has a number of curved sheet-metal vanes set closely together on two rungs attached to the arms of the wheel, the combined

Windmill. Left, tower type in which revolving top (A) is turned by fantail (B) to keep sails in the wind. Right, American or annular type, used for pumping

projected area of the vanes being two-thirds or more that of the tip circle. The wheel-shaft revolves in plain or ball bearings in a rotating head pivoted centrally on a light wooden or steel lattice tower. A reduction gear and crank-shaft transmit power to the pump-rod.

Windmill Theatre. London playhouse, in Great Windmill Street, W.1. It was opened Feb. 4, 1932, under the ownership of Laura Henderson (d. 1944), with Vivian Van Dam (later proprietor) as producer and general manager. It became celebrated for continuous variety programmes entitled *Revuedeille*, consisting of six performances daily, with a change of programme every six weeks. Throughout the Second Great War the theatre, which seats 320, lived up to its slogan, "We never closed."

Window (old Norse *vindauga*, wind-eye). In a building, an opening in the wall for the admission of light and air; in modern usage, such an opening filled with glass.

Tracery enormously enhanced the importance of the window as an architectural feature, and the traceried window developed rapidly to its first climax, about the middle of the 13th century. From being a narrow slit in the wall, the Gothic window rapidly increased in width, and as the needs of private houses asserted themselves in addition to those of churches, the single fixed light gave place to elaborately fitted

casements with leaded panes. By the end of the 14th century immense windows, divided into many lights, gave opportunity for new devices of tracery.

Renaissance influences in the 16th century asserted the square-headed type as the only one for Europe, though during the Tudor period the division of lights by mullion (*q.v.*) and transom (*q.v.*) gave the British window a purely national character. It was not before the middle of the 19th century that the large shop-window of plate-glass was much seen in the great European capitals. *See* Clerestory; Dormer; Glass; Gothic Architecture; Lattice; Rose Window; Stained Glass; Tracery.

Window Tax. In Great Britain, a tax on windows in houses containing more than six. It was first imposed in 1695, and was increased six times between that year and 1815. Some reduction was made in 1823, and the tax was repealed in 1851. To escape payment people often bricked up their windows; such closed windows are to be observed in many old houses.

Windpipe. Part of the air passage situated between the larynx and the bronchi. *See* Trachea.

Wind River. Mountain range of the U.S.A., in the W. of Wyoming. A division of the Rocky Mountain system, it trends N.W. to S.E. and forms a watershed of rivers flowing to the Pacific and Atlantic basins. Many of its summits reach above 13,000 ft., Fremont Peak, the loftiest, attaining 13,790 ft.

Windrush. River of Glos and Oxon, England. It rises in the Cotswolds, E. of Winchcombe and W. of Moreton-in-the-Marsh, and flows in a S.E. course to join the Thames below Standlake. Its length is about 38 m. Well-known towns upon its banks are Bourton-on-the-Water, Witney, and Burford.

Windscreen. Transparent panel in front of the driver on a motor vehicle which gives protection from the elements and allows the driver and passengers to see the road ahead. It is so called because on the open bodies of early cars it was in fact merely a screen projecting upwards from the body. Nowadays it forms the front panel extending from the scuttle to the front rail of the roof. Glass must by law be unsplinterable, and is usually carried in a metal frame hinged at the top so that it can be opened, though it may be a fixed panel. To ensure visibility in fog hot air is led from the car heater close to the surface of the glass.

WINDSCREEN WIPER. To ensure that the glass of the windscreen is kept clear of rainspots or snow, there is provided a thin rubber blade with a metal backing, which is pivoted to a moving arm. The arm is attached on the end of the spindle, which is given a reciprocating motion through suitable gears from a small electric

Windscreen. Working arrangement and components of an electrical windscreen wiper

motor, so that when the driver switches on the wiper the blade sweeps a wide arc on the glass immediately in front of him. Another form of wiper is actuated by a simple pneumatic device connected by a small bore tube to the induction system of the engine so that suction causes a piston to move to and fro.

Windsor, Nsw. Royal and mun. bor. and market town of Berks, England. On the right bank of the Thames, 22 m. W. of London, it is served by rlys. and is a Green Line bus terminus. It is connected by bridges with Eton and Datchet.

Windsor arms

Once a chapelry of Clewer, Windsor was made a free bor. and given a market by Edward I. Its buildings include the town hall, completed by Wren, 1686; parish church of S. John the Baptist, rebuilt 1822, interior remodelled 1869; garrison church of Holy Trinity, 1842; royal mews; and a museum with Shakespeare relics. Windsor gives its name to a co. constituency. The castle (including its Great Park) is separately described. Market day, Sat. Pop. 19,940. *Consult Annals of Windsor, R. R. Tighe and J. E. Davis, 1858.*

Windsor, O.R. Village of Berks, England. It is 2 m. S.E. of the town and castle of the same name,

and was anciently known as Windlesore, Wyndeshour, or Wynd-sore, i.e. winding shore. Edward the Confessor, who had a palace here, presented the surrounding land to the abbot of Westminster, from whom it was obtained, in exchange for some lands in Essex, by William I. Remains of ancient buildings, supposed to be part of the Confessor's palace, were discovered in 1919.

Windsor. Town of New South Wales, Australia. It stands on the Hawkesbury river 34 m. by rly. N.W. of Sydney. The state agricultural college is near here. Pop. 3,360. Another Windsor is a suburb of Brisbane.

Windsor. Town and river port of Nova Scotia, Canada. It stands at the mouth of the Avon, where it falls into Minas Basin, in

Hants co., 46 m. N.W. of Halifax, and is the junction of the Midland rly. with the Dominion Atlantic rly. Its industries include shipping. Much gypsum is found in the locality. Here is King's College (q.v.). In 1919 the business part of the town was destroyed by fire. Pop. 3,436.

Windsor. City and lake port of Ontario, Canada. It stands on the Detroit river, just opposite Detroit, U.S.A., in the extreme S.W. of the prov., 228 m. S.W. of Toronto. It has stations on the C.N.R., the C.P.R., Michigan Central, Wabash, and Pere Marquette rlys., has electric rly. in the streets, and is connected with Detroit by the Ambassador Bridge and a tunnel under the river and a steam ferry on it. Steamers go from Windsor to the ports on the Great Lakes and the St. Lawrence. The industries, for which electric power is derived from Niagara, include making motor cars, paint, machinery, iron and steel goods, flour, and bricks. The pop. of 105,311 makes it the eighth biggest city in Canada.

Windsor. Family name of the royal house of Great Britain. The royal family (q.v.) belongs, by virtue of the marriage between Victoria and Albert, to the German family known as the house of Saxe-Coburg-Gotha, itself a scion of the family of the dukes and kings of Saxony, known also as that of Wettin. On July 17, 1917, George

V by proclamation declared that henceforward his family should be known as "the house and family of Windsor." By the birth of a son to Princess Elizabeth in 1948 it became probable that she would be the last sovereign of that house and her successor the first of another.

Windsor, EDWARD ALBERT CHRISTIAN GEORGE ANDREW PATRICK DAVID, DUKE OF (b. 1894). British prince, formerly Edward VIII, king of Great Britain and Northern Ireland and the British overseas dominions, emperor of India. He was born at White Lodge, Richmond Park, Surrey, June 23, 1894, eldest child of the duke and duchess of York, afterwards King George V and Queen Mary. He was a naval cadet at Osborne from 1907 and at Dartmouth from 1909. On his father's succession to the throne, 1910, he became duke of Cornwall, and on his 17th birthday was invested at Carnarvon Castle as prince of Wales, being created K.G. the same year. In 1912 he entered Magdalen College, Oxford. Gazetted to the Grenadier Guards on the outbreak of the First Great War, he was soon, in deference to his ardent desire for service overseas, appointed A.D.C. to Sir John French, and was frequently under fire on the western front. He served on the staff of the Mediterranean Expeditionary Force in Egypt, 1916; on the Italian front, 1917-18; and with the Canadian corps in 1918.

After the war he undertook a series of imperial and world tours which were a marked personal success as well as of considerable practical value in cementing the bonds of empire. The most important were to Canada, 1919; Australia, New Zealand, West Indies, 1920; Malta, India, Ceylon, and Far East, 1921; Africa and S. America, 1925; Canada again (with Stanley Baldwin, the prime minister) for the 60th anniversary of the founding of the dominion, 1927; E. Africa (with the duke of Gloucester), 1928, a tour cut short by his father's critical illness; E. Africa again, 1930; Argentina, 1931. Everywhere his remarkable personal charm and his obvious preference for informality brought an enthusiastic reception. In

Royal House of Windsor arms

Canada he purchased and stocked his own ranch.

At home, in addition to the unending routine functions demanded of royalty, he identified himself especially with the views and needs of his fellow ex-Servicemen, becoming president of the British Legion and also closely associated with Toc H. Secondly, and even more notably, he showed a great understanding of, and human sympathy with, the growing mass of unemployed workers and slum dwellers. His more personal pursuits revealed him as a prince with tastes in sport, recreation, and entertainment akin to those of most of his generation.

He became king on the death of his father, Jan. 20, 1936. No man ever succeeded to the throne at a higher level of popular esteem or aroused greater expectations.

But his reign was to be one of the shortest in British history. It ended with his abdication, Dec. 10, 1936 (to take effect from the next day), in order to be free to marry the woman of his choice. This was Mrs. Ernest Simpson, an American with whom he had been friendly for some years. When the king went on a private holiday cruise in the Adriatic during the summer, she accompanied him. Later in the year she divorced her husband, as she had divorced a previous husband. The British press was aware of this friendship but made no mention of it. The U.S. press, far less reticent, eventually announced that the king would marry Mrs. Simpson. On inquiry, the prime minister, Stanley Baldwin, was told by the king that this was true. Knowing that a woman who had been twice previously married was unlikely to be accepted by the U.K. or the dominions as a queen consort, the king sought an opinion on the possibility of a morganatic marriage by which she might be his wife but not queen. But such a position was unrecognized in the constitution, and he was therefore faced with the alternative of renouncing Mrs. Simpson or renouncing the throne. He chose the latter, explaining in a broadcast immediately after the abdication: "I have found it impossible to carry the heavy burden of responsibility and discharge my duties as king as I would wish to do without the help and support of the woman I love."

The most significant event of the short reign of this king who was never crowned was his visit to the distressed areas of the S. Wales coalfields. Appalled by the con-

ditions in which unemployed miners were living, he gave them the promise: "Something will be done." But the abdication intervened.

He was succeeded by his brother George VI, who at once created the ex-king duke of Windsor. The duke left the country immediately after his broadcast and lived privately in Austria and France until his marriage, June 3, 1937, a private ceremony, at Tours, France. He did not visit Great

H.R.H. the Duke of Windsor, formerly King Edward VIII, and the Duchess of Windsor

Britain again until just after the outbreak of war in 1939, when he volunteered for army service, and was attached to the staff of the B.E.F. with the rank of major. From 1940 to 1947 he was governor of the Bahamas.

The duchess of Windsor was born at Baltimore, Maryland, in 1896. As Bessie Wallis Warfield she was married in 1916 to E. W. Spencer, a U.S. naval officer, whom she divorced 1925. She came to England in 1926; and was married 1928-36 to Ernest Simpson, a shipbroker. In 1937 she reverted to her maiden name of Warfield. Her marriage to the duke of Windsor did not entitle her to the style of H.R.H. Consult King Edward VIII, his Life and Reign, H. Bolitho, 1937; Edward VIII, Duke of Windsor, B. Maine, 1937; His Was the Kingdom, F. Owen and R. J. Thomson, 1937; The Duchess of Windsor, E. H. Wilson, 1937; The Windsor Tapestry, C. Mackenzie, 1938.

Windsor Castle. Royal palace of England. Situated on an eminence overlooking the valley of the Thames and the town at its base, it covers, with its grounds, about 12 acres, and is divided into a lower ward, middle ward, and upper ward or quadrangle. In the centre is the Round Tower or Keep; the state and private apartments are on the N.E. and E.

Founded by William I on the site of an earlier fortress, and largely rebuilt and added to by William of Wykeham for Edward

III, Windsor Castle was extended and renovated by George III and IV and Victoria. S. George's chapel, a beautiful example of Perpendicular Gothic, was begun by Edward IV and completed by Henry VIII, who was buried here, as were Jane Seymour, Charles I, George III, George IV, William IV, Edward VII, and George V. In the choir, separated from the nave by a modern altar screen, are the stalls and insignia of the knights of the garter. The vaulting of the chapel, a building 232 ft. long by 66 ft. wide, is fan-shaped. The Albert memorial chapel, built by Henry VII, was converted into a memorial of the prince consort.

The residential parts of the castle, library, etc., form a rich storehouse of artistic and other treasures. An unusual feature is Queen Mary's Doll's House (see Doll's House). The Round Tower dates from the time of Edward III. In the Home Park, lying N. and E., and about 4 m. in circumference, are Frogmore (q.v.) House, dairy, and Shaw Farm. The Great Park lies to the S.; its Long Walk runs in a straight line for nearly 3 m. in the direction of Virginia Water (q.v.). Farming of much of its 1,800 acres began in the Second Great War, and when it was decided to continue this practice the famous herd of fallow deer founded by Charles II had to be dispersed, 1950. In the park is Royal Lodge. Consult Romance of Windsor Castle, H. Bolitho, 1947.

Windsor Forest. A hunting ground of William I, a fragment of which still exists on the W. side of Windsor Great Park, Berks. Said originally to have been 180 m. in circumference, it was deforested in 1814.

Wind Tunnel. Structure of tubular form in which models (or actual aircraft) are subjected to artificial winds. The first apparatus of the kind was built by the Wright brothers.

Windward Islands. Southern division of the Lesser Antilles, West Indies. They comprise the British colonies of Dominica, St. Lucia, St. Vincent, Grenada, and the Grenadines (half under St. Vincent and half under Grenada), forming the E. barrier to the Caribbean Sea, between Guadeloupe and Trinidad. Though the Windward Islands form one group under a governor and commander-in-chief, each island has its own institutions, laws, revenue, tariffs, etc. They have a common court of appeal and unite for certain other common purposes. Sugar, cocoa,

1. General view from the left bank of the Thames, showing (L. to R.) the Round Tower, S. George's Chapel, and the Curfew Tower. 2. Interior of S. George's Chapel, with the stalls of banners of the Garter knights. 3. The Round Tower and S. George's Gateway

WINDSOR CASTLE: FOR EIGHT CENTURIES THE HOME OF ENGLAND'S SOVEREIGNS

rum, spices, cotton, arrowroot, and timber are the chief products. The total area is about 800 sq. m. Pop. 262,000, mostly negroes. See West Indies; also islands named.

Wine. The fermented juice of fresh grapes gathered and pressed in their country of origin. Ancient civilizations such as the Egyptian, Assyrian, Greek, and Roman had a knowledge of wine. The vine is indigenous to a number of countries where there is sufficient sunshine to bring its fruit to maturity.

To make wine the grapes should be harvested when perfectly ripe and dry, then crushed so as to express the juice. The pressing is done either by treading or by a machine (called in France a *fouloir-égrappoir*). Grapes contain some 98 p.c. of water and sugar, the proportion being nearly four times more water than sugar, and two p.c. of various salts, acids, and other substances, with no evidence whatever of alcohol. The juice of the grape is drained off after the

treading or pressing. An operation termed (in France) *débourbage* follows and consists of separating all impurities from the must before fermentation. These impurities are, usually, the débris of the skins, pulp, pips, etc., and dust or injurious matter of any kind.

Grape juice at first becomes turbid or turbid. In a rising temp., it forms carbon dioxide (carbonic acid gas), which escapes so that the juice, or must, seems to be boiling or effervescing. At this stage it consists of about 90 p.c. water and 10 p.c. alcohol. Pasteur showed that fermentation requires the presence of microscopic living organisms or "yeast." A certain species of these organisms called *Saccharomyces ellipsoideus* lives on grape juice. It forms the bloom on ripe or ripening grapes freshly gathered in suitable weather, and exists in tremendous numbers on the skins. It sets to work directly the grapes are pressed and the juice is running out, and turns

must into wine. Rain washes off *Saccharomyces*, hence in rainy seasons the must is generally not sufficiently activated and poor wine results.

Fermentation, or vinification, is a process of chemical change. It will take place in open or closed vessels, wooden vats and sometimes glass-lined cement vats or tanks being generally used. In the making of red wines the skins are allowed to remain in the must. White wines can be made from white grapes or from black grapes having white juice, or both, but no red wine can be made from white grapes. The skins of black grapes, which contain the colouring matter, are not allowed to remain in the must for white wines.

The conservation of a dry white wine differs little from that of red wines. The period before maturity is reached differs according to the wine. Tartaric acid is present in all wines made from grapes. The astringent principle is tannin, more

especially in red wines. A well-made wine should contain sufficient tartaric acid and tannin. If a wine is bottled whilst it is fermenting, the carbonic acid gas will try to escape unless the corking is sufficient to hold it in the wine. When the bottle is opened and the wine poured out, it will, if properly made, form a *mousse*, i.e. it bubbles, as the gas leaves the wine and escapes into the atmosphere. Both still and sparkling wines can be made out of almost all varieties of grapes. France, in normal years, produces more than a third of all the wine produced in Europe. Other important wine-producing countries are Germany (in particular the Moselle and Rhine valleys), Spain (notably sherry), Portugal (port), Italy (chianti, barolo, lacrima Christi, and many wines in small quantity which are unknown abroad), Hungary (Tokay), Algeria, S. Africa, California, and Australia. See Bordeaux; Burgundy; Champagne; Claret; Hock; Moselle; Port; Sherry, etc. *Consult* Notes from a Cellar Book, G. Saintsbury, 1920; Handbook of Wine, W. J. Todd, 1922; Wine and Wine Lands, F. Hedges Butler, 1926; Encyclopædia of Wine, A. L. Simon, 1946.

Wing. Organ of flight in bats, birds, and insects. In the bats it consists of an extraordinary lengthening of the finger-bones, over which, when outspread, is stretched a web of skin, which is continued backwards to include the hind legs from the ankle upwards and the greater portion of the tail. In the bird the fore-limb is lengthened, certain bones are united, and only three of the fingers are represented. The movements of the wing are controlled by powerful muscles attached to the keeled breast-bone. In insects, wings are not modifications of limbs; they consist of thin horny membranes, variously strengthened by ribs or network of firmer material, and may be naked or covered with minute scales or hairs. There are usually two pairs, but in flies (Diptera) there is one.

Wing. Operational division of the R.A.F. It normally consists of three squadrons of aircraft of a specific type; fighter, bomber, or transport. For administrative purposes and at training schools, personnel at air stations are divided into wings.

Wingate, ORDE CHARLES (1903-44). British soldier. Born Feb. 28, 1903, he was educated at Charterhouse and Woolwich and commissioned in the Royal Artillery in 1923. After service with the

Sudan defence force, 1928-33, during which he became fluent in Arabic and gained a profound

O. C. Wingate,
British soldier

knowledge of Middle East affairs, he was promoted captain in 1936 and sent to Palestine and Transjordan. The mufti of Jerusalem was supporting bands of disaffected Arabs and Syrians who were causing widespread disturbances. Wingate was given the task of restoring order, and he organized, trained, and led a force of Jewish volunteers. By 1938 he had restored order in the area of the oil pipe-line and on the N. frontier; and was awarded the D.S.O.

At the outbreak of the Second Great War, he was commanding an A.A. battery in Kent, but at the request of Gen. Wavell was posted to the Middle East and successfully commanded a force of guerrillas raised to assist the Allies against the Italians in Abyssinia (see East Africa Campaign). During the retreat from Burma early in 1942, Wingate, again at Wavell's request, raised guerrillas there. The long-range jungle force he built up was the strategic conception upon which the ultimate Burma campaign was based. Wingate's presence in Burma, and the nature of his operations, were among the best kept secrets of the war; not until May, 1943, was any official statement released. It was then announced that his force, called Chindits, had arrived in India from N. Burma after spending three months as wreckers in Japanese-controlled territory.

Consisting of British and Gurkha columns with intelligence and reconnaissance units from the Burma Rifles, Wingate's force penetrated hundreds of miles across jungles and valleys. The rivers Chindwin and Irawadi were crossed and the Myitkyina rly. was cut in some 80 places. Skilfully infiltrating through the chains of Japanese outposts and garrisons, the force operated as far as the Shan States.

Wingate made a great personal impression on Winston Churchill, who took him, still clad in his jungle drill, to the Quebec and Washington conferences of 1943. There he met Lord Louis Mountbatten, who encouraged his ideas and promised unlimited support. In March, 1944, a second Chindit expedition,

on a much larger scale, went into Upper Burma under Wingate, promoted maj.-gen. Soon after 12,000 men had been successfully planted in the heart of Japanese-occupied territory, Wingate was killed in an aeroplane accident, March 24, while visiting forward positions held by his raiders between Silchar and Imphal. In 1947 his body was recovered and buried with military honours.

Wingate based his operations on the assumption that Japanese troops were methodical; he always presented them with the unexpected, and that policy played the major part in the success of his two expeditions against them. In military outlook he combined the qualities of scientist and guerrilla; he was solitary, elusive, and without regard for orthodox military caution. He had extensive literary knowledge, and his military orders and proclamations invariably contained quotations from poetry and the Bible. See Chindits. *Consult* Wingate's Phantom Army, W. G. Burchett, 1947.

Wing Commander. Commissioned rank in the R.A.F. Its holder ranks immediately above a squadron leader and below a group captain. The insignia consists of three rings of equal width.

Wingfield Sculls. Sculling race which forms the English amateur sculling championship. Instituted in 1830, it is rowed annually in July on the Thames, from Putney to Mortlake, over a course of 4½ m. Best time is that of L. F. Southwood, 21 mins. 11 secs., in 1933. See Sculling.

Wingfield - Stratford, Esme Cecil (b. 1882). English historian. Born Sept. 20, 1882, he went from Eton to King's College, Cambridge, and in 1904 took a research post at the London School of Economics, being also a fellow of King's, Cambridge, from 1907. His special interests were reflected in many books, e.g. History of British Civilization, 2 vols., 1928; Victorian Sunset, 1932; King Charles and the Conspirators, 1937; Charles King of England, 1948.

Winifred OR WINEFRIDE (Welsh *Gwenfrewi*). Legendary Welsh saint and martyr. She is said to have lived in the 7th century, and to have been beheaded by Caradoc, son of King Alan, because she refused his suit. She is commemorated in the R.C. church on Nov. 3. See Holywell; St. Winefride's Well.

Winkelried, ARNOLD VON. Swiss national hero. At the battle of Sempach, July 9, 1386,

he is said to have gathered into his own breast the lances of several Austrian soldiers, so as to make an opening in their line for his attacking compatriots, and thus sacrificing his life. It was discovered in 1866 that an historical personage of the same name, commanding Swiss mercenaries at Bicocca, 1522, actually performed the sacrifice. See Sempach.

Winkle. Popular name for the edible marine snail, correctly called Periwinkle (*q.v.*).

Winkle, NATHANIEL. Character in Dickens's *Pickwick Papers*. One of Mr. Pickwick's constant companions in his peregrinations, he claims to be a sportsman, but incurs ridicule by his ludicrous failure to shine as rider, shot, or skater. The character was introduced as a concession to the original illustrator, Seymour, who had some reputation as a sporting artist, and whose original proposal for the work, made to the publishers, was that it should deal with the adventures of a Cockney sporting club.

Winnington-Ingram, ARTHUR FOLEY (1858-1946). British prelate. Born Jan. 26, 1858, and

A. F. Winnington-Ingram,
British prelate
Russell

educated at Marlborough and Keble College, Oxford, he was first a curate of S. Mary's, Shrewsbury; private chaplain to the bishop of Lichfield, 1885-88; head of Oxford House, Bethna. Green, 1888-97. Rector of S. Matthew's, Bethnal Green, 1895-97, he was then bishop suffragan of Stepney and canon of S. Paul's until in 1901 he succeeded Creighton as bishop of London. Unconventional, sympathetic, tireless, and strong in his championship of social causes, Dr. Winnington-Ingram was one of London's most popular bishops. He resigned in 1939 and died May 26, 1946. His writings included *The Eyes of Flame*, 1914; *The Church in Time of War*, 1915; *The Potter and the Clay*, 1917; *Rays of Dawn*, 1918; *The Spirit of Peace*, 1921; *Some Recollections of a World Tour*,

1923. Consult *Life*, S. C. Carpenter, 1949.

Winnipeg. River of Manitoba, Canada. It flows as a turbulent, winding stream for 163 m. W. from Lake of the Woods to Fort Alexander, where it enters Lake Winnipeg.

Winnipeg. Lake of Manitoba, Canada. Area, 9,400 sq. m.; length, 260 m. It receives the Red river from the S., the Saskatchewan from the W., and other streams. It is a popular tourist resort. Lakes Manitoba and Winnipegosis send their waters down to Lake Winnipeg, whence the Nelson flows to Hudson Bay.

Winnipeg. Capital of Manitoba, and the fourth largest city in Canada. It stands on a plain at the junction of the Red river and the Assiniboine, is 1,414 m. W.N.W. of Montreal, and 60 m. from the U.S. boundary. It is the western

h.q. of the C.P.R. and the C.N.R. The Hudson Bay rly. to Churchill via Le Pas, built to carry wheat, reduced by 500 m. the route from Winnipeg to Liverpool.

The streets are wide and straight. The buildings include the city hall,

parliament buildings, general hospital, Tuxedo military hospital, Union station, colleges of the university of Manitoba, and many fine churches. Winnipeg is the great grain market of the west, and distributing centre for the prairie provinces. It has lumber yards, flour mills, foundries, and makes boxes, bricks, confectionery, vinegar, and aerated waters, while there are printing, lithograph,

Winnipeg, Canada. 1. The province of Manitoba's parliament building. At the right is a monument to Sir George Cartier. 2. City Hall. 3. Portage Avenue, principal business thoroughfare of the city, looking west from Main Street
National Film Board of Canada

Winnipeg, Canada. Plan of the business quarter and central districts of the capital city of Manitoba

and bookbinding establishments. Electric power for its industries comes from the Winnipeg river, and its water supply from Lake of the Woods. In May, 1950, in one of the worst floods in Canadian history, one-eighth of the city was inundated when the Red river rose some 30 ft. above normal level; 81,000 people were evacuated, and damage was estimated at over \$50,000,000.

Fur traders erected a trading post here before 1763, and early in the 19th cent. a more extensive one called Fort Garry was put up. Round this a group of houses sprang up after 1850 and, named Winnipeg, became a city in 1879. Fur auctions are still held regularly. Pop. 229,045.

Winnipegosis. Lake of Canada. In the S. of the prov. of Manitoba, it covers 2,080 sq. m. Various rivers, including the Mossy, Swan, and Red Deer, flow into it, while the Waterhen connects it to Lake Manitoba. Its greatest length is 130 m., its coastline c. 570 m.

Winnowing. Process of removing chaff and other impurities from grain and seeds by the action of a current of air. The work was at first left to the wind, but since about 1800 machinery has been used. See Agriculture.

Winona. City of Minnesota, U.S.A., the co. seat of Winona co. It stands on the Mississippi, about 100 m. S.E. of St. Paul, and is served by the Chicago, Milwaukee, and St. Paul rly. and other lines. About the wealthiest city for its size in the U.S.A., its industries have included lumber, shipping, brick making, wheat exporting, and meat packing. The dominant element is New England stock, with German settlers arriving later. Broad residential streets are lined with elms and maples; the grounds of colleges and religious institutions are designed as landscape gardens. Winona was settled four years before it became a city in 1857. Pop. 22,490.

Winsford. Urban dist. of Cheshire, England. It stands on the Weaver, 3½ m. W.S.W. of Middlewich, and has three rly. stations. It is a centre of the salt industry, the salt being carried by river to Liverpool. There are iron and steel works, while abrasives and clothes are made. Here are a guildhall, library, grammar school, and infirmary. At Over is the ancient church of S. Chad, while Vale Royal was once a Cistercian abbey. Pop. est. 11,640.

Winslow. Town of Bucks, England. Situated between Aylesbury and Buckingham, 10 m. N. by W. of the former, it is on the rly. from Oxford to Blethley. Winslow is an agricultural town, formerly the centre of a lace-making industry. Pop. 1,532.

Winslow, EDWARD (1595-1655) Pilgrim father. Born at Droitwich, Oct. 18, 1595, he went to Leyden

Edward Winslow,
Pilgrim father

in 1617, returning to England three years later to sail in the Mayflower (q.v.). He was elected governor of Plymouth colony, 1633, 1636, and 1644. In 1623, 1624, and 1635 he sailed to England as agent for the colonists, and in 1646 again crossed the Atlantic, to defend them against a charge of religious intolerance. In 1655 Cromwell appointed him chief civil commissioner on the naval expedition to the West Indies, but Winslow died at sea on May 8. See Pilgrim Fathers.

Winslow Boy, THE. Play by Terence Rattigan. Produced at the Lyric Theatre, London, May 23, 1946, this piece followed closely the Archer-Shee episode of 1908. In the play a cadet at Osborne, accused of stealing a 5s. postal order, is expelled by the authorities; his father, ignoring ridicule, persuades an eminent barrister to proceed by petition of right to establish the innocence of his son, who is completely vindicated. The chief parts were taken by Frank Cellier, Angela Baddeley, and Emlyn Williams. In a film version directed by Anthony Asquith, 1948, they were played by Sir Cedric Hardwicke, Margaret Leighton, Robert Donat.

Winstanley, HENRY (1644-1703). English engineer. Born at Saffron Walden, March 31, 1644, he became clerk of the works to Charles II, 1666. In 1696 he designed the Eddystone lighthouse, and while engaged on erecting it was captured by a French privateer. On his release he continued the building, which he completed in 1700. The lighthouse was chiefly of wood, and in a storm on the night of Nov. 26, 1703, Winstanley lost his life in its total destruction. See Eddystone.

Winstler, REGINALD THOMAS HERBERT FLETCHER, 1st BARON (b. 1885). British politician. He

was born March 27, 1885, and after passing out of H.M.S. Britannia, entered the Royal Navy and served in the First Great War. Lieut.-Cmdr. Fletcher represented Basingstoke as Liberal M.P., 1923-24, but joined the Labour party in 1929, and sat for Nuneaton, 1935-41, being raised to the peerage in 1942. Minister of Civil Aviation in the Attlee govt. of 1945, he was appointed governor and c.-in-c. of Cyprus next year, but resigned in 1949 when he found that his efforts to secure acceptance of a new constitution for that island had proved unavailing.

Winston-Salem. City of North Carolina, U.S.A., the co. seat of Forsyth co. It is 112 m. by rly. W. of Raleigh. Two Moravian communities, settled in 1753, combined in 1913 to form the present city, which became the state's leading industrial centre. A first tobacco factory was opened in 1872, and cigarette and tobacco production has risen to an annual value of about £750,000. Textile mills provide the second largest industry. Negroes, forming 42 p.c. of the pop. of 79,816, live chiefly in the older municipalities; wealthier whites in near-by Salem.

Winter. Fourth and last season of the year. In northern latitudes it extends astronomically from the winter solstice (about Dec. 21) to the spring equinox (about March 21). South of the equator winter corresponds to the northern summer. In Great Britain winter comprises Dec., Jan., and Feb.

Winter, JOHN STRANGE. Pen-name of Henrietta Eliza Vaughan Stannard (1856-1911), British novelist.

She was born Jan. 13, 1856, at York, daughter of H. V. Palmer, rector of S. Margaret's. Educated at Bootham House, she began writing tales of military life quite young; her pen-name was taken from a character in her first book, *Cavalry Life*, 1881. In 1884 she married Arthur Stannard, and in 1885 published *Bootles' Baby*, which established her reputation. She died Dec. 14, 1911.

Winter Aconite (*Eranthis hyemalis*). Perennial herb of the family Ranunculaceae. A native of W. Europe, it has a stout creeping rootstock, from which arise the round, lobed leaves. The

John Strange Winter,
British novelist

Winter Aconite. Rootstock, leaves, and cup-shaped flowers with bracts

flowers are solitary, pale yellow, and cup-shaped at the summit of a tall stem, with a couple of broad bracts below the flower. The plant flowers from Jan. to March.

Winter Berry OR BLACK ALDER (*Ilex verticillata*). Shrub of the family Aquifoliaceae. Found native in N. America, it grows to a height of six feet, and has alternate, long, lance-shaped leaves with toothed edges. The small white flowers are succeeded by red berries, about $\frac{1}{4}$ in. in diameter. The bark is bitter and has been used medicinally.

Winter Berry. Leaves and small red berries

Winterborne. First name of 17 villages in Dorset, England. They lie in the middle portion of the co., from W. of Dorchester to near Blandford. Winterborne Whitchurch was the birthplace of George Turberville; William Barnes was rector of Winterborne Came. It is to be noted that the variant spelling Winterbourne is used in Wilts and Glos.

Winter Cherry (*Physalis alkekengi*). Perennial herb belonging to the family Solanaceae, native of the Caucasus and China. It has a creeping rootstock and scarcely branched stems. The leaves are wedge-shaped oval on long stalks, and the calyx becomes enlarged, inflated, and red after the white corolla has dropped.

The fruit is a round edible berry of a scarlet colour, hidden in the bladder-like calyx.

Winter Garden Theatre. London playhouse in Drury Lane, W.C.2. Built on the site of the Middlesex music hall, it was opened May 20, 1919, under the management of George Grossmith and Edward Laurillard, the opening production being the musical comedy *Kissing Time*, which ran for 430 performances. The theatre became noted for musical pieces, the best-known of which included *Sally*, 1921; *The Cabaret Girl*, 1922; *Tip-Toes*, 1926; *The Vagabond King*, 1927; *It's Time to Dance*, 1943; *The Kid from Stratford*, 1948. Donald Wolfit appeared here in Shakespearian seasons during 1945-46. The theatre seats 1,800.

Wintergreen (*Pyrola*). Small genus of evergreen perennial herbs of the family Ericaceae. Natives

Wintergreen. Sprays of flowers and leaves of *Pyrola rotundifolia*

of Europe, Asia, and N. America, they have creeping rootstocks, from which grow most of the leathery leaves. The white, pink, or yellowish flowers are globular in form, and are mostly in sprays terminating the upright scapes.

Wintergreen Oil. Essential oil with a strongly aromatic odour obtained by distilling the leaves of *Gaultheria procumbens*. The oil is

Winter Cherry. Left, spray of flowers and leaves: right, fruit

also known as oil of gaultheria. It consists chiefly of methyl salicylate, which can be made synthetically by heating methyl alcohol and salicylic acid together in the presence of sulphuric acid.

Winterhalter, FRANZ XAVIER (1806-73). German painter. Born at Menzenschwand, Black Forest, April 10, 1806, he studied painting at Munich, and in 1828 moved to Karlsruhe, where his portrait of the grand duke Leopold established his fame. Settling in Paris

Franz Winterhalter, German painter

in 1834, he became the most famous portraitist of his time. His best-known works are impressions of Queen Victoria and the prince consort, of Louis Philippe and members of the Orleans family, of Napoleon III and Eugénie, Francis Joseph, Metternich, Queen Alexandra. He achieved a certain flamboyant elegance, and exhibited at the R.A. during 1852-67. He died at Frankfurt, July 9, 1873.

Winter's Bark (*Drimys winteri*). Small evergreen tree of the family Magnoliaceae. A native of

Winter's Bark. Leaves and fragrant flowers of this aromatic evergreen

S. America, it has oblong leaves, glaucous beneath; and fragrant white flowers, an inch across. The bark has tonic stimulant properties, and is aromatic.

Winter Sports. Term for open-air activities carried out on ice and over deep snow. Developed from localised ways of moving over those impediments, they include skating, tobogganing, sleighing, and ski-ing, all of which have their entries in this work. The idea of turning these means of locomotion into an attraction for visitors is said to have originated with John A. Symonds when at Davos in 1870; and it was in Switzerland

chat, thanks chiefly to the enthusiasm of British sportsmen, winter sports developed into a highly commercialised source of winter income for resorts previously dependent on summer visitors. Switzerland remains the chief site of winter sports; but they have been developed also in other suitable areas, e.g. Austrian Tirol; Buffalo national park, Victoria, Australia; the Canadian Rockies. See Curling; St. Moritz.

Winter's Tale, THE. Drama by Shakespeare. It is an odd mixture of melodrama and pastoral comedy. When the curtain rises Polixenes, king of Bohemia, is entertained by Leontes, king of Sicilia, who suspects him of adultery with Leontes's wife, Hermione. Polixenes takes flight, and Hermione is cast into prison, there to give birth to a daughter, whom Leontes orders to be abandoned in a desert place. The oracle of Apollo then declares that Hermione is innocent and that Leontes will die without an heir unless his daughter is found. His son Mamilius dies. Sixteen years elapse, and we are in Bohemia, "a desert country near the sea," where the lost child Perdita is brought up as a shepherdess. She is wooed by Florizel, son of Polixenes, and taken home, upon which her parents are reunited. The later acts contain beautiful poetry, especially in Perdita's part, while that of Autolycus, "a snapper-up of unconsidered trifles," is bluff comedy.

Written c. 1610 but first printed in the 1623 Folio, the play was founded upon Robert Greene's novel, *Pandosto, or The Triumph of Time*, 1588. It was put on at the Old Vic, 1933 and 1936; Open-Air Theatre, 1937 and 1944.

Wintertthur. Town of Switzerland, in the canton of Zürich. It stands at an elevation of 1,447 ft., overlooking the Eulach, 17 m. by rly. N.E. of Zürich. A rly. junction of seven lines, it manufactures locomotives, as well as machinery and textiles. Its mineral baths are much frequented. At Ober Wintertthur, the Roman Vitodurum, 1 m. N.E., are many relics of antiquarian interest. A possession of the counts of Kyburg, the town passed to the Hapsburgs in 1264, and was sold to Zürich in 1467. Pop. 58,883, seventh in the country.

Winterton, EDWARD TURNOUR, 6TH EARL (b. 1883). British politician. He was born April 4, 1883, and went to Eton and New College, Oxford. At 21 he was elected Unionist M.P. for Horsham, which he continued to represent, so that

by 1945 he was the father of the house of commons. In 1907 he inherited, as 6th earl, an Irish title created in 1766. He was under-

secretary for India, 1922-24 and 1924-29, chancellor of the duchy of Lancaster, 1938, and postmaster-general, Jan.-Nov., 1939.

Perhaps the bluntest member of the house, Lord Winterton published in 1932 a volume of reminiscences, *Pre-War, 1904-1910*.

Winthrop, JOHN (1588-1649). English colonist. Born at Edwardstone, Suffolk, Jan. 12, 1588, and

John Winthrop,
English colonist
After Van Dyck

educated at Trinity College, Cambridge, and the Inner Temple, he threw up a good practice in 1629 and helped to found Boston, Mass. He was 12 times appointed governor of the colony. Holding strict Puritanical views, he opposed the action of Sir Harry Vane, governor at the time, in allowing Anne Hutchinson to propagate her religious opinions. In 1643 he was first president of the commissioners of New England. He died at Boston, March 26, 1649. *Consult* Life and Letters, R. C. Winthrop, 1864-67; Winthrop Papers, Mass. Hist. Soc., 1926.

Winthrop, JOHN (1606-76). English colonial governor. Born at Groton, Suffolk, Feb. 12, 1606, son of the above

John Winthrop,
colonial governor

John Winthrop, he was educated at Trinity College, Dublin, and the Inner Temple. In 1631 he emigrated to America, where he was one of the founders of Ipswich, Saybrook, and New London. He was governor of Connecticut in 1634, 1657-58, and from 1659 until his death, April 5, 1676.

Winton. Name by which Winchester is sometimes known. It is used by the bishop as a signature; also on old milestones.

Winton. Township in N.W. Queensland, Australia. In the centre of a rich grazing district, it is a junction of Central and Northern rlys., 530 m. W. of Rockhampton. Pop. 1,600.

Wire. Thread or slender rod of metal, usually circular in section. The metals chiefly used are highly ductile—gold, silver, copper, etc., and alloys, steel, iron-nickel, etc.

WIRE DRAWING. This process consists of drawing a metal rod through a series of dies of successively smaller areas. The metal is elongated as it is reduced in cross-section. Only a small reduction occurs in a single die. The number of dies used to make a large reduction is limited for each series, in hot working by cooling of the metal, in cold working by strain hardening. The former necessitates reheating, the latter annealing, before further reduction.

For the manufacture of steel wire the billets or ingots of steel are rolled into round rods. The end of the rod is pointed by hammering, filing, or rolling, so that it can pass through the hole in the draw-plate and be gripped ready for drawing completely through. To lessen the wear on the dies, soapy water, oil, tallow, wax, etc., are used as lubricants, or the rod being drawn is previously dipped in a solution of copper sulphate.

In the manufacture of certain fine wires dies of precious stones are used. The finest are made by coating the original metal with silver, drawing as fine as possible, and then removing the silver. See Barbed Wire.

Wireless. The popular name for radio-telegraphy and radio-telephony. The salient points in the early history of radio-telegraphy were Clerk-Maxwell's enunciation in 1867 of the theory of electric-magnetism and his assertion of the existence of electric waves, and the first production of such waves by Hertz in 1887 (Hertzian waves); Branly's invention (1890) of a coherer for detecting such waves; Marconi's practical application of the principle in 1895, by using an elevated wire (antenna) as one plate of a condenser, and the earth as the other, with the air as the intervening non-conductor; the celebrated Patent No. 7,777 (1900) of the Marconi Company, which applied the theory of electrical tuning to the transmitting and receiving circuits; the invention, by Fleming in 1904, of the thermionic valve; of the arc (replacing Mar-

coni's spark), first used by V. Poulsen in Denmark, 1903; of the three-electrode valve, by L. De Forest in 1906; and of the alternator, a generator used for supplying oscillatory currents direct to the antenna, first used by R. Goldschmidt in Germany, 1911. Radio-telephony developed rapidly for naval and military use during the First Great War. For a full technical description of radio-telegraphy and radio-telephony, see *Radio*. See also *Aerial*; *Broadcasting*; *Electro-Magnetic Wave*; *Radar*; *Telegraphy*; *Telephony*; *Thermionic Valve*.

Wire Rope. See *Rope*.

Wireworm. Popular name given to the larvae of certain beetles of the family Elateridae; and sometimes erroneously to other creatures. They are slender, yellow-brown, with very short legs placed far forwards and a pointed hind extremity. Smooth and shining, they are tough skinned. They live up to nearly five years before pupating, feeding below ground at the roots of grasses, cereals, and other crops. When grassland is ploughed in, and the sod broken up and buried, wireworms feed on the roots of the crop that follows, often causing severe damage. With the extensive conversion of grass into arable in the U.K. during the two Great Wars, wireworms presented a problem. In the adult state they are called click beetles or skip-jacks. British examples belong to species of *Agriotes*, especially *A. lineatus* and *A. obscurus*, and of *Athous*.

Wireworm, much enlarged, at the root of a lettuce

Wirksworth. Urban dist. and market town of Derbyshire, England. Situated in a valley at the S. of the Peak, it is 13 m. N.N.W. of Derby on the rly. The 13th century church of S. Mary contains Tudor monuments, a Norman font, and relics of ancient sculpture. Other buildings are the town hall, 1871; moot hall, 1814; hospital; and grammar school, founded 1576. The principal business centres in neighbouring lead mines, worked since Roman times. Wirksworth figures as Snowfield in Adam Bede, Elizabeth Evans (Dinah Morris) having been a native; her pulpit is pre-

served in the Bede memorial Methodist church. Market day, Tues. Pop. 4,680.

Wirral. Peninsula of Cheshire, England. Between the estuaries of the Mersey on the E. and the Dee on the W., it extends nearly to Chester. It is dotted with seaside resorts, and away from the coast is well wooded. One member is elected to parliament, apart from those of the boroughs. Here are industrial Birkenhead, residential Wallasey with several dormitory suburbs of Liverpool, resorts like Bromborough and West Kirby, and Neston inland.

Wisbech. Mun. bor., market town, and river port of the Isle of Ely, Cambs, England. It stands on the Nene, on the Norfolk border, 13 m. S.W. of King's Lynn, and has rly. connexion with Cambridge and Peterborough. Wisbech is a marketing centre for the Fens, grows fruit, flowers, and bulbs, has printing works and timber yards, makes beer and oil-cake, and does a trade by river in agricultural produce, timber, bricks, and pitch. William the Conqueror's castle shows a few remains; the church of SS. Peter and Paul, restored 1873, contains Norman work; in the Brinks is graceful Georgian architecture; Bridge Street is dominated by the Clarkson memorial, the emancipator of slaves having attended Wisbech grammar school. Known since the 7th century, the town received a charter of incorporation in 1549. Market days, Mon. and Sat. Pop. est. 17,200.

Wisby or Visby. City and seaport of Sweden, the capital of the island of Gothland. It is on the W. coast of the island, 44 m. from the mainland and 150 m. S. of Stockholm. One of the most interesting cities of Europe, Wisby retains its extensive walls and their accompanying 38 towers. The cathedral of S. Mary is a fine building of the 13th century, with later additions. The churches include those of the Holy Ghost, S. Clement, S. Catherine, and S. Nicholas, all evidence of the time when Wisby was much larger than it is now. There are interesting ruins, including those of the place of execution. The museum and library are modern. The port has a modern harbour, the Hanseatic one having been destroyed, and an export trade. Wisby is thought to have existed as far back

as the Stone age. It became a member of the Hanseatic League and was wealthy and prosperous in the 11th-14th centuries, being the main Hanseatic entrepôt in the Baltic. The city became Swedish in 1648. Pop. 13,022.

Wisconsin. Chief river of Wisconsin state, U.S.A. It rises in the N. part of the state, on the borders of Michigan, and flows generally S. to Portage, and then W. and S.W. to unite with the Mississippi at Prairie du Chien. It is about 430 m. long and is navigable to Portage.

Wisconsin. North-central state of the U.S.A. Bounded in part on the E. by Lake Michigan, N. by Lake Superior, and W. by the Mississippi, it has an area of 56,154 sq. m., and forms an undulating plateau from 650 ft. to 1,000 ft. in height, presenting little relief apart from rocky masses bored by erosion. The St. Croix on the W. frontier, the Wisconsin, Chippewa, and the Black rivers are affluents of the Mississippi; the Fox, the longest river in the E., flows into Green Bay; Winnebago is the largest of many lakes.

Popularly known as the Badger state, Wisconsin was mainly agricultural until 1900, but by 1936 its manufactured products reached five times the value of crops. This increase in manufacture is due to the proximity of vast iron and coal deposits along the shores of the Great Lakes. Iron ore, zinc, and lead are turned into farm machinery, engines, pumps, refrigerators, metal furniture, precision instruments, and plumbing equipment. The Panama Canal was dug with 77 steam shovels manufactured in Wisconsin. Rivers offer hydro-electric power up to a potential capacity of one million h.p., of which about half is in use. National forests exceed two million acres. An important milling industry is based on the wheat crop, second largest in the U.S.A. In dairy produce Wisconsin ranks first. Co-operative practice applies in the food industries; this activity is now controlled by a law based on principles evolved by flannel workers of Rochdale, Lancs.

Two senators and 11 representatives are sent to congress. The state was admitted to the Union in 1848. Madison is the capital and contains the university, but Milwaukee is much the biggest city, other places being Racine, Kenosha, Green Bay, and La Crosse. Half the foreign-born inhabitants are Germans. Pop. 3,137,587. The standard book is ed. F. L. Holmes, 5 vols., 1946.

Wirksworth arms

Wisconsin Rapids. City of Wisconsin, U.S.A., the co. seat of Wood co. On the Wisconsin river, 90 m. N.N.W. of Madison, it is a rly. junction on the Chicago, Milwaukee, and St. Paul line. The river divides the city into two parts connected by a fine bridge. A rly. centre and the distributing point for a large district, the city has machinery works, foundries, lumber yards, and makes paper, pulp, furniture, and wagons. Its buildings include a city hall, court house, hospital, and public library. A city charter was granted in 1869, when the place was called Grand Rapids. Pop. 11,416.

Wisden's Almanack. Annual handbook devoted exclusively to cricket. It was started in 1864 by John Wisden (1826-84), professional cricketer, writer on the game, and sports outfitter. In normal times each edition gives the full score of every first-class match played in the preceding summer, with a wealth of statistics, averages, records, birthdays and obituaries, and such feature articles as "five cricketers of the year."

Wisdom, Book of. Book of the O.T. Apocrypha, which purports to be the work of Solomon, and in Greek manuscripts is entitled *The Wisdom of Solomon*. It was written by an Alexandrian Jew, probably between A.D. 1 and 40, to counteract the scepticism and Epicureanism represented in the Book of Ecclesiasticus. There is a good commentary (1913) by A. T. S. Goodrick in the Oxford Church Bible Commentary. See Apocrypha.

Wise, Thomas J. (1859-1937). British bibliophile and literary forger. Originally a clerk in a London firm, he prepared facsimiles of first editions for the Shelley Society, and later began forging "rare" 19th century pamphlets and "first editions" of great writers on an extensive scale for the second-hand market, though he also made genuine and valuable discoveries. He succeeded in deceiving all experts, and was the recipient of academic honours, e.g. was made an hon. fellow of Worcester College, Oxford. In 1934 two booksellers, J. Carter and G. Pollard, published an account of their own detailed examination of many of Wise's alleged discoveries, denouncing them as forgeries. No explanation was ever offered by Wise. On his death, his collection, undoubtedly containing much of real value, was purchased by the British Museum. Consult Thomas J. Wise in the *Original Cloth*, W. Partington, 1947.

Wiseman, (Frederick) Luke (1858-1944). English divine. He was born at York, Jan. 29, 1858, son of the Rev. L. H. Wiseman, and educated at Sutherland House, Highgate; London university; and Didsbury theological college, being assistant tutor at the last-named, 1881-87. He then took charge of the Central Hall mission in Birmingham for 25 years. In 1912 he was chairman of the Wesleyan Methodist conference, a position his father had held 40 years earlier. After the Methodist reunion, he was president of the conference, 1933-34, and in 1940 became minister at Wesley's chapel, City Road, London. Always interested in the musical side of worship, he composed much, and wrote a study of Charles Wesley. Wiseman died Jan. 16, 1944.

Wiseman, Nicholas Patrick Stephen (1802-65). British prelate. Born at Seville, of Irish parentage, Aug. 2, 1802, he was educated at Ushaw and in Rome. During 1828-40 he was rector of the English college in Rome, where his learning won him a curator's post in the Vatican library and a professorship in Oriental languages in the university. In 1840 he went to England, where his lectures and writings had already made him known. Ordained bishop, he was made president of Oscott College, and had charge of churches in the midlands. He had previously helped to found *The Dublin Review*.

In 1850, when the pope established a hierarchy in Great Britain, Wiseman was made first archbishop of Westminster and a cardinal. He continued in office until he died, Feb. 15, 1865. Wiseman more than anybody was responsible for the increase of Catholicism in England. He was an indefatigable social reformer, and founded retreats and communities. There are *Lives* by W. Ward, 1897; D. Gwynn, 1929.

Wishart, George (c. 1513-46). Scottish reformer and martyr. A schoolmaster at Montrose, in 1538 he was charged with heresy in teaching the Greek Testament and had to take refuge in England. In 1539 he was convicted on a similar charge arising out of lectures delivered by him at Bristol, and next spent some time in Germany and

George Wishart,
Scottish reformer

Switzerland, afterwards entering Corpus Christi College, Cambridge. An English translation of the Confession of Faith of the Churches of Switzerland made by Wish-

art about this time was published in 1548. He returned to Scotland in 1543, but in 1545 was arrested, tried for heresy at St. Andrews, and burnt, March 1, 1546.

Wishaw. This former Scottish burgh, in Lanarkshire, was in 1920 united with Motherwell (q.v.).

Wisley. Village of Surrey, England, 4 m. E. of Woking. It has a common, but is principally known for the gardens of the Royal Horticultural Society, opened 1904, which include a laboratory and research station.

Wismar. Seaport of E. Germany, in the *Land* of Mecklenburg. It is situated on the bay of Wismar, 20 m. N. of Schwerin and 149 m. N.W. of Berlin, on a fine natural harbour. The chief buildings are S. Mary's, S. George's, and S. Nicholas's churches, three fine survivals of the 13th-15th centuries, and a 16th century edifice once the residence of the dukes of Mecklenburg. Others are the town hall, museum, etc., and there are old houses. Wismar is a fishing port and in normal times has shipbuilding and engineering works. Entered by the British 6th airborne div., May 2, 1945, it lay in the Russian zone of occupation after Germany's surrender. A Hanseatic town, Wismar was Swedish, 1648-1903. Pop. 26,016.

Wissembourg (Ger. Weissenburg). Town of Alsace, France, in the dept. of Bas-Rhin. It stands on the Lauter, 42 m. N.N.E. of Strasbourg. There is a beautiful church, once belonging to a Benedictine abbey founded in the 7th century. The church itself dates from the 13th century. Wissembourg, which became a free city in 1305, has some manufactures, but is chiefly famous for its battles. It was conquered by the French in 1673, and here in Oct., 1793, the Prussians stormed some fortifications defended by the French. On Aug. 4, 1870, the Germans, under the crown prince, gained their first victory in the war against France. In German occupation from 1940, the town was liberated March 19, 1945, by the U.S. 7th army. Pop. 7,000.

Wissmann, Hermann von (1853-1905). German explorer. He was born Sept. 4, 1853, at Frankfort-on-Oder, and served in the army until 1880, when he entered the German African co. He set out from Loanda and made his way across Africa, reaching Zanzibar in 1882. In 1883 he explored the Congo basin, and passed four years in investigating the lands round Lakes Tanganyika and Nyasa. German commissioner from 1889, and governor of German East Africa 1895-96, Wissmann died July 15, 1905.

Wistaria. Genus of plants including *W. chinensis*, the Chinese kidney-bean tree. It is a climbing

Wistaria. Spray of flowers and leaves of this climbing shrub

shrub or tree of the family Leguminosae, and a native of China. The long leaves are broken up into about six pairs of oval leaflets, clothed with silky down. Wistaria may be planted in any well drained soil, against a sheltered wall, in spring, and allowed to grow at will, being pruned only as absolutely necessary in Feb. or March.

Wit (A.-S. *witt*, knowledge; in a personal sense, A.-S. *wita*, a wise man). Term formerly equivalent to intelligence or understanding, still used in the plural for the mental faculties. Through the transitional sense of intellectual brilliance or alertness, as practised by the men of letters of the 18th century, the word has come to mean the power, displayed in conversation and literature, of affording intellectual satisfaction by the unexpected association of apparently unconnected ideas, some point of similarity being realized with a shock of surprise. It differs from humour (*q.v.*) in appealing to the intellect rather than to the feelings, and is rarely quite devoid of some degree of malice.

Brevity and an appreciation of the niceties of language are proper to wit, which is an essential ingredient in the epigram, and in such figures of speech as paradox, antithesis, and antilimax. The quality is conspicuous in Shakespeare, Dryden, Congreve, Pope, Swift, Sheri-

dan, Byron, Lamb, Sydney Smith, Meredith, Wilde, Chesterton, but is more characteristic of French than English literature.

Witan. Short name for the Anglo-Saxon assembly known as the Witenagemot (*q.v.*).

Witch. Term now generally restricted to a sorceress or female magician, the male counterpart being a wizard, a word formed from wise. Witch, formerly applied to both sexes, is A.-S. *wicca*, masc., *wicce*, fem., from the verb *wiccan*, which appears to have meant originally to make to yield, to make "weak," hence to conjure away. Wicked is a derivative. The older name for a witch was hag, A.-S. *haegtesse* (*cf.* Ger. *Hexe*), originally a female demon. The witches in Macbeth are perhaps ultimately derived from the Norns. See Norn.

Witchcraft. Term applied to forms of sorcery or magic alleged to be practised by women in league with demons. Witches were believed to cause death or injury by spells, potions, etc., to raise storms and blast crops and cattle, and to obtain infernal aid in gaining wealth, gratifying lust, and knowing future events, to travel through the air on broomsticks, and transform themselves into animals. Belief in witchcraft was a relic of an early pagan cult which identified gods or devils as inhabiting the souls of particular animals or human beings. The witches' sabbaths were the four great annual assemblies of the devotees of the cult. They took place on Feb. 2, April 30, Aug. 1, and Oct. 31; there were also the smaller weekly assemblies of local witches, known as covens.

The earlier ecclesiastical view that witchcraft was a delusion gradually yielded to a fanatical fear of a vast anti-Christian conspiracy. From 1258 the Inquisition treated witchcraft as heresy. A great persecution began in 1434 and was intensified by a bull of Innocent VIII, 1484. Texts like Ex. 22, v. 18, provided a ground for execution, generally by burning. The belief was largely of scholastic origin, supported by confessions under torture. Lingering paganism accounts for some facts. While most alleged witches may have been normal, others were hysteri-

cal or insane, and, with some, suggestion and psychical phenomena played a part.

Persecution spread to America, *e.g.* Salem, 1692. The British penal laws were repealed 1736, the last execution for witchcraft having taken place at Dornoch, 1722. It has been estimated that in Europe generally 300,000 supposed witches suffered death, 1484-1782. Late in the 19th century such persons were occasionally lynched. See Broken; Demonology; Evil Eye; Hopkins, M.; Magic; Walpurgis Night.

Bibliography. Witch, Warlock, and Magician, W. H. D. Adams, 1889; History of English Witchcraft, W. Notestein, 1910; Witchcraft, C. Williams, 1941; Witchcraft in England, C. Hole, 1945; Four Centuries of Witch Beliefs, R. T. Davies, 1947.

Witches' Brooms. Alternative name for Witch Knots (*q.v.*).

Witch Hazel (*Hamamelis virginica*). Shrub or small tree of the family Hamamelidaceae, native of N. America. It has alternate oval leaves, and flowers late in autumn. The flowers are yellow, with four long strap-shaped petals, and the fruit is a capsule containing a single bony, edible seed which is not mature till the summer. The leaves and bark are astringent.

Witch Hazel. Twig with leaves and flowers

Witch Knots. Clusters of short, crowded shoots on trees, particularly birch and hornbeam. At a distance resembling rooks' nests, they are caused by minute internal fungi, which set up a diseased condition causing the branches to be swollen and inducing an abnormal number of shoots which branch in all directions. The fungus is *Exoascus betulinus* in the birch; a similar condition in the wild cherry is caused by *E. cerasi*. The witch knot of the hornbeam is the work of *E. cornini*. Abnormal growths of silver fir and Scots pine produced by the fungus *Peridermium elatinum* are called witches' besoms. See Gall.

Witenagemot (A.-S. *witena gemot*, assembly of the wise). The official national council of a Saxon or English kingdom. Its powers, functions, and composition depended upon custom, not upon written law. Broadly speaking, the supreme authority in the Saxon kingdom was the king, but he took no action of general importance

without consulting the Witan, or wise men, representing what in earlier days had been the council of chiefs.

But as in early days measures of importance had been submitted to the approval of the free men assembled in arms, so on special occasions the Witan took the character of a general assembly, a meeting of such freemen as found it convenient to attend. Thus when there was a king, the Witan was an informal consultative body without whose approval the king could not venture to take any disputable steps. On emergencies the magnates acted in the character of a national assembly, and deposed a king, while on the death of a king, since there was no law actually fixing the succession, it lay with the magnates, acting as a national assembly, to recognize his successor. The Witan remained, and even for a short time retained its name, after the Norman Conquest. *Pron.* Witten-ag-emote.

Witham. River of Lincs, England. It rises just in Rutland, near Market Overton, and flows in a wide northerly curve past Grant-ham, Lincoln, and Boston to the Wash, into which it falls 5 m. from Boston. It is used by small vessels as far as Lincoln, and is about 70 m. long.

Witham. Urban dist. and town of Essex, England. On an affluent of the Blackwater, 14 m. S. W. of Colchester, on the high road to London, it is a rly. junction. The church of S. Nicholas, mostly dating from c. 1325, contains effigies and monuments. The local industry is mainly agricultural, but there is some milling, while steel windows and gloves are made. Pop. 6,000. *Pron.* Wit-ham.

Wither or **WITHERS**, GEORGE (1588-1667). English poet and pamphleteer. Born at Bentworth, Hants, June 11, 1588, and educated at Magdalen College, Oxford, he was admitted to Lincoln's Inn in 1614. Several times imprisoned, in con-

sequence of his writings, in the Marshalsea and Newgate, Wither was at once a satirist, a lyric writer, a Puritan, a hymn writer, and a soldier, fighting for and against Charles I. He displayed notable courage during the plague, and died in the Savoy, May 2, 1667. His works include the satires *Abuses Stript and Whipt*, 1611; *Hymnes and Songs of the Church*, 1623; *The Schollers Purgatory*, 1624; *Halleluiahs*, 1641. One of his best lyrics is *Shall I, Wasting in Despair? Consult Works*, 20 vols., 1871-82; *Poems*, ed. F. Sidgwick, 2 vols., 1902.

Witherite. Ore mineral of barium, barium carbonate, second in importance to barytes (*q.v.*). Witherite is white in colour and possesses a resinous lustre. It occurs as a gangue mineral associated with galena and barytes in many lead veins. Witherite is useful as a source of barium salts, and a little is used in pottery.

Withington. Residential dist. of Manchester, England. It lies about 4 m. S. of the city proper, and is served by rly. An M.P. is

Witney, Oxfordshire. The market place with the Butter Cross. In the distance is the parish church, and a corner of the Town Hall is on the left

elected. Pop. 44,600. There are villages of this name in Cheshire, Glos, Herefordshire, and Salop.

Without Prejudice. Term used by lawyers to signify that what is being done is not to prejudice the legal rights of the parties. It is chiefly used in negotiations for the settlement of claims. Thus, where a defendant offers without prejudice to pay £50 in settlement of a claim for £100, and the offer is not accepted, the plaintiff cannot use the offer as an admission by the defendant that something is owing.

Withy or **WITHE** (A.-S. *withig*, twig). Technical term used to describe tough, flexible twigs of wood, used for binding things together. The term occasionally means any flexible or elastic handle fitted to a tool to minimise shock to the worker's hand.

Witley Court. Mansion and park in Worcestershire, England, about 5 m. S.W. of Stourport. Residence during 1843-46 of the dowager Queen Adelaide, the property passed to the earl of Dudley, who spent £250,000 in enlarging and improving it. The mansion, in the Italian style, built in the 18th century by Lord Foley, stands in a park of 500 acres, notable for its fine oaks and stocked with deer. It is connected by corridor with the church, 1735, restored 1862, which has a painted ceiling by Verrio.

Witness (A.-S. *witnes*, testimony). In legal proceedings, one who gives evidence. A witness must appear in accordance with the terms of the subpoena. He need answer no question tending to incriminate himself, but must not leave the court after giving evidence until the case is ended, being liable to recall at any point. *See* Evidence; Oath; Subpoena; Trial.

Witney. Urban dist. and market town of Oxfordshire, England. On the Windrush, 10 m. W. by N. of Oxford, it is served by rly. The parish church of S. Mary, restored in 1867, contains remains of a Norman building. Other features are the ancient town hall, corn exchange, free grammar school, and Bluecoat school dating from 1723. The butter cross in the market place was put up in 1683. Witney is famous for its blankets. Pop. 6,381.

Witney arms

Witt, JAN DE (1625-72). Dutch statesman. Born at Dort, Sept. 24, 1625, he was educated at Leyden, and became a lawyer at The Hague, being appointed to a civic post at Dort, 1650. Three years later he was chosen grand pensionary of Holland, becoming practically ruler of that country in domestic and foreign affairs. He was the greatest of those who held the office. In 1654 he concluded an honourable peace with England, by one of the secret terms of which William of Orange was excluded from the Dutch stadtholdership. On the restoration of Charles II this clause was one of the causes of the Anglo-Dutch war of 1665. De Witt was responsible for prosecuting the war, and

Jan de Witt, Dutch statesman
After Netscher

George Wither,
English poet

showed brilliant diplomacy in effecting the peace of Breda, which concluded it. He also arranged the Triple Alliance between Holland, England, and Sweden, 1668. But the war with France in 1672, with the machinations of the followers of William of Orange, destroyed his popularity and broke his power. He resigned on Aug. 4, and on the 20th at The Hague was with his brother Cornelius (1623-72) brutally done to death by an infuriated mob.

Witt, Sir Robert Clermont (b. 1872). British art collector. Born Jan. 16, 1872, he was educated at Clifton and New College, Oxford. He became a prominent solicitor before devoting himself to studying art. A founder and president of the national art collections fund, he was trustee of the National Gallery with short intervals, 1916-40, and of the Tate Gallery, 1916-31. He started a comprehensive library of photographs of paintings and drawings. Knighted in 1922, Sir Robert published *How to Look at Pictures*; 100 Masterpieces of Painting; *The Nation and Its Art Treasures*.

Wittelsbach. Name of the German family ruling in Bavaria until 1918. From Luitpold, duke of Bavaria (d. 907), descended the counts of Scheyern, who about 1124 became counts of Wittelsbach, a castle N.E. of Augsburg. In 1180 Otto I became the first hereditary duke of Bavaria. Otto II was made count palatine of the Rhine, 1214, and from 1294 there were separate Palatine and Bavarian lines. The former, whose head became an elector, 1356, supplied an emperor in Louis IV, 1314, and a German king in Robert III, 1400. From him descended the Zweibrücken branch, which gave three kings to Sweden—Charles X, XI, and XII, 1654-1718. The Bavarian Wittelsbachs, electors from 1623, became extinct, 1777, and were succeeded by the elector palatine, and in 1799 by the duke of Zweibrücken, who became the first king of Bavaria in 1806 as Maximilian I. See *Bavaria*; *Palatinate*.

Witten. German town in N. Rhine-Westphalia. A rly. junction, 31 m. N.N.E. of Cologne, it was formerly an agricultural centre around two castles, Haus Witten and Steinhäusen, both built c. 1500. It has an old church of S. John, reconstructed 1762; a museum; and an open-air theatre. Its industries comprise iron, glass, and ceramic works, as well as coal mining. In the Ruhr (q.v.) basin, it suffered widespread dam-

age during the Second Great War, though the pop. remained approx. 73,000. It lay in the British zone of occupation after the war.

Wittenberg. E. German town and county seat of Saxony-Anhalt. It is on the right bank of the Elbe, 58 m. S.S.W. of Berlin. Though an industrial centre, with engineering, paper, chocolate, food preserving, and soap works, its fame comes from its association with Luther. Here on Nov. 1, 1517, the 95 theses were nailed to the castle church. Luther lived in the Augustine monastery; he preached in the town church (14th cent.), where he and Melancthon were buried. The houses of the two reformers and of Lucas Cranach are preserved; so are a palace (1490-99) of the Saxon electors and a town hall of that period. Originally a Flemish settlement, Wittenberg received urban rights in 1293; had during 1502-1817 the university now at Halle; suffered during the Hussite and the Thirty Years War, and in those of Frederick II; was turned into a fortress by Napoleon, stormed by the Prussians in 1814, and fell to them next year. Captured by the Russians April 25, 1945, it lay in the Russian zone of occupation after the surrender of Germany. Pop. 37,000.

Witton Gilbert. Village and parish of Durham, England. It is 3 m. N.W. of Durham, on the rly. The church of S. Michael, rebuilt in 1867, is an ancient foundation; the 13th century lepers' hospital,

Woad. Left, clusters of flowers and fruit. Right, part of stem

founded by John Pudsey, bishop of Durham, was rebuilt as Witton Hall.

Wittstock. Town of E. Germany, in the Land of Brandenburg. It stands on the Dosse, 60 m. N.W. of Berlin, and has some manufactures, chiefly of textiles and wood. Medieval walls, towers, churches, and a town hall of 1530 still stand. Here on Oct. 4, 1636, the Swedes

destroyed the army of the elector of Saxony, gaining one of the great victories of the Thirty Years War. Pop. 8,373.

Witu. Town in Kenya Colony. It is situated near the coast, a few miles N. of the Tana river. In 1885 it was occupied by the Germans, who in 1889 declared a protectorate over the sultanate of which it was the capital. Next year, however, they handed it over to Great Britain. See *Kenya*.

Witwatersrand. Full name of the gold-bearing dist. in the Transvaal, S. Africa, known in brief as the Rand. In geology, the Witwatersrand system is the name given to the gold-bearing strata in the S. part of the Transvaal. The metal is found in reefs of quartz pebbles compacted with iron oxides, pyrites, and silica. The university of Witwatersrand, founded at Johannesburg in 1922, takes over 3,000 students. See *Gold*; *Johannesburg*; *Rand*; *Transvaal*.

Wladyslaw. Polish form of a Slav name usually rendered in English as *Ladislav* (q.v.).

Wloclawek. Town of Poland, in the govt. of Warsaw. On the left bank of the Vistula and the Warsaw-Bydgoszcz rly., it is 117 m. N.W. of the capital. There are ironworks and factories of earthenware goods. The Gothic cathedral dated from 1365. Wloclawek was liberated by Zhukov's 1st White Russian army Jan. 20, 1945, during the Second Great War. Pop. (pre-1939) 56,000.

Woad (*Isatis tinctoria*). Biennial herb of the family Cruciferae, native of Europe and N. Asia. The root-leaves are oblong or oval; those of the stem arrow-shaped without stalks. Small yellow flowers are crowded in an elongated cluster. The seeds are contained in oblong pods, which are winged, and turn brown when ripe. Identified as the *vitrum* with which Julius Caesar declared that the Britons of both sexes stained the skin, woad was an important crop in Europe, but from the middle of the 16th century it was increasingly supplanted as a source of blue dye by indigo (q.v.). It was still cultivated on a small scale in Lincolnshire for the use of woollen manufacturers until the last expert died in 1945. The dye-stuff is prepared by grinding the leaves into a paste, which is fermented and then kneaded into balls or bricks, and dried in the sun.

Woburn. A market town of Beds, England. It stands on the borders of Bucks, 15 m. S.S.W. of Bedford, its rly. station being Woburn Sands, 2 m. away. The

Woburn Abbey, the 18th century mansion of the dukes of Bedford, built on the site of a Cistercian abbey

old church of S. Mary was pulled down in 1868. The town was at one time a centre of the straw plaiting industry. Market day, Fri. Pop. 1,100.

Near the town is Woburn Abbey, the seat of the duke of Bedford. Surrounded by a fine park, 12 m. in circumference, it stands on land which belonged to a Cistercian abbey founded in 1145 and given to the Russells in 1547. The present house, an 18th century building, contains one of the finest collections of works of art in England. See Bedford, Duke of.

Woburn. City of Massachusetts, U.S.A., in Middlesex co. It is 11 m. N.N.W. of Boston on the Boston and Maine rly. Woburn was incorporated in 1642, and became a city in 1888. Footwear and leathers goods are made. Pop. 19,751.

Wodehouse, PELHAM GREENVILLE (b. 1881). British humorous writer. He was born Oct. 15, 1881, and educated at Dulwich. Beginning with school tales, going on to short stories about recurring groups of characters, and turning out farces and the libretti of

P. G. Wodehouse, British writer

musical comedies, he built up a reputation as, for many readers, the funniest writer of his day. On their own plane, his plots were models of construction, and his style was unique, especially in first-person narration by characters of surpassing inanity and charm. Bertie Wooster of Mayfair and his valet Jeeves (*q.v.*), Psmith, Mr. Mulliner, became popular on both sides of the Atlantic. The action of some of Wodehouse's later works took place in the U.S.A. Wodehouse's titles include *The Pothunters*, 1902; *Love Among the Chickens*, 1906; *Psmith in the City*, 1910;

Dynamite, 1948. The author was living at Le Touquet in 1940 when France was occupied by the Germans; and his subsequent broadcasts over the German radio during the war evoked adverse criticism in both the U.K. and the U.S.A.

Woden. A-S. form of Odin (*q.v.*). *Wódnes daeg* is the origin of Wednesday.

Wodrow, ROBERT (1679-1734). Scottish historian. A Glasgow youth, he graduated at the university, where his father was professor of divinity. In 1703 he was ordained and presented to the parish of Eastwood, where he spent the rest of his life, dying March 21, 1734. A popular preacher, and specially interesting himself in church history and politics, Wodrow's principal work is *The History of the Sufferings of the Church of Scotland, 1721-22*. He left at his death other works in manuscript and volumes of correspondence, some of which were afterwards published by the Wodrow Society. One of his 16 children was the Auld Wodrow of Burns's 'Twa' Herds.

Woffington, MARGARET OR PEG (1718-60). British actress. Born in Dublin, Oct. 18, 1718, the daughter of a bricklayer, she acted there quite young, and made her first London appearance at Covent Garden, Nov. 6, 1740, as Silvia in *The Recruiting Officer*. A fortnight later she appeared in her famous breeches part of *Sir Harry Wildair in The Constant Couple*. During 1742-48 she played with Garrick at Drury Lane, and afterwards in Dublin and at Covent Garden, acting acceptably in tragedy, but achieving her main success as the fine lady of comedy — Milamant, Lady Townley, Lady Betty Modish, Lady Plyant,

Piccadilly Jim, 1918; *A Damsel in Distress*, 1919; *The Clicking of Cuthbert*, 1922; *The Cabaret Girl* (musical comedy), 1922; *Summer Lightning*, 1929 (later filmed); *Jeeves Omnibus*, 1931; *The Luck of the Bodkins*, 1935; *Anything Goes* (play), 1935; *Mulliner Omnibus*, 1935; *Uncle*

and Rosalind. She had numerous lovers besides Garrick, and carried on a notable feud with Mrs. Clive. She retired from the stage in 1757, and died March 28, 1760. Reade gave the name Peg Woffington to one of his novels. *Consult Life*, J. F. Molloy, 1884.

Wöhler, FRIEDRICH (1800-82). German chemist. Born at Eschersheim, near Frankfurt - on - Main, July 31, 1800, he was educated at Marburg, Heidelberg, and Stockholm. In 1825 he was appointed chemistry teacher in the polytechnic school in Berlin, and while there isolated aluminium, 1827, by a method developed by Deville on a commercial scale. In 1828 he isolated beryllium, discovered yttrium, and prepared urea synthetically, this being the first instance in which an organic compound had been made artificially. Afterwards, with Liebig, he published papers on mellitic, cyanic, and uric acids. He was professor of chemistry at Göttingen from 1836 until his death, Sept. 23, 1882.

Wohlgenuth, MICHAEL (1434-1519). German painter. Born at Nuremberg, he studied under Hans Pleydenwurff, and became one of the most important artists of the Nuremberg school. He also fostered the arts of wood carving and wood engraving. He was the master of Albrecht Dürer. There were paintings by him in Nuremberg churches, and at Munich in the Pinakothek.

Wohlwill Process. Electrolytic process for purifying gold bullion. The impure bullion containing silver, the platinum metals, etc., is cast into anodes, which are electrolysed in a solution of gold chloride and hydrochloric acid. The tanks used are of porcelain, and the cathode starting sheet is a thin strip of fine gold. The solution is stirred and, on passage of the current, pure gold is deposited on the cathode, while the impurities form an insoluble slime at the bottom of the tank. When the gold cathodes weigh about 80 oz. they are removed, washed, melted in plumbago crucibles, and cast into ingots with a fineness of 999.3 to 999.5 parts per 1,000. The slimes are collected and the silver and other precious metals recovered by chemical processes. This process gives a purer gold than the sulphuric acid parting process; it also allows complete recovery of the platinum metals; but losses are a little higher.

Wozikovsky, LEON (b. 1897). Polish dancer. A pupil of Cecchetti, he studied at the Warsaw ballet school, and in 1915 joined the

Peg Woffington, British actress

Wolf. 1. American timber wolf. 2. Indian species, *Canis pallipes*. 3. European or Siberian wolf
W. S. Berridge, F.Z.S.

Diaghilev co., remaining with it until the founder's death in 1929. He joined the de Basil co. which visited London in 1933, and danced with outstanding success in *Jeux d'Enfants*, *Cotillon*, *The Three-Cornered Hat*, *La Boutique Fantasque*, *Les Présages*, and *Prince Igor*. *Pron.* Vo-ji-kofski.

Woking. Urban dist., giving its name to a co. constituency, of Surrey, England. On the Wey, 6 m. N. of Guildford, it comprises an old village and a newer quarter near the main line rly. station. It is a Green Line bus terminus. The old parish church of S. Peter contains portions of the original Norman building. The London Necropolis is at Brookwood, and in the neighbourhood also are the ruins of Newark priory. Pop. 40,000. *See* Brooklands.

Wokingham. Mun. bor. and market tn., giving its name to a co. constituency, of Berkshire, England. It is 7 m. S.E. of Reading, and is served by rly. The Early English church of All Saints, restored in 1880, contains an ancient font. Market day, Tues. Pop. est. 8,500.

Wolcot, JOHN (1738–1819). British satirist who wrote under the name Peter Pindar (*q.v.*).

Wold (*A.-S. weald*, wood). Term used in England for open, hilly country. The Yorkshire Wolds form a chalk ridge in the E. Riding, extending from Ferriby on the Humber in a curve of 35 m. to Flamborough Head. The highest point reaches 800 ft. The Lincolnshire Wolds form a chalk ridge extending for 45 m. S.S.E. from Barton-upon-Humber to Spilsby. Of an average elevation of about 350 ft., the ridge rises near Claxby to 550 ft. There are also wolds on the borders of Notts and Leics, while the same word appears in Cotswold—*cf.* Stow-on-the-Wold.

Wolf (*Canis lupus*). Member of the dog family. There is probably only one species of true wolf, though many slightly differing varieties or races are known. The European wolf may be regarded as the type.

Wolves occur only in the N. hemisphere, with the exception of a race found in the Falkland Islands. In Europe the wolf ranges over the entire continent, except in a few districts where it has been exterminated. Formerly abundant in Great Britain, it was exterminated in England during the reign of Henry VII, in Scotland about 1743, and in Ireland about 1766. In colour the European wolf is brownish grey with lighter underparts, but white and black specimens are occasionally found. It lives mainly in the forests, and is usually found solitary or in pairs; but in the winter packs combine for hunting. It rarely attacks man, but it often raids the flocks.

The American wolf is greyer in colour and tends to become white in the N. districts. In Alaska occurs a very large creature which measures nearly six ft. in length, including the tail, and stands 31 ins. high at the shoulder. The so-called timber wolf has a shorter tail, but is only a local race of the grey wolf. In Spain the wolves have white patches on the cheeks and throat. *See* Animal; Coyote; Dog.

Wolf, FRIEDRICH AUGUST (1759–1824). German scholar. Born Feb. 15, 1759, at Hainrode, near Nordhausen,

Friedrich Wolf,
German scholar

he became a professor at Halle, but in 1807 was obliged by the French occupation to move to Berlin. He died at Marseilles, Aug. 8, 1824. In his *Prolegomena ad Homerum*, 1796, he started the theory that the *Iliad* and the *Odyssey* are ancient ballads by many writers brought together and unified long afterwards. Wolf is acclaimed as founder of the science of philology.

Wolf, Hugo (1860–1903). Austrian composer. Born at Windischgraz, March 13, 1860, he studied at Vienna conservatoire, and in 1886 became music critic to the *Vienna Salonblatt*, a post he resigned after the publication of his first group of songs. For the rest of his life he existed—nervous, fractious, and frequently in dire poverty—mainly on the generosity of those who admired his music. He became insane in 1897, and died in an asylum, Feb. 22, 1903.

One of the supreme song writers, Wolf achieved a miraculous fusion of melody and declamation. The best-known songs were composed chiefly between 1887 and 1891, and grouped as *Mörike Lieder*, *Eichendorff Lieder*, *Goethe Lieder*, songs from the *Spanisches Liederbuch* of Heyse and Geibel, and from the former author's *Italianisches Liederbuch*. Some of these last date from the 1890s, as do settings to three Michelangelo sonnets. Instrumental works by Wolf include the early symphonic poem *Penthesilea*; Italian serenade for strings; choral works, *Christnacht*, and *Dem Vaterland*. An opera, *Der Corregidor*, first performed at Mannheim in 1896, was lyrical rather than dramatic. The best-known *Life* is by E. Newman, 1907.

Wolf, LUCIEN (1857–1930). A British journalist. Born in London Jan. 20, 1857, of Jewish family, he was educated in Brussels and Paris, worked on the staff of *The Jewish World*, 1874–93, and was its editor, 1906–08. Foreign editor of *The Daily Graphic*, 1890–1909, he also contributed to periodicals on matters of Jewish interest. He was several times president of the Jewish Historical Society of England. Representing the Anglo-Jews at the Paris conference of 1919, he effected various minority treaties. He published historical works on the Jews in England, Russia, etc.; *Life of Sir Moses Montefiore*, 1884. His *Essays in Jewish History*, ed. C. Roth, were reissued in 1934, Wolf having died Aug. 23, 1930.

Wolf, Max Franz Joseph Cornelius (1863-1932). German astronomer. Born at Heidelberg and educated at Heidelberg and Strasbourg universities, he was appointed director of Königstuhl observatory in 1893, and in 1902 professor of astronomy at Heidelberg.

Max Wolf,
German astronomer

When he died, Sept. 6, 1932, he was president of the German astronomical association. Wolf is known for the periodical comet discovered in 1884 and named after him, and for his discovery by photographic means of more than 200 asteroids.

Wolfe, Humbert (1885-1940). British poet and critic. Umberto Wolfe was born in Milan of Jewish parents, Jan. 5, 1885, and went from Bradford grammar school to Wadham College, Oxford. He entered the board of trade, 1908, helping to form a labour dept.—

Humbert Wolfe,
British poet

later the ministry of Labour, of which he became deputy secretary in 1938. He died Jan. 5, 1940. As a poet his diction became elaborate when he treated problems of philosophy in a religious rather than in a philosophical way; but he had a mordant wit which found scope in satire and epigrams. He founded his reputation with London Sonnets, 1920, and Kensington Gardens, 1924; Kensington Gardens in Wartime appeared in 1939, following many volumes of verse. Wolfe's most ambitious work was probably The Uncelestial City, 1928, with its rarefied beauty. Lampoons came out in 1925; Dialogues and Monologues (prose criticism) in 1928. The Silent Knight (in rhymed verse) was performed at the St. James's Theatre in 1937. The Upward Anguish described school and Oxford, and Portraits by Inference, 1934, was reminiscent.

Wolfe, James (1727-59). British soldier. Born at Westerham, Jan. 2, 1727, he was educated at Greenwich and in 1741 was commissioned in his father's corps of marines. Transferring to the 12th foot regiment, he fought in Flanders and Prussia, 1742-45, being

present at Dettingen. In 1745-46, now brigade-major, he served against Prince Charles Edward, taking part in the battles of Falkirk and Culloden. In the Netherlands, 1746-47, he was wounded at Lawfeldt. After several years of garrison duty in England and Scotland, Wolfe accompanied the expedition to Rochefort in 1757 as quartermaster-general, and next year was appointed to command a brigade in America, where he distinguished himself at the siege of Louisburg.

Promoted maj.-gen. in Jan., 1759, he was given command of the force sent up the St. Lawrence against Quebec. He directed the operations from June 27, when he reached the Isle of Orleans, until the battle on the Plains of Abraham, in which he was killed after scaling the cliffs with the utmost gallantry, Sept. 13, 1759. His body was brought to England and buried in the church of St. Alfege, Greenwich. See Abraham, Plains of; Quebec, Capture of; Westerham. Consult Life and Letters, B. Willson, 1909; Lives, A. G. Bradley, 1895; E. Salmon, 1909; J. W., Man and Soldier, W. T. Waugh, 1932.

James Wolfe

Wolfe-Barry, Sir John Wolfe (1836-1918). British engineer. Son of Sir Charles Barry, the architect, he was born Dec. 7, 1836, educated at Trinity College, Glenalmond, and trained as an engineer under Hawkshaw. He devoted himself mainly to rly. and dock work, and became engineer for the Barry rly., Tower Bridge, and important docks. He was a member of various royal commissions, and his influence led to the establishment of a standards committee in connexion with British engineering. In 1897 he was knighted, and next year took the additional name of Wolfe. He died Jan. 22, 1918.

Wolfenbüttel. Town of W. Germany, in the Land of Lower Saxony. It stands on the Oker, 7 m. S. of Brunswick. Capital of the duchy until 1753, it has a remarkable palace of the late 17th century, and many old framework buildings, e.g. the town hall (1600), a Gothic church of S. Mary of the same period, and Trinity church. Here is one of the world's most valuable libraries, with over 8,000

manuscripts; Leibniz and Lessing were among its librarians. Lessing lived in the town from 1770 to his death in 1781 and wrote Nathan the Wise in what is now a museum. The Herman Goering steelworks here were the scene of a stiff fight, April 11, 1945, before the town fell to the U.S. 2nd armoured div. The town, itself unharmed, lay after Germany's surrender in the British zone of occupation. Pop. 34,000.

Wolff. Name of a German news agency which existed from 1849 to 1933. It was similar to and allied with Reuters in Great Britain and Havas in France. Founded by a journalist, Bernhard Wolff, it was transformed in 1874 under Bismarck's auspices into the Continental Telegraph co., whose shares were held by two private banks until acquired by the Reich in 1932. A world-wide organization, it had special facilities for acquiring and spreading news; technically independent, not subsidised by the govt., it had its own wireless transmitter in exchange for putting out govt.-inspired news and official proclamations. The Wolff agency on Jan. 1, 1934, was forcibly merged with Hugenberg's Telegraphen-Union and renamed Deutsches Nachrichten-Büro by the Nazi govt. Pron. Volf.

Wolff, Sir Henry Drummond (1830-1908). British diplomatist. Only son of Joseph Wolff (v.i.), he was born in Malta, Oct. 12, 1830, and educated at Rugby. He entered the foreign office at 16, and was employed in Florence, the Ionian Islands, Bulgaria, Turkey, Egypt, Persia, and Rumania. Conservative M.P. for Christchurch, 1874-80, and for Portsmouth, 1880-85, he was a member of the fourth party and originator of the Primrose League. G.C.M.G. in 1878, P.C. 1885, and G.C.B. 1889, he was British ambassador at Madrid, 1892-1900, and died Oct. 11, 1908. Among his published works were The Island Empire, 1855, a life of Napoleon at Elba; Memnon Letters on the Suez Canal; Some Notes of the Past, 1892. See Churchill, Lord Randolph; Fourth Party.

Sir Henry Wolff,
British diplomatist

Wolff, Joseph (1795-1862). A missionary to the Jews. Son of an Anglo-German rabbi, he was born at Weilersbach, near Bamberg, Bavaria, and became a convert to Christianity in 1812. He visited

London and entered the Church of England. He studied Oriental languages at Cambridge, and in 1821-28 served as a missionary to the Jews in the Near East. Rector of Linthwaite, Yorks, 1838, he made a journey to Bokhara, 1843, described in his *Mission to Bokhara, 1845, and Travels and Adventures, 1860*. He was vicar of Ile Brewers, Somerset, from 1845 until his death, May 2, 1862.

Joseph Wolff,
missionary to
the Jews
After Mrs. Saxe

Wolff, KASPAR FRIEDRICH (1733-94). German physiologist. Born in Berlin, he took his degree in medicine at Halle in 1759, later attracting attention with his famous treatise, *Theoria Generationis*. A surgeon during the Seven Years War, he was professor of anatomy and physiology at St. Petersburg from 1766 until his death, Feb. 22, 1794. Wolff, who is regarded as the founder of modern embryology, was the first to establish, by watching the growth of the alimentary canal in the chick, the theory of epigenesis. He also in some measure forecast the modern idea of embryonic layers. His other works include *De Formatione Intestini*, 1768.

Wolf-Ferrari, ERMANNO (1876-1948). Italian composer. Born at Venice of German and Italian parents, Jan. 12, 1876, he studied composition under Rheinberger at Munich, and made an international reputation at the end of the century. He was appointed director of the Benedetto Marcello school at Venice in 1902, but resigned in 1912 to devote himself to composition. His best-known opera, *Jewels of the Madonna*, 1911, has a lurid libretto which ill-accords with its delicate and imaginative music. I Quattro Rusteghi has been performed at Sadler's Wells. Wolf-Ferrari, who also produced chamber music and organ pieces, died in Venice, Jan. 21, 1948.

Wolffian Duct. Duct draining the mesonephros, named after K. F. Wolff, (*q.v.*). In the development of a vertebrate each segment contains, in the body region, a coelomic sac, and each of three of these, rather anteriorly placed, grows a cord of cells which becomes hollow to form a tube and bends backwards through the tissue above the coelom. These are the pronephric tubules. They unite

and run back, one on each side of the body, to join the hind gut. They are the most primitive kidney, apart from the totally different nephridia of other forms. The coelomic sacs mentioned develop each a similar tube, which makes contact with the pre-existing tube from the pronephros. In most forms the original three then regress. The remaining duct, composed of the original one and all the secondary contributions opening into it from more posterior segments, is the Wolffian duct. It remains in all forms including man, as the vas deferens (*q.v.*).

Wolf Fish (*Anarrhichas lupus*). Group of large marine fishes, allied to the blennies. They occur in the N. seas and attain a length of over 5 ft. They are used as food fish in Norway, Greenland, and Iceland.

Wolffhound. Name often applied to the borzoi (*q.v.*) and other deerhounds used in wolf-hunting; but belonging particularly to the Irish Wolffhound (*q.v.*). See Dog.

Wolfit, DONALD (b. 1902). British actor-manager. Really named Woolfitt, he was born April 20, 1902, at Newark, Notts, and educated there and at Eastbourne. A first professional engagement was offered in 1920 at York, where he played Biondello in *The Taming of The Shrew*. Seasons with Fred Terry, Matheson Lang, Sheffield repertory, and the Old Vic (1929-30) led to a Canadian tour with Sir Barry Jackson, and in 1933 he acted Hamlet at the Arts Theatre. After two seasons at the Stratford memorial theatre, Wolfit in 1937 formed his own Shakespearian company, which was to present London seasons, tour the provs., put on lunch-time excerpts during the battle of Britain, and play to troops overseas. In 1949 he took the Bedford Theatre, Camden Town, for a season. He was made C.B.E., 1950.

With dignity and panache, and a fine, flexible voice, Wolfit had claims to be called the greatest Shakespearian actor of his day. Apart from the magnificent and moving figure of his Lear, he excelled in the less pleasant characters: Richard III, Iago, and Iachimo were perhaps more convincing than Macbeth, Benedick, and Touchstone; though Shylock and Malvolio were drawn with sympathy. The title-roles in Volpone and The Master Builder also suited him. In 1948 he married his leading lady, Rosalind Iden (b. July 29, 1911). See Acting illus.

Wolfram. Official name since 1949 of the chemical element formerly called tungsten (*q.v.*).

Wolframite. An ore mineral of tungsten (*q.v.*), iron manganese tungstate, (Fe.Mn)WO₄. It varies from iron tungstate, ferberite, to manganese tungstate, hubnerite; iron replaces manganese in all proportions. The mineral occurs as reddish-brown translucent to dark brown opaque tabular crystals, also massive and bladed. The mineral has a brilliant lustre on cleavage surfaces, dull on others. Wolframite occurs in high temperature quartz veins, surrounding some granites, associated with tinstone and copper ores, as in Cornwall, Malaya, Burma, Bolivia; and in certain gold-bearing quartz veins. As it weathers easily it is rarely found in placer deposits, but may occur in eluvial deposits close to the primary source.

Wolfram von Eschenbach (c. 1165-c. 1216). German minstrel. He lived for some time at the court of the landgrave of Thuringia. His epic, *Parzival* (c. 1200-10), finest of the Grail romances, is supposed to be based on a French original, and from it Wagner obtained the libretto for his opera of the same name. Apart from this epic Wolfram is represented by a few lyrics, fragments of a long poem, *Titarel*, and the unfinished *Willehalm*. *Parzival* was put into Eng. verse by J. L. Weston, 1894.

Wolf Rock. Lone rock situated about 10 m. S.W. of Land's End, Cornwall, nearly halfway to the Scilly Islands. It is marked by a lighthouse. The rock is unique in Great Britain in being composed of phonolite. The emplacement of this mass was probably associated with the volcanic period during the Tertiary. During storms in 1948 supplies were dropped to the lighthouse keepers by aeroplane.

Wolf Spider. Name given to spiders of the cosmopolitan family Lycosidae, with 27 British species. They pursue their prey by running and do not spin webs. Many form no retreat, while others live in silk-lined burrows in the ground from which they leap out and seize passing prey. The eggs are carried in a cocoon under the abdomen until they hatch, when the young congregate on the back of the female, ultimately leaving to search for food. The tarantulas are among the wolf spiders.

Wollaston, WILLIAM HYDE (1766-1828). British physicist. Born at East Dereham, Norfolk, Aug. 6, 1766, he was educated at Charterhouse and Caius College, Cambridge, graduating as a doctor. He discovered a way of rendering platinum malleable, which was not

known till after his death. Wollaston also discovered palladium, rhodium, columbium, and titanium, and in 1802 the dark lines in the solar spectrum. He invented the reflecting goniometer and the camera lucida. He published papers on electricity, astronomy, etc., and was secretary of the Royal Society, 1804-16. He died Dec. 22, 1828. Interest on money he bequeathed is awarded annually, with the Wollaston medal, by the Geological Society for work on mineral research.

William Wollaston,
British physicist
After J. Jackson

Wollastonite OR **TABULAR SPAR**. In mineralogy, calcium metasilicate, CaSiO_3 . A rock-forming mineral occurring as tabular or fibrous crystal aggregates, it is generally white to greyish. Wollastonite is a common product of contact metamorphism in impure limestones, associated with diopside, garnet, etc.; it is found also in certain contaminated igneous rocks and in some nepheline-bearing basic ones.

Wollaston Peninsula. The S.W. portion of Victoria (q.v.) Island, N.W. Territories of Canada. To the N.W. rises Colville mt.

Wollaton Hall. Former seat of Lord Middleton in Notts, England. Regarded as one of the finest of Elizabethan houses, it was built for Sir Francis Willoughby, 1580-88. It is interesting as being probably the first house built in England with the elaborate stonework decorations borrowed from Italy. It is now the property of the city of Nottingham, from which Wollaton lies 3 m. W.

Wollin (Pol. Wolin). Island and town of Pomerania. The island, at the mouth of the Oder, covers 96 sq. m. and forms the E. barrier of the Stettiner Haff. The town is on the S. of the island. It is said to have replaced the legendary Vineta, and was a bishopric from 1140, Swedish from 1648, Prussian from 1720. A bridge connects it with the mainland. Pop. 4,982. Misdroy (Pol. Miedzyzdroje) is a seaside resort on the Baltic. Most of the island pop. of 17,000 are engaged in fishing. Wollin was in the part of Germany placed under Polish administration by the Potsdam agreement in 1945.

Wollongong. A seaport and watering-place of New South

Wales, Australia. It is 49 m. by rly. S.S.W. of Sydney. Wollongong has been overshadowed by its suburb, Port Kembla (q.v.), of recent growth, and the area is rapidly being developed as an industrial centre, exporting coal, and based upon iron and steel and electrical industries. Pop. of Greater Wollongong, 62,973.

Wolmer Forest. Heath in the counties of Hampshire and Sussex, England. Approximately $7\frac{1}{2}$ m. in length from N. to S. and $2\frac{1}{2}$ m. wide, it lies mostly in Hants, 5 m. S.E. of Alton. Formerly a crown forest, noted for red deer, it is mentioned in White's Natural History of Selborne.

Wolseley, GARNET JOSEPH WOLSELEY, 1ST VISCOUNT (1833-1913). British soldier. Born of

G. Wolseley
Histed

English ancestry at Golden Bridge, co. Dublin, June 4, 1833, he entered the 12th Foot in 1852, and fought in the Burmese War immediately. He served in the Crimean War, Indian Mutiny, and China expedition of 1860, when he was lieutenant-colonel. In command of the Red River expedition in Canada, 1870, he suppressed the insurrection of Riel and was created K.C.M.G.; and in 1873-74 he conducted the Ashanti campaign, the conclusion of which brought him a grant of £25,000 and promotion to major-general.

In 1882 Wolseley was appointed to the command in Egypt on the outbreak of the rebellion of Arabi Pasha, whom he decisively defeated at Tel-el-Kebir. For this service he was raised to the peerage as Baron Wolseley. His last active service was the Nile expedition for the relief of Gordon, 1884-85, at the conclusion of which he was created a viscount. Field-marshal from 1894, and commander-in-chief 1895-1900, he died March 26, 1913. Wolseley's writings include *The Soldier's Pocket-Book for Field Service*, 5th ed. 1886; and an autobiography, *The Story of a Soldier's Life*, 1903. "All Sir Garnet," i.e. perfect in detail, comes from his name. His title passed by special remainder to his elder daughter, Frances Garnet (1872-1936), who founded a college for lady gardeners at Glynde, Sussex. It died with her on Christmas Eve, 1936.

Wolsey, THOMAS (c. 1475-1530) English cardinal and statesman. The son of an Ipswich grazier, also by report a butcher, he distinguished himself at Magdalen College, Oxford, when very young, took orders, taught the sons of the nobility, and in 1500 received a Somerset living. Domestic chaplain at Canterbury and Calais, he was introduced to Henry VII's service by Bishop Fox. Through the same agency in 1511 when dean of Lincoln, he became a member of the council of Henry VIII, whose confidence he won. Wolsey rose rapidly, securing his position by a diplomatic triumph over Ferdinand of Spain and the emperor Maximilian by forming an alliance with France in 1514. That year he became successively bishop of Lincoln and Tournai, and archbishop of York; 1515 brought the cardinal's hat and lord chancellorship. His palace at Hampton Court was now begun.

Wolsey's great aim was to hold the balance between the two great potentates, the emperor Charles V and Francis I of France; to make England the arbiter of Europe, not by war, but by diplomatic manoeuvring. But he was perhaps already aiming at the papal throne. Though under his direction public business was dispatched and

Thomas Wolsey, cardinal and statesman
National Portrait Gallery, London

justice administered with an admirable rapidity and thoroughness, the arrogant manners and the sumptuous display of the low-born cardinal raised up enmity.

The fatal moment arrived when Henry resolved to marry Anne Boleyn. Wolsey was entrusted with the task of compelling the pope to take upon himself the onus

of annulling the king's marriage with Catherine of Aragon. When he failed to procure the king's desire, Henry turned and vented his wrath upon him. In 1529 Wolsey was dismissed from all his offices and deprived of all his honours save the archbishopric of York, and was confined to his diocese. A charge of high treason was launched against him, and while the fallen prelate was journeying south to meet his accusers, he died at Leicester abbey on Nov. 29, 1530.

In spite of the lines given him by Shakespeare, it is difficult to feel sympathy with this avaricious and arrogant man. His diplomatic triumphs were superficial and his schemes largely failed. Though he founded Cardinal College, now Christ Church, Oxford, many of the sums seized from monasteries went into his own pocket. The most unspiritual of churchmen, he also provided for his illegitimate son and daughter. But he made the monarchy powerful because wealthy, and checked any tendency to faction which might have followed the death of Henry VII. He suited his time to perfection, and admiration cannot be withheld in face of his amazing gifts of organization. See Christ Church; Henry VIII. Consult Lives and studies by M. Creighton, 1888; A. F. Pollard, 1929; H. Beloe, 1930; England's First Great War Minister, E. Law, 1916.

Wolsingham. Town and parish of Durham, England. It stands on the Wear and on the rly., 16 m. S.W. of Durham. Steel manufacture and agriculture are the occupations. Pop. 3,536.

Wolstanton. Eccles. parish and dist. of the bor. of Newcastle-under-Lyme, Staffs., England. Mainly residential, it has a colliery and brick and tile works.

Wolverhampton. Municipal and co. bor., and second largest town in Staffs., England. It is 13 m. N.W. of Birmingham, and is served by main rlys. The chief church is S. Peter's, a cruciformed sandstone founded in 994 and with part of its present structure dating from the 13th century; in its grounds is an ancient pillar known as the Danes' Cross. Public buildings include the town hall, municipal art gallery and museum, public library, Ban-

tock House museum and art gallery, and the magnificent civic hall opened in 1933. There are several hospitals and kindred institutions, also parks and a racecourse. Education is acknowledged to be first-class. Plans have been approved for a new civic centre within a ring road.

Wolverhampton is essentially an industrial town, but on the edge of a rich agricultural area. Locks

Wolverhampton, Staffordshire. The Municipal Art Gallery and Museum

and keys have been a special manufacture from early times, and the town also turns out pneumatic tires, rayon, aircraft and components, trolley buses and commercial vehicles, marine and Diesel engines, radio sets and batteries, ball and roller bearings, bicycles, hardware, two-stroke engines, aluminium foil and castings, machine tools, forgings, safes, and boilers. There are extensive iron and steel works, and to the S.E. are coal and iron mines. Repairing sheds of the former G.W.R. are located here. The borough charter of incorporation arrived in 1848. Wolverhampton was represented by three M.P.s up to the 1950 election, thereafter by two. Wolverhampton Wanderers are a famous football team, winners of the F.A. cup in 1893, 1908, and 1949; finalists in 1921 and 1939. Market days, Wed. and Sat. Pop. est. 158,610.

Wolverine. This bear-like carnivore of the weasel family is described under its other name of Glutton (*q.v.*).

Wolverton. Town of Bucks., England. It lies 2 m. E. of Stony Stratford, on a main rly. line and the Grand Union Canal. The church of Holy Trinity marks the site of an earlier building, and the site of an ancient castle is near. Wolverton is the educational centre of N. Bucks. There are rly. carriage and wagon works and a printing establishment. Pop. 9,521.

Woman (*A.S. wifmann*). Name given to the female of the human species. The term man, in the

sense of mankind, includes women and children as well as men. The long pregnancy of the human species, and the very long dependence of the young on the mother, gave woman in primitive communities no chance of competing on equal terms with man. Greater powers of endurance, however, compensated to some extent for her natural disabilities and her lesser physical and muscular

strength. Acquisition of a wife by abduction or capture—in theory at least giving the woman no choice—appears to have been customary in the earliest times. As mankind took to agriculture and to life in settled communities, the drudgery of the new way of life fell on the woman, compelled

by nature in any case to remain at home with her children. It was she who tilled the fields, gathered the harvest, cared for the domesticated animals, spun and wove animal and vegetable fibres into clothing, and did what simple food preserving was possible, while the man remained the hunter and the warrior protecting family and home from their human and animal enemies. The wife being now a valuable economic possession, her acquisition by purchase became usual, and remains so today in some primitive tribes in Africa and Australia.

In ancient civilizations the status of women varied. They enjoyed independence and a position of dignity in Sumeria and Babylonia; in ancient Egypt they had in general less independence, though they took part in religious observances, and a woman frequently acted as regent during a male ruler's minority. In ancient Roman law the unmarried woman remained dependent on her father or, after his death, some other male relative, the married woman on her husband. The Hindu religion placed women in a much lower position than men, teaching the observance of sati (*q.v.*) and refusing the right of re-marriage to child widows. Judaism and Islam regarded women as inferior to men; under Mosaic law and under Islam the husband only was entitled to divorce, and Islam also taught the segregation and veiling

Wolverhampton arms

present structure dating from the 13th century; in its grounds is an ancient pillar known as the Danes' Cross. Public buildings include the town hall, municipal art gallery and museum, public library, Ban-

of women. Segregation, after the Muslim conquest of N. India, spread to Hinduism, at least so far as high caste women were concerned. The woman in China had an inferior position, except in her domestic status as mother, in which she exercised authority within the home not only over her own sons, but over their wives and children also; infanticide, formerly widely practised in China, was applied to girls only. The Japanese woman had a low status, following, never walking alongside, her husband; although in Japan prostitution was an honourable profession, and no bar to subsequent marriage with the dowry earned by its practice.

The Christian religion changed the attitude of civilized communities to woman. In early Christian communities women had equality with men; women as well as men took part in religious celebrations, and suffered martyrdom. As the Church developed, embracing ideas not present in the original Christian beliefs, women lost their equality; but their right to the contemplative religious life was recognized, and they could become saints. The devotion accorded to Mary as the Mother of God led also to at least an ideal of respect and even reverence for woman, especially as mother; as souls to be saved women were never in religious theory regarded as inferior beings, though in the interest of stable matrimony the Church taught that wives should obey their husbands.

The 19th century demand by women, particularly in the U.K., for legal equality with men can probably be traced to the leisure, and boredom, forced on them by the steadily increasing impingement of machinery on home occupations. As spinning, weaving, baking, food preserving became industrial activities, workers' wives and daughters found their way into the new factories; but middle and upper class women were left with much less home claim on their labour and initiative, and therefore with a lessened status, and with time in which to give serious considerations to their wrongs and rights. They began to demand education, property rights, the franchise, and accession to the forms of work practised by their menfolk. General acceptance of the rule of law, and growing recognition of human rights, reduced the significance of woman's physical disadvantages, and made possible increasing de-

Wombat. Small nocturnal marsupial found only in Australia and Tasmania
W. S. Berridge, F.Z.S.

velopment towards equality of status between men and women in all the countries of the W. under the Christian dispensation—a development recognized more fully than anywhere else perhaps by the conscription of women for national service in the U.K. during the Second Great War.

The greater freedom achieved by women of the W. spread in some degree to non-Christian countries also: e.g. the constitution of the republic of Turkey abolished the veil, and an act of 1946 gave women the franchise; women in India were in 1948 made eligible equally with men for all state employment. See Divorce; Feminism; Man; Marriage; Marriage Law; Married Women's Property Acts; Women's Suffrage.

Irene Clephane

Woman in White, THE. Novel by Wilkie Collins, published in 1860. The plot, which concerns an elaborate conspiracy to obtain fraudulent possession of a fortune, is revealed in successive narrations by various characters, dovetailed with superb skill. The book placed Collins in the forefront of writers of mystery stories, and later writers of detective fiction owe much to his methods. The *Woman in White* is also memorable for the character of Count Fosco, a scoundrel as subtle as he is flamboyant, who has been called "the perfect villain."

Woman of No Importance, A. Comedy by Wilde, produced April 19, 1893, at the Haymarket Theatre, London, where it ran for 113 performances. As with other Wilde comedies, its theme is scandal in high society. The dialogue is consistently brilliant, the part of the worldly Lord Illingworth being enriched with some of the author's most celebrated *mots*. In the original production this part was played by Tree. The young lovers were played by Fred Terry and Julia Neilson.

Womb. Organ in the female in which the foetus is nourished and developed until birth. See Uterus.

Wombat (*Phascolomyidae*). Genus of marsupial mammals. Found only in Australia and Tasmania, it includes four species. Wombats are about 2 ft. long, and somewhat bear-like, with a strikingly bulky and heavy body, short broad head, small upstanding ears, and a rudimentary tail. The fur is thick and usually coarse, the colour ranging from black to yellowish brown. They live in burrows and feed at night upon grass and roots.

Wombwell. Urban dist. and town of the W. Riding of Yorks, England. Situated on the Dove, 7 m. N.W. of Rotherham, it is served by rlys. and by the Dove and Dearne Canal. Parts of the church of S. Mary are Early English. Pop. 18,365.

Wombwell, GEORGE (1778-1860). English showman. He was born at Maldon, Essex, and as a young man set up as a cordwainer in Soho. In 1804 he bought as a speculation two boa-constrictors for £75, and in three weeks more than cleared expenses by showing them. He thereupon started to build up a menagerie, which eventually became the best travelling show of its kind in Great Britain, containing some 20 lions. Wombwell died at Northallerton, Nov. 16, 1860.

Women's Army Auxiliary Corps. Body officially styled Queen Mary's Army Auxiliary Corps (W.A.A.C.). It was formed in March, 1917, and attached to the British army during the First Great War. Members were required to enlist for the duration of the war, and served as clerks, telephone operators, telegraphists, cooks, storewomen, and in ambulance and salvage work. At the time of the armistice 41,000 were serving, of whom 17,000 had been employed abroad. By the end of 1920 the corps was disbanded.

Women's Auxiliary Air Force. Body renamed in 1949 Women's Royal Air Force (g.v.).

Women's Institute. Organization of British countrywomen. Women's institutes started in Canada in 1897 when farmers' wives formed an organization for mutual information and entertainment as a counterpart to their husbands' farmers' clubs. The first W.I. in the U.K. was founded in 1915 by a Canadian, Mrs. Alfred Watt (1868-1948), at Llanfairpwllgwyngyll, Anglesey. The national federation of women's institutes was formed two years

later. The board of Agriculture and Fisheries (as it then was) recognized with a grant and other assistance the value of women's institutes in helping and teaching countrywomen to maintain food supplies during the First Great War, and continued to make a small annual grant towards working costs until 1927, after which, except for special temporary grants for particular purposes (e.g. handicraft teaching), the movement was self-supporting. There are some 7,000 women's institutes in England and Wales with a total membership of 380,000. A women's institute may be formed only in a village or small rural town. Institutes are linked in county federations, run by elected committees, and the whole movement is co-ordinated by the national federation, which also has an elected executive committee, with an advisory and educational rather than a directorial function. The movement is democratic, non-political, and non-sectarian, and is one of the few non-Catholic organizations to which R.C. women are allowed to belong. Its members are encouraged not only to amuse and educate themselves, but also to play a citizen's part in all matters of public welfare, particularly those affecting village housing and amenities and the interests of village women and children. Queen Mary and Queen Elizabeth belonged to Sandringham W.I. Scottish Women's Rural Institutes are similar.

During the Second Great War, many women's institutes ran fruit preserving centres where tons of fruit from private gardens that would otherwise have been wasted were, with the assistance of the ministry of Food, turned into jam for the preserves ration by voluntary workers; members also collected medicinal wild plants, taught handicrafts to sick soldiers, and helped to promote growing of food in gardens and allotments.

Women's Land Army. This organization is described under the heading Land Army.

Women's Mechanical Transport Service. For this service of the Second Great War, see First Aid Nursing Yeomanry.

Women's Royal Air Force. Women's auxiliary service raised in 1917 for non-combatant duties with the R.A.F. Popularly called Penguins, its members were employed chiefly as clerks, orderlies, and transport drivers, on aerodromes at home and abroad. It was disbanded in Dec., 1919.

In July, 1939, a number of companies of the Auxiliary Territorial Service (g.v.) which had

Women's Royal Air Force uniform

been attached to the R.A.F. since 1938 were permanently transferred to that service and formed the nucleus of the Women's Auxiliary Air Force. Recruits aged 17½ to 44 were accepted by the W.A.A.F., and, enlisting for the duration of hostilities, were liable for service at home or abroad. Personnel had the status of serving airmen, as the W.A.A.F. formed an integral part of the R.A.F.

At its maximum strength the W.A.A.F. numbered 180,000. More than 95 p.c. directly replaced men, and 70 p.c. were in skilled trades. Among the technically trained personnel were flight mechanics, fitters, electricians, and radar and radio operators. Many of the barrage balloons were manned by W.A.A.F. units. Its members were also engaged on ground staff work in sector stations, chiefly in operations rooms of Fighter and Bomber Commands.

Numbers of W.A.A.F. personnel were parachuted into enemy-occupied territory as instructors in ground signalling and radio operating to the resistance movements. Others served with the R.A.F. at overseas stations, and airwomen were extensively employed as coders. After D-day, W.A.A.F. medical orderlies served in the air ambulances bringing wounded from Europe. One of the four George Crosses awarded to women in the Second Great War was won by Corporal Joan Pearson, who dragged a wounded pilot from an aircraft carrying a fused 120-lb. bomb. In the Second Great War, 187 W.A.A.F. personnel were killed on active service.

There were seven commissioned ranks in the W.A.A.F.: assistant section officer, section officer, flight officer, squadron officer, wing officer, group officer, air commandant; these ranks were equivalent to pilot officer, flying officer, flight lieutenant, squadron leader, wing commander, group captain, and air commodore in the

R.A.F. Non-commissioned ranks were like those in the R.A.F.

On Feb. 1, 1949, the title was altered to the Women's Royal Air Force, which became a permanent part of the R.A.F. with an establishment of 26,000. A small number are trained for non-combatant flying duties.

Women's Royal Army Corps. Official title of the Auxiliary Territorial Service (g.v.) from Feb. 1, 1949. The W.R.A.C. forms part of the regular army and has units in the territorial army. Special titles of rank were replaced, 1950, by their army equivalents.

Women's Royal Naval Service. Women's auxiliary service established by the British Admiralty in 1917 to release Royal Navy personnel from shore duties. In 1918 the service had a maximum strength of 5,000, personnel being employed at naval bases as cooks, clerks, orderlies, drivers, and store-keepers. The W.R.N.S. was disbanded in Oct., 1919.

At the outbreak of the Second Great War, the W.R.N.S. was formed anew to replace various categories of naval personnel. In 1944 the W.R.N.S. had a maximum strength of 75,000, and personnel were serving in more than 100 categories directly replacing men. They manned boats in harbours, acted as boarding officers to convoys, served as cipher clerks and coders at the Admiralty and on troopships, maintained the invasion barges used on D-day, and worked as meteorologists. In the Second Great War 102 "Wrens" were killed on active service.

In Jan., 1949, the W.R.N.S. was placed on a permanent basis but remained a civilian organization under Admiralty control. Women joining the service do not enlist, but enrol, and are not subject to the Naval Discipline Act. The uniform is navy blue, with commissioned and non-commissioned rank and other badges in light blue. *Consult The Story of the Wrens, E. Bigland, 1946; Blue Tapestry, V. L. Mathews, 1948.*

Women's Royal Naval Service uniform

Women's Suffrage. Exercise of the franchise by women. The vote was a chief demand in the agitation for women's rights which began in the U.K. in the 19th century, and the demand was taken up by women in other countries. Women received the municipal franchise in the U.K. in 1869; but it was 1918 before the parl. vote was conceded to them at 30, 1928 before they were given it on the same terms as men.

The first parl. vote granted to women was for the state legislature of Wyoming, 1869; other states of the U.S.A. followed from 1910 onwards, and the vote for congress was conferred on them by the 19th amendment in 1920. New Zealand women received the vote in 1893; those of Australia received it for the federal parliament under the constitution of 1902 (for the states' parliaments it came later, beginning with Tasmania, 1903); those of Canada in 1917. In Norway women received the parl. suffrage in 1912, in Belgium only in 1948.

The first English society for female suffrage was formed at Sheffield in 1857; the first national society for women's suffrage in 1867. Until the new century this and similar bodies carried on a campaign, holding meetings all over the country, but not getting into the news, for it was a cardinal point in their strategy that members must demonstrate that a woman demanding a vote remained a lady. Then, led by the Pankhurst (q.v.) family, the Women's Social and Political Union, which Emmeline Pankhurst had helped to found in Manchester in 1903, developed aggressive tactics.

These started in Manchester in Oct., 1905, at a meeting addressed by Sir Edward (later Lord) Grey; Annie Kenney and Christabel Pankhurst, each displaying a small banner inscribed "Votes for women," asked in turn at question time, "Will a Liberal govt. give votes to working women?" They were not answered, but were seized by stewards and thrown down the steps of the hall to the street, where, until arrested for obstruction, they addressed the crowd which collected. Given the alternative, the one of 10s. fine or seven days, the other 5s. fine or three days, they chose prison. This disturbance at a prospective cabinet minister's meeting was reported in the newspapers, and from that time the W.S.P.U. devoted itself to the invention and carrying

out of incidents which would have news value: they drove up to the house of commons in a closed furniture van, to avoid being prevented by the police from reaching their goal; they padlocked themselves to the grille of the ladies' gallery in the house, and to the railings of 10, Downing Street; from a boat on the river they harangued members taking tea on the terrace. It was five years before the "suffragettes," as the newspapers dubbed them, took to violence—smashing windows, slashing pictures, setting fire to letters in pillar boxes and to empty buildings, slapping policemen's faces, destroying golf greens. In prison they went on hunger strike, and even thirst strike.

The govt. countered such demonstrations first by forcible feeding, then by the so-called Cat and Mouse Act, 1913, under which a "suffragette" prisoner, ill through hunger striking, was released on licence, to be re-arrested when sufficiently restored to go on serving her term. Many women incurred permanent ill-health as a result of their prison experiences; the only martyr to death was Emily Davison, who died from injuries received when she threw herself in front of the king's horse at the Derby of 1913. Mrs. Pankhurst was slowly serving out a three years' sentence for felony in connexion with the blowing up of Lloyd George's Walton home when the First Great War began. The W.S.P.U. immediately stopped its campaign, and offered its services to the govt., which released all women in prison for offences in relation to suffrage activities. The vote was accorded to women of 30 under the Representation of the People Act, 1918; another Act of the same year gave women the right to sit in the house of commons. See Feminism.

Irene Clephane

Women's Voluntary Services.

British association formed on May 16, 1938, as women's voluntary services for civil defence, by the marchioness of Reading with the support of the Home office, to coordinate the efforts of existing women's voluntary organizations in the event of war, and prevent the overlapping of their activities. The largest single body affiliated to it was the national federation of women's institutes

(see Women's Institute). When war came, the W.V.S. covered 65 organizations; it also began to recruit individual workers. Its

first concern was with safe removal of children and pregnant mothers from vulnerable areas; later W.V.S. personnel manned A.R.P. rest centres, supervised country nurseries for evacuated children, established and staffed service canteens, drove ambulances, organized the collection of furniture from country homes to assist people homeless in London through bombing to re-furnish, helped to man the incident inquiry points set up on the scene of heavy air raids, staffed the food flying squad vans sent into bombed areas, knitted more than a million pieces of clothing for the forces and for the children of Europe, set up 500 second-hand clothing exchanges, etc. In 1940 the W.V.S. became authorised distributor of U.S. war relief.

At the peak of its activities the W.V.S. had a maximum strength of 1,215,000. Personnel were unpaid and had no ranks, though there were certain administrative designations: e.g. county organizer, centre leader. In May, 1947, the govt. established the W.V.S. on a permanent basis. The uniform is an olive-green skirt, jacket, and hat with burgundy-coloured blouse and trimmings.

Wong, ANNA MAY (b. 1907). American film actress. Her real name was Wong Liu Tsong (Chinese, frosted yellow willow), and she was born to Chinese parents in Los Angeles, Jan. 3, 1907. She entered films and gained immediate fame by her performance in *The Thief of Bagdad*, 1924. British films in which she played included *Piccadilly*, 1929; *Chu Chin Chow*; *Java Head*; and she went on the stage at the New Theatre, London, in *The Circle of Chalk*, 1929. Back in the U.S.A. she was seen in the films *Limehouse Blues*, 1935; *Penthouse Mystery*, 1941.

Wong, WEN-HAO (b. 1889). Chinese geologist and politician. He was born in Chekiang prov.,

Women's Voluntary Services uniform

Women's Voluntary Services badge

and educated at Louvain University, studying geology. On his return to China he taught in Peking and Tsing Hwa universities, becoming during 1921-38 director of the national geological survey of China, in which capacity he wrote books soon recognized as brilliant. In the 1930s he came to the fore in politics, and was given the task of organizing China's defence industries. Minister of economic affairs in 1938, he was responsible for handling lend-lease material during the Second Great War. Vice-president of the executive yuan (*i.e.* vice-premier) during 1945-47, Dr. Wong was president of that body (*i.e.* premier) May-Nov., 1948.

Won-San. Former treaty port of Korea. It is situated on the Sea of Japan, lying 163 m. N. by E. of Seoul. Won-San possesses an extensive harbour, and was opened to foreign trade in 1883. Pop. 31,780.

Wonthaggi. Town of Victoria, Australia. It is on the coast, 86 m. by rly. S.E. of Melbourne, and is the centre of a large coal-bearing area. Pop. 5,808.

Wood (A.S. *wudu*). Area of land covered by a natural or semi-natural growth of trees, shrubs, and ground vegetation as distinct from a plantation which, as its name implies, is planted. In a commercial sense the word wood indicates the trunk and larger branches of a tree divested of bark and sawn up. Botanically, wood may be taken to mean that part of the tree trunk between pith and bark or, more exactly, the xylem elements (Gr. *xylon*, wood) of the vascular bundles which run through the roots, stems, and leaf veins of all plants. It is the perennial increase and lignification (*q.v.*) of the xylem tissue that builds up the dense woody structure forming the trunks of dicotyledonous (including hardwoods) and gymnospermous (coniferous, or softwood) trees.

A cross-section of the trunk of a dicotyledon shows distinct concentric lines or annual rings, which are made up of vascular bundles arranged concentrically between the cortex and pith, each bundle containing several kinds of specialised cells, the arrangement and number of these woody elements varying in different plants. The inner cells, long in proportion to their width, form tubes empty of protoplasm from which most of the transverse walls have disappeared, while the original cellulose of the young cell wall has

become lignified. The walls of the tubes, thickened by lignification, are covered with pits or dots, which are thin places in the cell substance through which water passes from surrounding tissues. These pitted or dotted vessels are the largest of the xylem elements and their function is to carry through the plant the water taken in by the roots. Very similar, but narrower and tapering, are the tracheids, woody, pitted cells divided by transverse walls, which also carry water. Other elements of the xylem are wood fibres—long, thick-walled, narrow cells with tapering ends which add to the strength of the wood cylinder, and wood parenchyma composed of cells filled with starch grains and shorter in proportion than other xylem cells.

The xylem of conifers differs from that of dicotyledons in being made up of tracheids, with no true vessels or wood fibres. The resin canals characteristic of conifers are often present in all parts of the plant except the xylem tissue. In some genera, however, *e.g.* Pinus, they are found in the wood, and in cross-section may be seen as narrow punctures.

The outer part of each vascular bundle, that nearest the cortex, is made up of phloem (*q.v.*) cells, long vessels containing abundant protoplasm, the transverse cell walls perforated by holes through which delicate ropes of protoplasm pass. These perforations give the name sieve tubes to the vessels, and through them are transported the sugar, proteins, etc., manufactured by the leaves. The phloem tissue contains also elongated companion cells which have no part in carrying the proteins, etc.; and to the outside of the bundle are bast fibres, long, narrow cells with lignified walls.

Between xylem and phloem lies a band of young growing cells, the cambium, which adds annually a new ring to the trunk. This, produced as undifferentiated cells, becomes on the inner or xylem side specialised and lignified as new xylem tissue, and on the outer side of the cambium ring a new layer of phloem cells. The cambium ring is sappy, especially during spring growth when the cells first formed are of a large and open texture to carry the spring rise of sap. A band of large cells marks the edge of each annual ring, the number of annual rings proving the age of the tree. Many species of tropical evergreen tree, *e.g.* mahogany, have, how-

ever, no seasonal change of growth rate and show no annual rings.

Between the vascular bundles there run out from pith to cortex layers or plates of thickened, lignified parenchyma cells which in a cross-section are seen to radiate from the central pith. As the trunk increases in thickness the rays increase in length, the new growth being added by the cambium ring. Starch is stored in this parenchyma tissue.

Inside the cambium ring of new growth lies the younger wood, the sapwood or alburnum; the inner rings of earlier growth become drier, darker in colour, and denser in texture, functional activity ceases in the inmost layers, and they become a dead, supporting column, while chemical changes occur, the cells being gradually infiltrated with gums, resins, oils, etc. This is the heartwood or duramen, in timber trees the most valuable part of the wood. The important timber trees are noted under their own names, *e.g.* Cedar; Ebony; Ironwood; Jarrah; Logwood; Mahogany; Oak; Redwood; Rosewood; Satinwood; Yellow Wood.

In monocotyledonous stems, a group including palms and yuccas, the vascular bundles resemble on the whole those of dicotyledons, but since the xylem and phloem elements are separated and there is no cambium ring adding to their thickness, they are closed bundles with no secondary growth. In most monocotyledons the bundles are irregularly distributed through the stem or trunk, so that in trees of this kind there is no increasing woody cylinder, and they form no true timber. *See* Forest; Forestry; Timber; Tree; Wood Pulp.

Ivy Massee

Wood, ANTHONY (a) (1632-95). English antiquary. Born at Oxford, Dec. 17, 1632, he studied at Merton College, and afterwards applied himself to collecting materials bearing on Oxford history. His MS., purchased for £100, was published in Latin by the university as *Historia et Antiquitates Univ. Oxon.* 1674. The rewritten MS. came out posthumously as *History and Antiquities of the Colleges and Halls, 1776-90*; and of the University of Oxford, 1791-96. *Athenae*

Anthony Wood,
English antiquary
From an old print

Oxonians, 1691-92, comprised biographies of Oxford undergraduates from 1500. Wood died Nov. 28, 1695. *Consult* Life and Times, ed. L. Powys, 1932.

Wood, CHRISTOPHER (1901-30). British painter. Born at Knowsley, near Liverpool, the son of a doctor, he was educated at Marlborough and Malvern colleges. A three years' illness contracted at 14 left him with a limp and constant pain. In 1920 he decided to become a painter, and during the first half of 1921 was a student at Julian's in Paris. He then wandered through most of Europe, and in N. Africa. Wood designed decor and costumes for the Diaghilev ballet Romeo and Juliet, 1926, and for a Cochran ballet, 1929, besides painting numerous pictures—40 in June and July, 1930. He was killed by a train at Salisbury station Aug. 21, 1930. His work was notable for clear colour, and for its childlike yet assured manner.

Wood, ELLEN (1814-87). British novelist, familiar as Mrs. Henry Wood. Born at Worcester, Jan. 17,

Mrs. Henry Wood,
British novelist.
After R. Easton

1814, her maiden name being Price, she married in 1836 Henry Wood, and spent twenty years in France before settling in London in 1856. In 1860 her novel, Danesbury House, won a prize of £100 offered by the Scottish Temperance League. This was followed in 1861 by East Lynne, which achieved extraordinary success, not only as a book but in dramatic versions. Other stories include Mrs. Halliburton's Troubles, 1862; The Channings, 1862; Dene Hollow, 1871; Johnny Ludlow, 1874. After 1867, her novels appeared in The Argosy, of which she was the editor and proprietor. She died Feb. 10, 1887.

Wood, HAYDN (b. 1882). British composer. He was born at Slaithwaite, Yorks, March 25, 1882, and studied the violin, and later composition with Stanford, at the R.C.M. He toured as violinist with Albani for eight years. Of his some 200 songs the best-known are Roses of Picardy (a hit during the First Great War), A Brown Bird Singing, and It Is Only a Tiny Garden—sentimental ballads which had a vogue on the concert platform, and became favourites of amateur singers. A

tone-poem, Mannin Veen (Dear Isle of Man), is often played.

Wood, MRS. HENRY. British novelist, entered as Wood, Ellen.

Wood, SIR (HENRY) EVELYN (1838-1919). A British soldier. Born at Cressing, near Braintree, Essex, Feb. 9, 1838, and educated at Marlborough, he entered the navy as a cadet in 1852, and served with distinction with the Naval Brigade in the Crimean War. Invalued home, he obtained a commission in the 13th Dragoons and went to India, where in 1858 he won the V.C. He served in the Ashanti campaign, 1874, in the Kaffir, Zulu, and Boer Wars, 1879-81, commanded a brigade in the Egyptian campaign, 1882, and during 1883-85 was sirdar of the Egyptian army, which he reorganized. He saw his last active service in the Nile expedition, 1884-85. G.C.B. in 1891, and a field-marshal from 1905, he died Dec. 2, 1919. He wrote an autobiography, From Midshipman to Field-Marshal, 1906; Winnowed Memories, 1917.

Wood, SIR HENRY JOSEPH (1869-1944). English musician. The founder and conductor for 50 years of Queen's Hall promenade concerts was born March 3, 1869, to a musical family in London, where his father was an optician. The boy learnt the organ at S. Sepulchre's, Holborn, and gave recitals before proceeding in 1886 to the R.A.M. Already he was composing cantatas and working out orchestrations. In 1888 he made his bow as a conductor, in the pit at various London theatres; he helped Sullivan to produce Ivanhoe, and discovered his abiding affection for Tchaikovsky's music. The promenade concerts began on Aug. 10, 1895, and Wood's work is considered in the article on them; it suffices to add that he did more for music in England than any other man of his time. Though always insisting on a large proportion of British works in his

Sir Henry Wood,
British conductor

programmes, he was early in popularising the Russians, also Brahms and Dvorak, in the U.K.

Sir Henry was knighted in 1911. He conducted at all the major festivals up and down the country. When the Queen's Hall management wished to discontinue the "proms," he took over responsibility with the aid of the B.B.C. His jubilee with the baton was celebrated with a grand festival in 1938. That year he published My Life of Music. Amusing anecdotes gathered about his name. Meanwhile he had sprung a joke by announcing that Paul Klenovsky, whose arrangement of Bach's toccata and fugue in D minor had been discovered by Wood, was himself. The fantasia on British sea songs had been composed for Trafalgar day, 1905, and played annually to conclude the "proms." In 1944 Sir Henry was taken ill just as the flying bombs caused the concerts to be cancelled, but went on conducting for broadcast until July 28, and died Aug. 19.

Wood, SIR (HOWARD) KINGSLEY (1881-1943). British politician. After practising for some years as a solicitor, he entered parliament as Conservative member for N. Woolwich in 1918. Parl. secretary to the ministry of Health 1924-29, he piloted the Summer Time Act, 1925, through the commons. From 1931 he was successful as postmaster-general, reducing telephone and telegram rates, and inaugurating a publicity campaign for the wider use of post office facilities. As minister of Health 1935-38, he was responsible for the Contributory Pensions Act, 1937, which enabled persons of limited means, not insured under then existing legislation, to secure widows', orphans', and old age pensions by voluntary contributions. He became Air minister in 1938, and in the Churchill govt. of 1940 chancellor of the exchequer. He died suddenly when about to bring in an emergency budget, inaugurating the pay-as-you-earn scheme, Sept. 21, 1943. Sir Kingsley was knighted in 1918.

Wood, JOHN GEORGE (1827-89). British naturalist. A Londoner, he was born July 21, 1827, and educated at Ashbourne and Merton College, Oxford. Ordained in 1852, he divided his time between

literary and clerical work. After serving as chaplain at S. Bartholomew's Hospital, 1856-62, he resigned and devoted the rest of his life to lecturing and writing on natural history, his books including *Natural History of Man*, 1868-70; *Insects at Home*, 1871; *Half-hours with a Naturalist*, 1885; *The Zoo*, 1889. Wood died at Coventry, March 3, 1889.

Rev. J. G. Wood,
British naturalist

Wood, MATILDA CHARLOTTE (1833-1915). British actress, better known as Mrs. John Wood. Born in

Mrs. John Wood,
British actress

Liverpool, she made her stage debut at Southampton in 1841, but scored her first great success in burlesque in the U.S.A., appearing at Boston in 1854. Returning to England twelve years later, she played Miss Miggs in *Barnaby Rudge* at The Princess's. In 1869 she took over the St. James's Theatre, which she ran successfully for four years. After this, at the old Court Theatre, she made a series of successes in Pinero farces. She played for the last time in 1905 in *The Prodigal Son*, at Drury Lane. She died Jan. 11, 1915.

Woodard Schools. Group of 16 English public schools, including Ardingly, Hurstpierpoint, and Lancing (*q.v.*). A scheme to start a series of good schools for the children of middle-class parents was first advanced by Nathaniel Woodard, then an obscure clergyman, in 1848. In the same year Woodard started S. Nicholas's school, Shoreham, which later found a new home at Lancing. When he died in 1891 there were ten of his schools in existence, and a corporation was established to govern them. Others were later opened, for both boys and girls. *Consult* *Story of Woodard Schools*, K. E. Kirk, 1937.

Woodbine or **WOODBIND.** Name originally of general application to twining plants, but lately almost restricted to the Honeysuckle (*q.v.*).

Woodbine Willie. Nickname of the Rev. G. A. Studdert Kennedy. *See* Kennedy.

Woodbridge. Market town and urban dist. of Suffolk, England. It stands on the Deben, 10 m. from

its mouth, and has a rly. station 80 m. N.E. of London. The chief building is the fine Perpendicular church of S. Mary the Virgin. An old grammar school is now housed in large modern buildings, and there is a hospital. Woodbridge is chiefly an agricultural centre. Edward Fitzgerald lived here for many years. A religious house was founded here in the 12th century; in the 16th Thomas Seckforde built an abbey on its site. Woodbridge and Sudbury is the name of a co. constituency. Pop. 5,101.

Woodcarving. Art of ornamenting wood with carved designs. It has been practised by almost all peoples in all eras. It flourished among the Egyptians, of whose work some wonderful pieces still exist, and among the Greeks and Romans. Its most flourishing period, however, coincided with the great days of Gothic architecture, 12th to 15th centuries, and to it belongs much of the magnificent carved work, choir stalls, screens, etc., seen in European cathedrals and churches, and much decorative work in secular buildings. Later, carving was directed more to household furniture, and existing carved chests, chairs, etc., of the 16th and 17th centuries show the excellence of much of this work. Grinling Gibbons (*q.v.*) is regarded as the greatest of English woodcarvers. Oak is the most suitable wood, but chestnut, mahogany, and walnuts are used.

Woodchuck. Popular name of a species of marmot occurring in N. America. *See* Marmot.

Woodcock (*Scolopax rusticola*). British wild bird. Belonging to the plover tribe, it is closely allied to the snipe. The plumage is reddish-brown barred and striped with black on the upper parts, and pale brown barred with darker brown below. Its long and straight beak is a characteristic feature. The bird is about 14 ins. long. It

occurs in most parts of Great Britain, the majority of the birds being winter migrants. The nest consists of a hollow in the ground, among dead leaves on the borders of woods. The woodcock keeps under cover during the day, and visits its feeding-grounds at dusk.

Woodcock. Long-beaked British game bird of the plover tribe

Its food consists mostly of worms and grubs procured by probing damp soil with its beak. The bird is highly esteemed for the table.

Woodcraft. The knowledge of forest conditions and open-air phenomena which enables human beings to supply themselves with the essentials of life in the wilderness. Primitive peoples are expert in woodcraft, as it enables them to make tools and weapons, prepare skins for clothing, produce baskets and cooking utensils, build and maintain fires, and track down animals for food. An expert woodcraftsman knows every type of tree and plant. He can protect himself from animals, forecast the weather, and make long journeys without a compass. Woodcraft reached its highest degree as a science during the colonisation of America, when the pioneers were forced to fend for themselves. They learned much, in both N. and S. America, from the native Indians. Because it teaches self-reliance, woodcraft is the basis of training for boy scouts, and the Woodcraft League in the U.S.A.

Woodcut. Popular name for a Wood Engraving (*q.v.*).

Woodcuts. Hamlet of Dorset, England. The site of a prehistoric

Woodbridge, Suffolk. The Town Hall

village, it is 6 m. N.W. of Cranborne. With neighbouring villages (Rotherley, Woodyates) it was dug 1884-90, when bronze and iron implements, Samian ware, Roman coins, and hypocausts attested the Romano-British occupation of a pre-Roman settlement.

Wood Distillation. Process by which wood is broken up or converted into various substances. When wood is subjected to

destructive distillation it yields many valuable products, the chief being pyroligneous acid (crude acetic acid), acetone, wood naphtha, and tar oils. Charcoal remains behind in the retort. The substances obtained vary according to the wood, pinewood yielding more tar and less pyroligneous acid than hard woods. See Distillation; Distilling.

Wood Engraving. Printing process. It is often called woodcut, since the wood engraver obtains his block by cutting away, with a tool called a graver, the wood (usually boxwood, which has a particularly close grain, though coarser woods are also used) to a certain depth from all the blank portions between and around the lines or black masses of his design, leaving those lines or masses standing in relief, and so preserving a surface from which a print can be taken. There is, however, another method, the white line method, by which the above process is reversed, the lines being cut into the block, instead of the wood between them being cut away, and thus printing white, like a chalk drawing on a blackboard. Bewick (*q.v.*) was the chief British exponent of this style.

Wood engraving is of great antiquity. In the first half of the 16th century the art flourished in Germany and the Low Countries. In Italy it was used chiefly for chiaroscuro prints, which process is virtually identical with that of colour-printing from relief-blocks at the present day. But in England after 1630 wood-cutting was largely ousted by metal engraving until temporarily revived c. 1784 by Bewick, who introduced the graver instead of the knife as the cutting tool. About 1860 there was a great revival, encouraged by the brothers Dalziel and others, in the art for book and magazine illustrations. See Drawing; Engraving; Illustration. Consult A Brief History of Wood Engraving, J. Cundall 1895.

Wooderson, SYDNEY CHARLES (b. 1914). English runner, born in London, Aug. 30, 1914. A solicitor's clerk, he joined Blackheath Harriers and by 1935 was British mile champion. Hopes that he would win the 1,500 metres race at the 1936 Olympic Games were disappointed when an injured ankle let him down. On Aug. 28, 1937, at Motspur Park, he set up a world record for the mile in 4 mins. 6.4 secs. (since beaten by Swedish runners, and by Wooderson in 4 mins. 4.2 secs.). He followed this

next year with the fastest half-mile in 1 min. 49.2 secs., and the best three-quarter in 2 mins.

Sydney Wooderson,
English runner

59.5 secs. in 1939. Competing at Princeton, U.S.A., he lost a race by being put out of his stride in circumstances which gave rise to the suspicion that another runner had jostled him. In 1946 Wooderson broke the British 3-mile record in 13 mins. 53.2 secs.

Woodfall. Name of an English family of printers and journalists. Henry Sampson Woodfall (1739-1805) conducted The Public Advertiser, 1758-93, and printed the letters of Junius (*q.v.*), and works by Pope and Thomson. His brother William (1746-1803), friend of Garrick and Goldsmith, edited The London Packet, 1772-74; and in 1789 established The Diary, the first journal to publish parliamentary debates on the morning after they had taken place.

Woodford. Part of the urban dist. of Wanstead and Woodford, Essex, England. On the edge of Epping Forest, it is 11 m. N.E. of London, and is served by rly., bus, trolley bus, and Green Line. S. Mary's church was restored in the 19th century. Woodford Wells and Woodford Green are residential parts. Woodford gives its name to a bor. constituency, for which Winston Churchill sat from 1945. Pop., with Wanstead, 60,000.

Woodforde, SAMUEL (1763-1817). British artist. Born March 29, 1763, at Castle Cary, Somerset, he studied at the Royal Academy, first exhibiting in 1784. After travelling in Italy, he settled in London in 1791. Among his works are A Vestal; The Soldier's Widow; Pan Teaching Apollo. He became A.R.A. in 1800, and R.A., 1807. He died July 27, 1817.

Woodfull, WILLIAM MALDON (b. 1897). Australian cricketer, born in Victoria, Aug. 22, 1897. Striking performances for his state won him a place in the team which toured England in 1926, when he made centuries in the Leeds and Manchester test matches. He thrice passed the hundred when England returned the visit, and in 1930 was made Australian captain, as he remained until 1934. Opening the innings, Woodfull was extremely difficult to get out; almost, throughout two seasons

nobody clean bowled him. The controversy over "body-line" bowling came to a height during his leadership.

Woodgate, (HUBERT) LESLIE (b. 1902). British musician, who was born April 15, 1902, and educated at Westminster and the R.C.M. After a period as secretary to Roger Quilter, he went in 1929 to the B.B.C., where his name was to become a household word as director of the chorus. Two compositions, Hymn to the Virgin, and The White Island, received a Carnegie award in 1923; he wrote chamber music and part songs. An oratorio, Simon Peter, was performed 1949.

Woodgate, WALTER BRADFORD (1840-1920). British oarsman. Born Sept. 20, 1840, he was educated at Radley and Brasenose College, Oxford. On three occasions he rowed in the winning boat of the university pairs, won the O.U.B.C. sculls in 1861 and 1862, and was a member of the winning crew against Cambridge in 1862 and 1863. He was called to the bar in 1872, and published several works, among them the Badminton Library vol. on Boating; and Reminiscences of an Old Sportsman. He died Nov. 1, 1920.

Wood Green. Bor. of Middlesex, England. It lies N. of Hornsey, W. of Tottenham, S. of Southgate, E. of Finchley. It has some industry, including a sweet factory, but is chiefly a residential suburb of London, with communications by rly., tube rly., bus, and trolley bus. Pop. est. 52,290.

Woodhall Spa. Urban dist. and inland watering-place of the Lindsey div. of Lincs, England. It is 6 m. by rly. S.W. of Horncastle. The place is frequented for its bromo-iodine springs, discovered in 1811. It has a championship golf course, and in Jubilee Park are an open-air swimming bath and other sports facilities. Agricultural shows, gymkhanas, and flower shows are held. Pop. 1,372.

Woodhenge. Prehistoric circle in Wilts, England. Standing 2 m. N.E. of Stonehenge, it consists of six concentric circles of wooden uprights, the outermost of which contained 60 posts and was 144 ft. in diam. It was surrounded by a ditch and an outer earthen bank, now ploughed out. The socket holes of the posts were discovered from the air in 1925, and the monument was then excavated. It is dated to the time of the beaker folk who arrived in Britain c. 1900 B.C., shortly before the Bronze Age.

Woodlouse. Member of a group of Crustacea, constituting the family Oniscidae of the order Isopoda. Woodlice are unusual for this group in being terrestrial in habit. Usually brownish or slaty-grey in colour, a woodlouse has one pair of evident antennae, seven pairs of walking legs; and the abdominal limbs are used for breathing air. In some kinds the fore pairs of these limbs bear air tubes, suggesting a resemblance to the tracheae of insects. The jointed nature of its shell or carapace enables one species to roll up into a little ball when disturbed. Nocturnal in habit, it likes situations among decaying vegetation or leaf-mould, and under bark, stones, logs, boards, plant pots, etc. Some kinds occur in great numbers in commercial greenhouses, where all parts of seedlings, young or tender plants, may be attacked. The common British species are *Oniscus asellus* and *Armadillidium vulgare*.

Woodpecker (Picidae). Family of picarian birds. They are distinguished by feet adapted for climb-

Woodpecker. Three British species. 1. Lesser spotted. 2. Green. 3. Greater spotted.

W. S. Herridge F.Z.S.

ing, and a modification of the barbed tongue which enables it to be thrust forward to extract insects from crevices. They include numerous species, found in virtually all temperate and tropical regions, with the exception of Australia and the Pacific Islands. In Great Britain there are three species.

The green woodpecker (*Picus viridis*) is common in S. and mid-England, but is rare in Scotland and Ireland. The plumage is olive-green on the upper parts, crimson on the crown of the head, black on the face, yellow on the rump, and greenish-grey below. It excavates a hole in a tree-trunk as a nesting site, usually selecting a rotten tree.

The greater spotted woodpecker (*Dryobates major*) is smaller and less common. The plumage is black on the upper parts, crimson on the back of the head, and white and crimson below. The bird is rare in Scotland, and is a winter migrant to Ireland.

The lesser spotted woodpecker (*D. minor*) is about 5 ins. long, and has the plumage black on the back, wings, and tail, with bars of white; bright red on the crown; and dusky white on the lower parts. Its distribution is similar to that of the last-named species. See Eggs, colour plate.

Wood Pigeon (*Columba palumbus*). Alternative name for the Ring Dove (*q.v.*).

Wood Pulp. Material manufactured by the disintegration of wood, and chiefly used in paper making. The wood is disintegrated either by mechanical means or by chemical action. Fir, spruce, poplar, aspen, and hemlock are the woods chiefly employed, and the wood by mechanical disintegration is ground under water, but the fibres so produced are shorter than those obtained chemically, and the pulp itself produces an inferior kind of paper. In the chemical preparation of the pulp the wood is boiled under pressure, after having the knots and bark removed and being cut in small cubes about $\frac{1}{2}$ to $\frac{3}{4}$ in. in size, and bruised between rollers. The boiling solution is either bisulphite of magnesium or calcium, or sulphate of soda. See Lumber; Newfoundland: Paper.

Woodruff (*Asperula odorata*). Perennial herb of the family Rubiaceae. A native of Europe and N. and W. Asia, it has a creeping rootstock that sends up many short stems. The lance-shaped, firm, smooth leaves are arranged in whorls at intervals up the stem. The tiny white funnel-shaped flowers are clustered at the top. The whole plant in drying gives off the fragrance of new-mown hay.

Wood Rush (*Luzula sylvatica*). Perennial herb of the family Juncaceae, indigenous to Europe. It has a short tufted rootstock with runners. The stems are about

Wood Rush. Left, clustered flowers; right, leaves

two feet high, with a few short leaves, and the leaves from the rootstock are grass-like, often a foot long, slightly fringed with silky hairs, and channelled down the middle. The pale brown flowers are very minute, in loose clusters.

Woods, MARGARET LOUISA (1856-1945). British novelist and poet. Born at Rugby, daughter of G. G. Bradley, later dean of Westminster, she married in 1879 H. G. Woods (1842-1915), afterwards president of Trinity College, Oxford, and master of the Temple. She made a great impression with her realistic novel, *A Village Tragedy*, 1887. Lyrics and Ballads, 1889, showed her poetic gifts. There are fine passages in a poetic drama, *Wild Justice*, 1896. Collections of verse appeared in 1907 and 1911. Other books were *Come Unto These Yellow Sands*, 1914; *Esther Vanhomrigh*, 1923; *The Spanish Lady*, 1927. M. L. Woods died Dec. 1, 1945.

Wood's Halfpence. Term given to the copper coinage, amounting to £108,000 in value, which Robert Wood, an English ironmonger, circulated in Ireland. He purchased the rights from the duchess of Kendal, mistress of George I, to whom the patent had been granted in 1722. In spite of the undoubted shortage of copper, the Irish people regarded the amount of copper to be put in circulation as excessive, and the strongest opposition developed, Swift taking a leading part with his celebrated *Drapier Letters*. In 1725 the patent was revoked.

Woodsia. Genus of ferns of the family Polypodiaceae. Natives of the N. temperate and Arctic regions, the Andes, and S. Africa, they have short tufted rootstocks, and the frond-stalk is usually joined near the base. The leafy portion is cut into leaflets (pinnae) from the sides. There are from three to five heaps of spore

Woodruff. White flowers of this fragrant herb

Woodsia. Fronds and roots of *W. ilvensis*

capsules on the back of each pinna, each enclosed in a bag which splits up later into hairlike segments.

Wood's Metal. Alloy with a melting point (70° C.) well below those of the constituent metals. Its composition is about 4 parts bismuth, 2 parts lead, and one each tin and cadmium. It is used for low-melting safety fuses for electric kettles; automatic anti-fire sprinklers built into ceilings; jokers' teaspoons which melt when placed in hot tea. See Alloy.

Wood Sorrel (*Oxalis acetosella*). Perennial herb, member of the family Geraniaceae. A native of

Wood Sorrel. Flowers and trifoliate sensitive leaves

Europe, Asia, N. Africa, and N. America, it has a slender, creeping, scaly rootstock, from which the leaves and flowers arise direct, on long slender stalks. The leaves are divided into three heart-shaped leaflets, after the manner of a clover-leaf. These leaflets fold, and droop close to the stalk in darkness and rain. The solitary flowers, nearly an inch across, are white, delicately veined with purple. See Leaf; Oxalic Acid.

Woodspring Priory. Remains of an Anglo-Norman building near Weston-super-Mare and the Bristol Channel, Somerset, England. It was founded in 1210, traditionally by William Courtenay, grandson

of one of Becket's murderers, as an expiatory chapel. Here was found the Becket cup, and here may still be seen the tower, tithe barn, fish pond of the monks, and spring from which the priory was named.

Woodstock. Mun. bor. of Oxfordshire, England. It is 72½ m. N.W. from London on the rly., the station being known as Blenheim and Woodstock. It is a centre of the glove-making industry, and has a history going back to the time of Ethelred II. The chief building is the church of S. Mary Magdalene. Of its famous manor house, built by Henry I, the last vestige disappeared in 1723, soon after the completion of

Woodstock arms

Blenheim (q.v.). Fair Rosamund (q.v.) is said to have lived at Woodstock in a bower built for her by Henry II. In the town the Black Prince and other princes were born, and Elizabeth was a prisoner, 1554. Chaucer's house, until about 1570 called Hanwell House, is said to have been part of the estate of the poet's grand-daughter. Pop. 1,850.

Woodstock. Town of New Brunswick, Canada. It stands on the St. John river, 64 m. W. of Fredericton, and is a station on the C.N.R. and C.P.R. It is the centre of a farming dist. Pop. 3,593.

Woodstock. Town of Ontario, Canada. It is on the Thames river in Oxford co., 87 m. S.W. of Toronto, and is on the main lines of both C.P.R. and C.N.R. There are machine shops, while furniture, organs and pianos, hardware, and textiles are made. Around Woodstock is a rich dairying and agricultural district. Pop. 12,461.

Woodstock, or THE CAVALIER. Twenty-second of the Waverley novels, by Scott, published 1826. It is a tale of Charles II's exile, flight, and return, with its main interest centred in the family of Sir Henry Lee, the Cavalier and Ranger of Woodstock. The plot was unconsciously followed by Thackeray in Esmond.

Wood Street. London thoroughfare, E.C.2. It opens N. from

Cheapside to London Wall between Gutter Lane and Milk Street. A plane tree at the S.W. corner marks the site of the church of S. Peter, West Cheape, destroyed in the Great Fire of 1666. The church of S. Alban, E. side, was rebuilt by Wren, 1685, and also that of S. Michael, Huggin Lane. In Silver Street, W. side, Shakespeare lodged in 1604. Cheapside Cross stood at the S. end; the Compter prison on the E., 1555-1791. Fires here in 1863, 1882, and 1887 caused damage estimated at £100,000, £1,000,000, and £240,000 respectively. On Sept. 7, 1915, bombs from a Zeppelin set some warehouses on fire. Nearly all the buildings were destroyed by air raids in 1940. The Reverie of Poor Susan, by Wordsworth, begins, At the corner of Wood Street.

Woodstock, Oxfordshire. Church of S. Mary Magdalene

Wood Swallow OR SWALLOW SHERK (Arlamus). Genus of about 17 species of birds, natives of the Indian sub-continent, Australia, and the intervening countries. Their family relationship has not been determined satisfactorily.

Wood Swallow, the masked species *W. S. Berriidge, F.Z.S.*

They have a long, pointed, and slightly curved bill with wide gape, long wings, and a short tail. They are black, blue, grey, or rufous above, and more or less white beneath.

Wood Tin. In mineralogy, a variety of cassiterite (q.v.), tin oxide. It occurs in reniform masses, having a compact fibrous internal structure showing concentric bands resembling wood.

Woodville, ELIZABETH. The queen of Edward IV of England is entered under her Christian name on p. 3029.

Woodville, RICHARD CATON (1856-1927). Anglo-American artist. Born in London, Jan. 7, 1856,

R. Caton Woodville,
Anglo-American
painter

son of a Baltimore artist, he studied at Düsseldorf. As a war artist he saw much service in the East, especially in Turkey, 1878, and Egypt, 1882, and he was a frequent and popular contributor to English illustrated journals. From 1879 he exhibited battle pictures regularly at the R.A. He published *Random Recollections*, 1913, and died Aug. 17, 1927. See *Balaclava*; *Blenheim*; *Spion Kop*.

Woodward, SIR ARTHUR SMITH (1864-1944). English geologist. He was born at Macclesfield, May 23, 1864, and educated at its grammar school and Owens College, Manchester. He entered the British Museum in 1882, was appointed assistant keeper of geology ten years later, and from 1901 to 1924 was keeper of that department, succeeding Henry Woodward—no relation. He made valuable journeys to S. America and Greece for the collection of fossils, and in 1912-14 he was associated with Charles Dawson in his discovery near Lewes of the Piltdown skull, considered by many authorities to be the earliest ancestor of modern man. This discovery was described in *The Earliest Englishman*, new ed., 1945. Woodward was knighted on his retirement in 1924, and was honoured by learned societies of Europe and America. He published *Outlines of Vertebrate Palaeontology*, 1898, and arranged the British Museum catalogue of fossil fishes, 1889-1901. Woodward died Sept. 2, 1944.

Woodward, SAMUEL PICKWORTH (1821-65). British naturalist. He was born at Norwich, Sept. 17, 1821, and in 1848 entered the service of the British Museum, where he held important positions in the department of geology and mineralogy. His *Manual of the Mollusca* was long the standard work on the subject. He died July 11, 1865.

Wood Wasp (Siricidae). Large, brilliantly coloured insect of the order Hymenoptera. It is without a waist, and the female has a long, stout, sting-like ovipositor used for boring into wood to deposit the eggs. The larvae bore and feed in wood, often causing damage. The

black and yellow *Sirex gigas* is the commonest kind in Great Britain; others are metallic blue; all are associated with conifers. Wood wasps are closely related to sawflies (Symphyta).

Woodworm. Popular name for the larvae of various longicorn and lamellicorn beetles, as *Xestobium*, etc., which feed in wood. See *Beetle*; *Longicorn*.

Woody Nightshade. For this plant, see *Nightshade*.

Wookey Hole. Cave in limestone near Wells, Somerset, England. It is 500 ft. long. In it have been found Palaeolithic implements and fossil bones of the reindeer, mammoth, woolly rhinoceros, and cave bear. Some flint instruments are probably Mousterian; bone arrow heads are of later date. Renewed exploration from 1910 proved still later occupation during late-Celtic and Romano-British times, 200 B.C.-A.D. 400.

WOOL: ITS PROPERTIES AND USES

F. V. DAVIES, H. WATSON, and V. E. YARSLLEY

An account of the sources, properties, and economic importance of wool is followed by a brief reference to a material produced synthetically which has resemblances to natural wool. Further information on wool and its use is under Carpet; Dyes and Dyestuffs; Felt; Fulling; Sheep; Tweed; Woollen; Worsted

Wool (O.E. *wull*) is the name given to the body-hair of certain ruminant quadrupeds, notably sheep, goats, and camels. By custom, the word is accepted as meaning the fleece of the domestic sheep, unless otherwise stated. Other animal hairs are of the same type, but are in general coarser and stiffer, and it is possible to arrange a series which passes by almost imperceptible stages from the finest and softest merino wool through coarser wools; mohair; cashmere; and horsehair, to the rigid bristles of the hog.

Wool, like other hairs, has a complex organized structure, with roots contained in depressions or follicles in the skin, and projecting shafts—the hairs themselves. The core of the wool fibre consists of numerous spindle-shaped cells, cemented together parallel to the length of the fibre. In coarser varieties there may be a cylindrical central canal or pith, the medulla, containing some air-spaces and the colouring-matter of dark wools. The core is entirely covered by a layer of horny scales which overlap one another like tiles on a roof, thus combining protection of the more delicate core with flexibility.

Australia is the world's biggest wool-producer, supplying fine merinos and high-quality cross-breeds; New Zealand supplies mainly high-quality cross-breeds; in both lands mixed breeding between merino and English-type sheep gives the cross-bred types. The Cape, the U.S.A., and various S. American countries are also considerable wool-growers.

Sheep are normally sheared yearly, and the fleeces form the most important source of wool, but skin-wool or "slipe" is also removed from the skins of slaughtered sheep; the slight

putrefaction which occurs in the first stages of fellmongering serving to loosen the wool roots. Lambs may be sheared in the first few months, and give very soft fine wool. The first clip from sheep is termed hogg wool; subsequent yearly clips are wether.

Wool auctions are held in the countries of origin, and the wool is sorted in the purchasing country. Wool-sorters classify raw wool by quality numbers, originally based on the finest yarn-count to which the various wools could be spun. This is not now strictly true, but the use of the system is well understood in the trade. General appearance and even smell guide the expert wool-sorter; but the essential in assigning a quality number is a highly developed sense of touch, making possible discrimination between wools varying by extremely small amounts; two common divisions of merino are 64s and 70s quality, which differ by less than 1/10,000 inch in diam. The finest wools are the merinos or botanias, of quality 60s, 64s, 70s, 80s, and 90s. Cross-breeds vary from 40s to 58s; the coarsest wools may be 32s and 28s.

Raw wool contains the salts derived from the animal's perspiration, chiefly potassium carbonate; and a fatty material called wool-grease. These two may account for about half the weight of the fleece, and are removed at some stage in the processing by washing or scouring. The wool-grease may be recovered from the scouring liquors, and on purification forms wool-fat or lanolin, used as a base for ointments and skin creams, and to prevent rust on steel or iron.

Wool is used for textiles in three ways: spun into two different and contrasting types of yarn, woollen and worsted, and consolidated

Wool. Processes in its preparation in Australia. 1. Shearing sheep by machinery. 2. When the fleece is shorn it is picked up in one piece and thrown on to the wool table. 3. Wool rolling and classing in a wool store. 4. Combing machine used for shorter-staple wools, removing short fibres, burrs, and grass seeds. 5. Warping wool at a textile factory, where fine quality serges and worsteds are produced from merino wool
Australian News and Information Bureau

into a sheet, called felt, without spinning or weaving.

Chemically, wool is the protein keratin, which also forms horns, finger-nails, etc. Its structure is complex, and it exhibits both acidic and basic properties. In addition to carbon, nitrogen, hydrogen, and oxygen, it contains sulphur, which appears to form cross-links between long chains composed of the other elements. Chemical treatments which attack this sulphur modify the properties of wool and may render it useless. (The discovery that it is possible to break sulphur cross-links and rebuild them in other ways has been utilised in "cold" permanent-waving processes for human hair.) Wool is very susceptible to alkali, which first attacks the scales and loosens them, and then breaks up the core into its separate spindle cells. Care is therefore necessary in wool-scouring to avoid damage, and in laundering wool garments

the use of strong alkali and high temperature must be avoided.

One of the chief characteristics of wool is its property of shrinking and matting together under the influence of moisture, heat, and friction. This is due largely to the scale structure of the fibres, and forms the basis of the "fulling" or "milling" process for woollens, as well as the making of felts. It also results in the shrinkage and thickening of wool socks, underwear, and other knitted goods. Processes for the treatment of wool to make it "non-shrink" have become of great importance, and attained particular success with services' socks, etc., during the Second Great War. Treatment with chlorine forms the basis of many of these processes, and in all of them the aim is to treat the wool with some chemical which attacks it, but to limit the attack to the outer part of the fibre in which the scales are set.

Felting is one of the properties which give wool made into articles its distinctive behaviour; others are that of taking up 30 p.c. of its weight of water without feeling appreciably damp, and the large amount by which wool fibres stretch before they break. One of the biggest disadvantages of wool is its liability to attack by moths, carpet beetles, and similar pests, the grubs of which utilise the wool as food during their period of growth. While clothing and small articles can be protected by wrapping in paper or close cotton fabric, the effect is purely to prevent the moths getting to the wool, and the old idea that newspaper had a particular virtue due to printer's ink is not correct. Upholstery is more difficult to protect, and once infested it is often almost impossible to get rid of the pests. Chemical treatment confers lasting mothproofing, the wool becoming actually

poisonous to the grubs. (*Consult Wool Trade in English Medieval History*, E. Power, 1941; *Wilt's Woollen Industry in 16th and 17th cents.*, G. D. Ramsay, 1943; *Wool*, S. Kershaw, 1945; *Woollen and Worsteds Raw Materials*, J. R. Hind, 1948; *Farming for Industry*, J. Whyte, 1948.)

F. V. Davies
ECONOMIC IMPORTANCE. The woolsack as the traditional seat of the lord chancellor in the house of lords is a permanent reminder of the importance of wool economically in medieval England. Wool is important still, for woollen manufacture employs nearly 200,000 people, principally in the W. Riding of Yorks; it uses imported wool to the value of £40,000,000 annually, and besides doing much to clothe the people of the U.K., furnishes exports of woollen yarn and manufactures, worth in 1947 £58,000,000, as well as a large part of the exports of clothing. Sheep-rearing and wool-production are still an important part of British agriculture, about one-sixth of the wool used in the U.K. being home-produced; it amounts to c. 50,000 tons out of a world production of 1,600,000.

Australia exports annually c. 500,000 tons of wool, New Zealand c. 150,000 tons; together, more than a third of the world total. Most goes to London or Boston, Mass.

Sheepskins are an important source of both wool and leather. They are a valuable by-product of mutton production. London is one of the chief centres for auction sales of woolled sheepskins. Wool is closely connected with scouring and dyeing, and is the basis of industries, such as carpet-making, that utilise waste products of the manufacture of woollen cloth.

B. Watson
ARTIFICIAL WOOL. A fibre having the capacity to absorb moisture in the same degree as wool is made from the ground nut. It contains up to 28 p.c. protein and 11 p.c. carbohydrate, and is produced thus: a spinnable solution is made in alkali containing 20-30 p.c. protein. This, like viscose, is matured for 10-50 hrs., to attain the required spinning viscosity, and is then forced through spinnerets into a coagulating bath of sodium sulphate and acid. The rope of filaments formed by combining those from a number of spinnerets is cut into predetermined lengths according to the textile—worsted, woollen, or cotton—in which it will be ultimately used. The filaments

are "tanned" by treatment with formaldehyde at low pH., and are then washed acid-free and dried. The resulting fibres are cream-coloured and crimped and are soft and wool-like to handle; colour can be improved by bleaching.

V. E. Yarsley
Woolacombe. Seaside resort of Devon, England. On Morte Bay, 5 m. S.W. of Ilfracombe, it has a magnificent mile-long bathing beach with firm sand and Atlantic rollers. There is also a golf course. Potter's Hill was presented to the nation at the silver jubilee of George V, 1935.

Woolcombing. Process of removing from wool all fibres of below a certain average of length, and of arranging the long fibres in parallels.

Wooler. Town of Northumberland, England. Situated 15 m. S. of Berwick-on-Tweed, beneath the Cheviot Hills, with a rly. station, it is an agricultural centre, and has sheep and cattle fairs. Pop. 1,505.

Woolf, (ADELINE) VIRGINIA (1882-1941). British writer. Daughter of Sir Leslie Stephen, and sister of Vanessa Bell, she was born in London, Jan. 25, 1882, and during her youth lived chiefly in London and Cornwall. In 1912 she married Leonard Woolf

Virginia Woolf,
British writer

(v.i.), with whom she founded the Hogarth Press in 1917. With Clive Bell, Lytton Strachey, T. S. Eliot, and other writers, she formed a literary group in Bloomsbury which attained an international reputation. Her first two novels, *The Voyage Out*, 1915, and *Night and Day*, 1919, were realistic in treatment; but with *Jacob's Room*, 1922, she discarded her early manner, and like James Joyce utilised what was called the "stream of consciousness" method. She became an important influence in giving the novel a more flexible form, and her classic prose was wedded to an original and vivid technique in which mood, atmosphere, and delicate satire predominated over narrative or pictorial description. To the *Lighthouse*, 1928; *Mrs. Dalloway*, 1929; *The Waves*, 1931, and the posthumous *Between the Acts*, 1941, show her as a novelist of subtle apprehensions and power of inspiring men-

tal excitement in imaginative minds. Orlando, 1928, reveals her preoccupation with the inexorable movement of time—a theme found in almost all her work.

Virginia Woolf had a keen and catholic critical sense, at its best in articles written for *The Times* literary supplement, many of which were collected in *The Common Reader*. Other works included *The Years*, 1935 (a return to her earlier manner); *A Room of One's Own*; *Three Guineas*; *Flush* (story of Mrs. Browning's spaniel); and a biography of Roger Fry, 1940. *The Moment* (essays) and *The Haunted House* (short stories) were published posthumously. Her body was found in the Sussex Ouse, near Lewes, on March 28, 1941, it being presumed that she had committed suicide. There are *Lives* and other studies by E. M. Forster (Rede lecture), 1942; D. Daiches, 1945; J. Bennett, 1945; D. Newton, 1946; R. L. Chambers, 1948.

Woolf, LEONARD SIDNEY (b. 1880). British writer. Born Nov. 25, 1880, he was educated at St. Paul's and Trinity College, Cambridge, and was in the Ceylon civil service during 1904-11. He was editor of *The International Review*, 1919, ran the literary columns of *The Nation*, 1923-30, and from 1931 edited *The Political Quarterly*. In 1912 he married Virginia Woolf (v.s.), with whom he founded the Hogarth Press in 1917. His books include *The Village in the Jungle*, 1913; *Socialism and Cooperation*, 1921; *Hunting the Highbrow*, 1927; *After the Deluge*, vol. 1, 1931; vol. 2, 1939.

Woolcott, ALEXANDER (1887-1943). American writer and critic. Born at Phalanx, N.J., Jan. 19, 1887, he was educated at Hamilton College and Columbia university. In 1913 he joined the *New York Times* as dramatic critic, and later worked in the same capacity for the *New York Herald* and *New York World*. Later in the New Yorker his wit found more scope. During 1933-37 he broadcast over the Columbia network under the name Towncrier. Woolcott's first book, published 1917, concerned the views of Mrs. Fiske, American actress. He had a gift for telling a story, as in a study of Irving Berlin, 1925. *Two Gentlemen and a Lady*, 1928; *While Rome Burns*, 1934. Monumentally egocentric, he was caricatured as the chief figure in the play, *The Man Who Came to*

Dinner, and on one occasion played the part himself. He died in New York, Jan. 23, 1943. A study by S. H. Adams came out in 1946.

Woollen. Type of wool yarn, and fabric made from it. Woollen yarn is not, like worsted, combed to lay the fibres parallel. The web from the card is divided into a number of narrow bands by cutters revolving on a shaft, and these are then rubbed into roughly cylindrical shape by passage between two moving leather belts. The product is spun into yarn on either the mule or a ring-frame. Woollen yarn is rough, hairy, uneven, and the fibres are tangled together in all directions. Woollen cloth is often said to be "made in finishing." The typical woollen fabric, straight from the loom, is bare, thready, and unprepossessing. In finishing, the chief processes are milling or fulling; brushing or raising; and cropping or shearing. The cloth shrinks and consolidates, and usually has a short dense "nap," hiding the individual threads. Typical woollen fabrics are melton, services' uniform cloth, overcoating, billiard cloth, and flannel.

The woollen industry is centred round Batley (Yorks), in the west of England, and S. Scotland. It utilises the coarser grades of wool, which are not suitable for worsteds; shoddy and mungo, which are reclaimed wool from clippings, rags, etc.; and blends of cotton with wool. Cheap flannels may have an all-cotton warp and a woollen weft.

Even in Roman times two contrasting types of fabric were made from wool, corresponding roughly to present-day woollens and worsteds. *See* Worsted.

Woollett, WILLIAM (1735-85). English engraver. Born at Maidstone, Aug. 15, 1735, he studied under Tinney in London, and at the St. Martin's Lane academy. Engravings after the landscapes of Richard Wilson were his first important work. Later he engraved West's Death of Wolfe, and other historical pictures. In 1775 he was appointed engraver to the king. Regarded as the master engraver of his time, a great innovator, the first to sell work outside England, he died May 23, 1785.

William Woollett,
English engraver

Woolley, SIR (CHARLES) LEONARD (b. 1880). British archaeologist. Born April 17, 1880, he

Sir Leonard Woolley,
British archaeologist

was educated at New College, Oxford, and became assistant keeper at the Ashmolean Museum in 1905. After excavating in Nubia for five years, he conducted the British Museum excavations on the Hittite site at Carchemish, 1912-14, and again after the First Great War. He unearthed the ancient Egyptian city at Tell-el-Amarna in 1921, then was director of the British Museum and Pennsylvania joint expedition to Iraq. Woolley's discoveries of supreme value were at the site of Ur (q.v.), carrying the history of Chaldean culture back to 3500 B.C. He gave a graphic account of these discoveries in *Ur: The Royal Tombs*, 1933, and other books. Important excavations were made at Al Mina, near Antioch, 1936-37, and in the Hatay before and after the Second Great War. Knighted 1935, Sir Leonard wrote *Digging Up the Past*, 1930; *Development of Sumerian Art*, 1935; *The Ziggurat and its Surroundings*, 1938.

Woolley, FRANK EDWARD (b. 1887). English professional cricketer. Born at Tonbridge, May 27, 1887, he played for Kent first in 1906. In 28 successive seasons, 1907-14 and 1919-38, Woolley exceeded 1,000 runs, a record, and put together a higher total than

Frank Woolley,
English cricketer

had been achieved by any other player still in the game when he retired in 1939. In each of eight summers he captured 100 wickets (185 in 1920). He played in 32 test matches against Australia, the last at the age of 47; and 52 consecutive tests against all countries. Notable performances were innings of 95 and 93 in one match against Australia, 1921; 305 not out, against Tasmania; an aggregate of 3,352 in 1928; and the Lawrence trophy for the fastest century in 1934. The most graceful left-handed batsman of all time and a bowler of right-hand spinners, Woolley was England's

best all-round player before the advent of W. R. Hammond. Author of *The King of Games*, 1936, he became coach at King's School, Canterbury.

Woolman, JOHN (1720-72). American preacher. He was born at Northampton, Burlington co., West Jersey, and from the age of 23 devoted his life mainly to the anti-slavery movement, becoming an itinerant Quaker preacher and supporting himself by tailoring. In 1772 he came to England to confer with the British Quakers, but died from small-pox at York, Oct. 7. He is best known by his *Journal*, an ingenious revelation of a spiritual nature. He also wrote essays. *Consult* J. W., Quaker, J. Whitney, 1943.

Woolmen. London city livery company. Founded early in the

Woolmen's Co.
arms

14th century, it had ordinances confirmed in 1587 by the lord chancellor. Sir John Crosby was a member of the company. The office is at 3, Albany Court Yard, W.1.

Woolner, THOMAS (1825-92). British sculptor and poet. Born at Hadleigh, Suffolk, Dec. 17, 1825, he studied under William Behnes, and at the R.A. schools; joined the Pre-Raphaelite Brotherhood; and contributed poems to *The Germ*. In 1857, medallion portraits of Tennyson (Trinity College, Cambridge) and Carlyle established his reputation. Woolner became A.R.A. in 1871, R.A. in 1874, professor of sculpture, 1877-79. He modelled busts or statues of most of the great men of his time, e.g. that of J. S. Mill on the Thames Embankment. He died Oct. 7, 1892.

Woolsack. In the British parliament, seat of the lord chancellor when presiding over the sittings of

Thomas Woolner,
British sculptor

The Woolsack, on which the lord
chancellor sits in the house of lords

the house of lords. At an early date a sack of wool was placed in the house as a seat, and in time this became the official seat. In the time of Henry VIII there is a reference to the chancellor and other high officials sitting upon sacks. Today the sack is a large square cushion of wool, covered with red cloth. Technically it is outside the precincts of the house, so that if the lord chancellor wishes to intervene in debate he must let someone else take his place for the moment and, stepping aside, speak as a peer to his peers. In this he has more freedom than the Speaker of the house of commons, who impartially controls debate. See Lord High Chancellor; Lords, House of.

Woolsey, THEODORE DWIGHT (1801-89). American education-

T. Dwight Woolsey,
American educationist

ist. Born in New York, Oct. 31, 1801, and educated at Yale, Philadelphia, Princeton, Leipzig, Bonn, and Berlin, he was professor of Greek at Yale during 1831-46, thereafter president till 1871. During his administration two new departments were established at Yale, the schools of science and of the fine arts. Woolsey was chairman of the American commission revising the A.V. of the Bible. He died July 1, 1889. His publications include editions of Greek plays; Introduction to the Study of International Law, 1860; Socialism and Communism, 1880; Divorce and Divorce Legislation, 1882.

Woolston, THOMAS (1670-1733). English deist. A native of Northampton, and educated at Sidney Sussex College, Cambridge, he took orders and became ecclesiastical lecturer in 1697. The study of Origen caused him to lose faith in the Bible and advocate allegorical explanation; his attacks on orthodoxy led to his being deprived of fellowship and orders. In 1729 he was convicted of blasphemy, and spent the rest of his life in prison, dying Jan. 27, 1733. He wrote The Moderator Between an Infidel and an Apostate, 1725; Defence of the Miracle of the Thundering Legion, 1726; Discourse on the Miracles of Our Saviour, 1727.

Woolton, FREDERICK JAMES MARQUIS, 1ST BARON (b. 1883). British business man and politician. A Mancunian, born Aug. 24,

Woolwich, S.E. London. Gateway in Beresford Square to the arsenal, established in the 17th cent.

1883, he was educated at Manchester grammar school and university, and was for a time research fellow in economics in the latter. In 1920 he became a director of the departmental store, Lewis's Ltd., of Liverpool, Manchester, and Birmingham, and was later chair-

Lord Woolton,
British politician

man and managing director, extending the firm's activities. Having served on several govt. committees dealing with business, Marquis, knighted in 1935, became director-general of equipment and stores to the ministry of Supply at the outbreak of the Second Great War. Raised to the peerage in 1939, Woolton was minister of Food, 1940-43, then was given the new appointment of minister of Reconstruction. Lord president of the council in Churchill's "caretaker" govt. of 1945, he was, after the general election that year, appointed chairman of the Conservative party with the task of strengthening the party organization.

Woolwich. Met. bor. of the co. of London. It is situated on the S. bank of the Thames, 9 m. below London Bridge, and is served by rly., tram, and bus. It includes the districts of Woolwich, Plumstead, and Eltham. North Woolwich, across the river, is connected by ferry and subway. In the royal dockyard, used since

1869 for military stores, the Great Harry was launched in 1515. The royal arsenal, dating from the 17th cent., occupies an area 3½ m. long by 1 m. broad, and includes a gun factory, torpedo factory, laboratory, and carriage, army ordnance, and naval ordnance departments. Munitions were turned out during both Great Wars, and normally commercial articles are also made.

At Woolwich was formerly the Royal Military Academy, founded 1741, where

officers of the artillery and engineering branches of the British army received training. This was closed in 1939, and in 1946 was amalgamated with the Royal Military College to form the present R.M.A., Sandhurst.

In the churchyard of the parish church of S. Mary Magdalene, 1740, Henry Maudslay, the engineer, and Tom Cribb, the pugilist, were buried. Gordon and Sims Reeves were natives. There are handsome municipal buildings, public library, and several theatres. Parks and open spaces cover upwards of 400 acres. Eltham Hall, famous for royal banquets, still exists, and the Tudor Barn at Well Hall has associations with More. In the 20th cent. Woolwich witnessed an enormous industrial expansion, as a result of which it was one of the most severely bombed boroughs in both Great Wars. Two M.P.s are elected. Pop. est. 140,000.

Woolworth. Name of a family of American business men. Frank Winfield Woolworth (1852-1919) was born near Rodman, N.Y., April 13, 1852, and at 27 invested his whole capital of some £60 in a store in Utica devoted to articles retailed at the "fixed"

F. W. Woolworth,
American business man

prices of 10 and 20 cents (equivalent to English 3d. and 6d.). His brother, Charles Sumner Woolworth (1856-1947), born Aug. 1, 1856, helped him, and in 1880 opened independently the second of the Woolworth stores at Scranton, Pa. The brothers engaged in friendly rivalry, running individual

Woolwich arms

chains of stores. In 1912 they joined forces and the business spread rapidly in the U.S.A. and Canada, and then to Great Britain—the most successful of a number of fixed price enterprises. F. W. Woolworth died April 7, 1919, leaving about £9,000,000, and C. S. Woolworth became chairman of the co., which at that time controlled some 800 stores in the U.S.A. and Canada and 60 in Great Britain. By 1934 there were nearly 2,000 stores in the U.S.A. and Canada and about 600 in Great Britain. The mammoth Woolworth Building, for long Broadway's highest sky-scraper, was h.q. of the enterprise. C. S. Woolworth helped many worthy causes in the U.S.A., presenting e.g. £100,000 to provide a Y.M.C.A. dormitory in Scranton. He died Jan. 7, 1947. By that date there were in Great Britain 756 stores open, and 13 others had been destroyed in the Second Great War. Changes in economic conditions had forced the abandonment of the fixed price. Much of F. W. Woolworth's fortune went to his grand-daughter Barbara Hutton.

Woomera Rocket Range. Rocket-proving ground in Central Australia. It was established in 1946 and is operated in conjunction with the rocket research centre at Salisbury, near Adelaide. The range runs from Woomera, a hamlet 240 m. N.W. of Melbourne, across 1,200 m. of desert towards the N.W. coast, and lies in an area of 3,000 sq. m. to which entrance is forbidden. By 1943 plans had been made to extend this range across 1,500 m. of the Indian Ocean to Christmas Island. A special township and airfield were built at Woomera, and a rly. laid from Melbourne at a cost of £1,000,000. Missiles are made in Great Britain and assembled at Salisbury. Throughout the missiles' flight across the range, their course is followed on a chain of radar observation posts. See Rocket.

Woonsocket. City of Rhode Island, U.S.A., in Providence co. It stands on Blackstone river, 15 m. N.N.W. of Providence, and is served by the New York, New Haven, and Hartford rly. The place was settled in 1667, incorporated after 200 years, and became a city in 1888. French is the prevailing language, for most of the workers came from Quebec to engage in spinning wool, advancing Woonsocket eventually to first place in wool manufacture in the U.S.A. Pop. 49,303.

Wooster. City of Ohio, U.S.A., the co. seat of Wayne co. It is 53 m. S.S.W. of Cleveland and is served by the Baltimore and Ohio, and the Pennsylvania rlys. It is the seat of a Presbyterian university. An agricultural experimental station farms 3,000 acres and supervises forests. Oil and natural gas provide industries, and the city has the biggest paint-brush factory in the U.S.A. Founded in 1808, Wooster was incorporated in 1817 and became a city in 1869. Pop. 11,543.

Wootton, FRANK (1893-1940). British jockey and trainer. Born in Australia, Dec. 14, 1893, he rode his first winner, Retrieve, at Folkestone, Aug. 23, 1906. In each season from 1909 to 1912 he headed the list of winning jockeys. His successes included the Oaks, 1909, and the St. Leger, 1910. After this he put on weight rapidly, and by 1914 had relinquished the occupation of jockey for that of trainer, eventually taking over his father's establishment at Epsom. He died April 6, 1940.

Worcester. The cathedral, from the right bank of the Severn. It dates from the 13th century

Worcester. Name of three British training ships. The second and best known was launched in 1840, as the Frederick William; a 74-gun ship of the line, she displaced 2,300 tons on a length of 214 ft. and a beam of 60 ft., and was built of oak. She served with the Royal Navy until transferred to coastguard duties in 1845. In 1876 the Admiralty lent her to the Thames nautical training college for merchant navy officers, her name was changed to Worcester, and she was moored off Greenhithe. She continued as a training ship until the Second Great War, when she was requisitioned by the Admiralty as h.q. of the Greenhithe

section of the London auxiliary patrol. In 1945 she was condemned to be scrapped. Moved to Grays, she sank Aug. 29, 1948. She was replaced at Greenhithe by the former Exmouth (*q.v.*), renamed Worcester.

Worcester. County borough, city, and county town of Worcestershire, England. On the left bank of the Severn, and on main railway

Worcester arms

lines, 22 m. S.W. of Birmingham, the city has been the seat of a bishop since 680. On the river bank stands the cruciform cathedral of Christ and S. Mary the Virgin. Dating from the 13th century and extensively restored 1854-74, this has a fine central tower, 196 ft. in height, completed in 1374. The transepts are Norman and Perpendicular, and beyond the

crossing is a screen, by Sir Gilbert Scott, which cuts off the chancel. This and the lady chapel beyond contain carved 14th century stalls. Under the choir and aisles is a fine crypt, built by S. Wulfstan in 1084. The tombs include those of King John and Arthur, son of Henry VII. The old refectory forms part of the King's school.

Near the cathedral is Edgar Tower, all that remains of the castle and now a repository of deeds. The guildhall contains interesting civic memorials. Among many ancient dwellings is King Charles's House,

where Charles II is said to have hidden after the battle of 1651. Gloves are manufactured, and there is trade in hops, also engineering works, boot factories, and iron foundries. The bor. constituency includes Droitwich. On Worcester cricket ground touring teams usually open their season. This was "the faithful city" to the Stuarts. Market days, Mon., Wed., and Sat. Pop. est. 61,350. Consult County Town, a symposium, 1946.

Worcester. Second largest city of Massachusetts, U.S.A., and a co. seat of Worcester co. It stands on the Blackstone river, 45 m. W. of Boston, and is served by the New York, New Haven, and Hartford

ry, among others. Here is Clark university, founded 1889. Worcester leads the nation in output of textile looms and vitrified grinding wheels. Settled in 1712, it was incorporated in 1722, and became a city in 1848. Pop. 193,694.

Worcester, BATTLE OF. Fought between the English and the Scots, Sept. 3, 1651. After his coronation at Scone, Charles II left Stirling on July 31 for England, where he hoped for further support, and marching through Lancs, entered Worcester on Aug. 22. At Warwick Cromwell linked up his main army with two detachments and advanced to Evesham. The main body of the royal army was outside Worcester on the other side of the Severn, so Cromwell decided to assail both city and army at once. A bridge was made to take the troops across the Severn, and a detachment under Lambert and Fleetwood opened the battle. The Scots, forced back into Worcester, rallied, but Cromwell with fresh troops forced his way into the city, whereupon the Scottish foot laid down their arms, while the horse made their way out of the city. The numbers engaged are estimated at English, 28,000; Scots, 16,000. The well-known incident of Charles hiding in the Boscobel oak occurred after this battle.

Worcester, EDWARD SOMERSET, 2ND MARQUESS OF (1601-67). English nobleman and inventor. Son of the 1st marquess, he early took an interest in experimental mechanics and in mathematics, though his position brought him into political prominence and interfered with work. During the Civil War, having garrisoned Raglan Castle for Charles I and been made earl of Glamorgan in 1644, he raised several regiments, and was

sent to Ireland in 1645 to treat secretly with the Roman Catholics for troops to fight in England. He succeeded to the peerage in 1646, fled to France in 1648, and after his return in 1652

was two years in prison. He died April 3, 1667. Worcester's chief claim to fame is his experiments suggesting that steam power was possible. *Consult* Life, Times, and Scientific Labours, H. Dircks, 1865.

Worcester China. Porcelain was produced in the factory established at Worcester, 1751. The

Worcestershire. Map of the midland county of England, famous for its orchards

works were founded by John Dale, a scientific chemist and a good painter. Soft paste porcelain mixed with steatite was used. Early pieces include mugs with portraits printed in black, purple, and blue; tea services with transfer prints; decorative pieces with embossed flowers and medallions; and painted Chinese landscapes. *See* Chinaware colour plate.

Worcester College, College of the university of Oxford. It was founded in 1714 by Sir Thomas Cookes, a Worcestershire baronet, in buildings formerly occupied by Gloucester Hall, founded in 1283 for students of the Benedictine order, and dissolved at the Reformation. The buildings, some of which are very old, are in Walton Street, remote from the

Worcester College arms

The gardens, among the most beautiful in Oxford, contain a lake. The head is the provost. De Quincey was a member, and Thomas Walsingham, Sir Kenelm Digby, and Sir R. Lovelace studied at Gloucester Hall. *See* Oxford.

Worcestershire. County of England. In the west midlands, it has an area of 699½ sq. m. Much of the surface is hilly. On the Herefordshire border the Malvern Hills rise to 1,400 ft.; in the S.E. is Bredon Hill, a spur of the Cotswolds; and in the N. and N.E. are the Clent Hills and Lickey Hills. The Severn traverses the entire length of the county from N. to S. and its tributary, the Avon, waters the S.E. portion. Other rivers are the Stour and Teme. The soil is highly

fertile, some of the valleys especially so. A large area is under orchards, plums, apples, and pears being extensively grown. Hops are cultivated, also wheat, oats, and potatoes, and there are many market gardens.

The manufacturing district in the N. around Stourport and Kidderminster forms part of the Black Country. At Droitwich are brine springs, while Malvern is a holiday centre. Main rlys. and canals serve the co. Worcester is the county town. Other places are Dudley, Stourbridge, Bewdley, Bromsgrove, Evesham, Pershore. There are three co. and three bor. constituencies. Pop. 420,056.

LITERARY ASSOCIATIONS, ETC. One of the old chroniclers was Florence of Worcester, who died in

Worcestershire arms

Worcester College, Oxford. Modern part of the college

1118. Layamon, author of *Brut*, was a priest of Areley Church, and Langland, author of *Piers Plowman*, was associated with Worcester. Samuel Butler, author of *Hudibras*, was born at Strensham; Richard Baxter, who wrote *The Saints' Everlasting Rest*, lived at Kidderminster, where there is a monument to him. The poets Shenstone and Calverley were Worcestershire men. The 1st Earl Baldwin was a native of Bewdley, and F. Brett Young of Halesowen. Broadheath was the birthplace of Elgar. *Consult* *Historic Worcestershire*, W. S. Brasington, 1893; *Victoria History*, 3 vols., ed. W. Page, 1913.

Worcestershire Regiment. Unit of the British army, formed in 1881 by an amalgamation of the

Worcestershire Regiment badge

29th and 36th Foot. Raised in 1694, the 29th won its first battle honour under Marlborough at Ramillies in 1706. In 1745 it was at the disastrous action of Fontenoy. The 36th was raised in Ireland in 1701, and first saw action in the Jacobite rebellion of 1715. After some years in the West Indies it returned, and fought in the second Jacobite rebellion of 1745. Again drafted to the West Indies, it earned the battle honours: Guadeloupe, 1759; Quebec, 1759; Martinique, 1762. A detachment of the 29th served with Howe's fleet on the Glorious First of June, 1794, for which the regt. was granted the naval crown on its badge.

Both regts. served throughout the American War of Independence, and later moved to Egypt, fighting at the Pyramids, 1801. They went with Wellington throughout the Peninsular War, earning particular distinction at Talavera and Albuera. In 1812 the 36th went to Canada, but the 29th was at Waterloo. Three honours were gained by the 36th in the Sikh War of 1845-46, and in the Crimean War the 29th earned the honours Alma, Inkerman, and Sevastopol. Both regts. served throughout the Indian Mutiny. As the 1st and 2nd bns. of the Worcestershire Regiment they were at the defence of Ladysmith, relief of Kimberley, and battle of Paardeberg. Twenty-four battalions were raised for the First Great War and gained the honours: Mons; Ypres, 1914, '15, '17; Somme, 1916, '18; Lys; Selle; Vittorio Veneto; Dorian,

1917; Sari Bair; Bagdad. In the Second Great War, battalions fought in France, 1940; N. Africa; Italy; Burma; N.W. Europe. Regimental depot is at Worcester.

Worde, WYNKYN DE (d. 1534). English printer, who came from Wörth, Alsace. His real name appears to have been Jan van Wynkyn. He is said to have assisted Caxton at Bruges, and to have accompanied him to England, where he took out letters of naturalisation in 1496. He took over Caxton's business at Westminster in 1491, set up business at the sign of *The Sunne in Fleet Street*, 1500, and removed to *St. Paul's Churchyard*, 1509. Among the 600-700 books, pamphlets, and new editions issued by him was an English version of the *De Proprietatibus Rerum* of Bartholomeus Anglicus, c. 1496, the first book printed on paper made in England. *Consult* *Early English Printing*, E. Gordon Duff, 1896.

Wynkyn de Worde, English printer

From an old print

Charles Wordsworth, British prelate

became in 1835 a master at Winchester. In 1846 Wordsworth, partly owing to Gladstone's influence, went to Trinity College, Glenalmond, as its first warden. In 1852 he was chosen bishop of St. Andrews, and he lived until Dec. 5, 1892. A reviser of the N.T., Wordsworth was famous as a classical scholar, and in early life as an athlete.

Wordsworth, CHRISTOPHER (1807-85). British prelate. Born in London, Oct. 30, 1807, he was a brother of Charles Wordsworth and a nephew of the poet. Educated at Winchester and Trinity College, Cambridge, he graduated as senior classic, was elected fellow of Trinity, and was ordained. He was also famous as an athlete. Wordsworth was headmaster of

Harrow, 1836-44; then canon of Westminster; and from 1869 bishop of Lincoln. He died March 20, 1885. A notable scholar, he wrote many hymns, e.g. *Gracious Spirit, Holy Ghost*; *Hark, the sound of holy voices*.

Christopher Wordsworth, British prelate

Wordsworth, DOROTHY (1771-1855). British author. Born on Christmas day, 1771, she was the only sister of William Wordsworth, for whom she kept house almost continuously from their first settling in Dorset in 1795. She was

Dorothy Wordsworth, British author

a devoted companion and great inspiration, but is well worth attention as an author herself. Her journals of tours in the Lake District and Scotland are full of simple but picturesque appraisal. An invalid from 1829, she died at Grasmere, Jan. 25, 1855. *Consult* *Lives*, C. M. Maclean, 1932; *E. de Selincourt*, 1933; *Journals*, ed. W. Knight, 1924; ed. E. de Selincourt, 1942.

Wordsworth, JOHN (1843-1911). British prelate. Born at Harrow, Sept. 21, 1843, a son of the hymn writer, Christopher Wordsworth, he was educated at Winchester and New College, Oxford. In 1867 he was ordained, remaining until 1885 in Oxford, except for a year when he was a master at Wellington. In 1883 he was made Oriel professor of the interpretation of Holy Scripture. For 26 years bishop of Salisbury, he died there Aug. 16, 1911. Famed as a Latin scholar, Wordsworth wrote copiously on the history of the Bible and the Church.

Wordsworth, WILLIAM (1770-1850). British poet. He was born at Cockermouth, Cumberland, April 7, 1770, the son of a land agent, and was educated at the Hawkshead grammar school and S. John's College, Cambridge. In

To face page 8616

1790 he made a walking tour on the Continent, and next year his enthusiasm for the revolutionary cause prompted him to return to France, where he spent 13 months, and had an illegitimate daughter by Annette Vallon. He has given a full account of his connexion with the Revolution, and of other formative influences, in his autobiographical poem *The Prelude*. He opened his career as a poet in 1793 with *An Evening Walk* and *Descriptive Sketches*. In 1795 he settled with his sister Dorothy at Racedown, Dorset, whence after two years they moved to Somerset.

Then came the *Lyrical Ballads*, 1798, produced in conjunction with Coleridge, whose part in the joint enterprise was to show how romance could be humanised by its union with psychological truth, while Wordsworth undertook to demonstrate the poetic possibilities of subjects taken from common life. After a visit to Germany, Wordsworth in 1799 moved to Grasmere, Westmorland; in 1802 he married Mary Hutchinson; and, after three years at Allan Bank, 1808-11, he took up his residence in 1813 at Rydal Mount, his home for the rest of his life.

In 1800 he had published a second edition of *Lyrical Ballads*, with a preface in which he attacked the artificial diction of the 18th century poets, and enforced the doctrine that the richest source of poetic material is to be found in humble and rustic life. This was followed in 1807 by two volumes containing, in such poems as the *Ode to Duty* and the *Ode on the Intimations of Immortality*, some of his finest work; in 1814 by a long philosophical poem, *The Excursion*; and in 1815 by a romantic narrative in verse, *The White Doe of Rylstone*. But though he continued to write industriously, most of his really important work was now done. During 1813-42 he was distributor of stamps for Westmorland; then he was given a civil list pension, and in 1843 he succeeded Southey as laureate. He died April 23, 1850.

Value of Wordsworth's Work

Despite his marked limitations—diffuseness, pedantry, lack of humour are obvious in his writing—and the vast amount of perishable matter in his too voluminous production, Wordsworth's place among the greatest English poets is secure. Among his several hundred sonnets, some of the noblest in our language survive. He justified his famous remark that poetry is "emotion recollected in tran-

quillity." From first to last he held consistently to his conception of the poet's mission: "every great poet is a teacher," he declared; and if the didactic purpose is often too obtrusive in his verse, much of his greatness lies, as Matthew Arnold said, in his noble and profound application of ideas to life. His poetry of nature, apart from its wonderful fidelity, is specially characterised by its deeply religious quality; "the goodly uni-

William Wordsworth
After H. W. Pickersgill

verse" is for him the incarnation of the Divine Spirit, and in communion through nature with this Indwelling Soul of all things, he finds consolation and spiritual strength. In his interpretation of human life he fixes his attention steadily upon the supremacy of the moral law and the sanctities of common life, seeking for "present good in life's familiar face."

Bibliography. Poetical Works, including *Life*, 11 vols., ed. W. Knight, 1882-89; *Lives*, F. W. H. Myers, 1881; W. Raleigh, 1903; W. and His Poetry, W. H. Hudson, 1914; W. in a New Light, E. Legouis, 1923; Wordsworth, C. H. Herford, 1930; *The Lost Leader*, H. I. Fausset, 1933; *The Later Wordsworth*, E. C. Batho, 1934; W.'s Pocket Notebook, ed. G. H. Healy, 1943; W.'s *View of Nature*, N. Lacey, 1948.

Work. Term used in physics. When a body is displaced by a force acting on it, work is said to be done on the body, and the measure of that work is the product of the force and the distance the body is moved in the direction of the force. Power is the rate of doing work. Units of work are expressed in foot pounds, foot tons, etc., in

the foot pound system; e.g., if a man carries 100 lb. up a ladder 40 ft. high he does 4,000 foot pounds of work. In the foot-pound-second system, the unit is the poundal; in the C.G.S. system, it is the erg, i.e. the work done by a force of 1 dyne acting through 1 cm. See *Horse Power*.

Worker. Name given to those members of each species of social insects which carry out the care of the brood, nest building, and often the defence of the colony. They are always sterile, non-reproductive individuals: abortive females in ants, bees, and wasps, while in termites they are of both sexes.

Workers' Educational Association. Voluntary organization for adult education, founded in 1903 by Albert Mansbridge (*q.v.*), to provide facilities for the further education of working people, in cooperation with universities and other bodies. The W.E.A. has affiliations with more than 2,000 organizations, including the T.U.C., trades councils, cooperative societies, university bodies, local education authorities, and teachers' associations. It is unsectarian, and has no party politics. It has worked closely with the extramural depts. of universities in developing university extension courses in psychology, economics, and other branches of sociology, natural science, literature, art, etc. The W.E.A. has full time local or regional organizing tutors, but most of its teachers are part time lecturers, many of them university or grammar school teachers. Its address is 384, St. George's Drive, London, S.W.1.

Workers' Travel Association. Body founded in 1921 to work in close relation with the British Labour party and co-operative movement. It specialises in arranging cheap holidays for working-class families on the Continent, and maintains fourteen guest houses in the U.K. Registered among industrial and provident societies in 1924, it has a capital of £100,000 in £1 shares, not marketable but transferable or withdrawable. No individual may hold more than 200 shares. The W.T.A. has an average turnover of £500,000 and 60,000 bookings annually. The head office is at Eccleston Court, Gillingham Street, London, S.W.1.

Workhouse. Building defined under the Poor Law Act, 1930, as a house in which poor persons were lodged or maintained or in which they received poor relief.

Originally, as the name implies, able-bodied paupers were housed in workhouses in return for the performance of given work. The Poor Law Act was repealed by the National Assistance Act, 1948. See Poor Law.

Working Party. Any group of people who undertake or are appointed to carry out a piece of social activity, e.g. the preparation of a bazaar. The term was applied specially in 1945 by Sir S. Cripps, as president of the board of trade, to denote committees appointed to inquire into and report on various industries. These working parties comprised representatives of employers and workers, together with others not directly engaged in the industry, with a chairman distinguished in some activity other than the industry. They were set up in respect of cotton, pottery, furniture, hosiery, boots and shoes, linoleum, clothing, carpets, jute, wool, china clay, jewelry and silverware, cutlery, lace, domestic glassware, milk. Inquiries brought to light shortcomings in equipment, organization, and methods of certain industries, as well as some outstanding achievements. Experience of their usefulness led to the Industrial Organization and Development Act, 1947, providing for the establishment of development councils with compulsory powers to raise the efficiency of individual industries. The cotton board was the earliest to operate of such councils.

Workington. Bor., seaport, and market town, giving its name to a co. constituency, of Cumberland, England.

Workington arms

At the mouth of the Derwent, 34 m. S.W. of Carlisle, it is served by rlys. and has a harbour. The chief industries are iron working and coal mining, the mines extending below the sea. There are shipbuilding yards, steel works, engineering works, other light industries, and some fishing. Workington Hall is interesting as having received Mary Queen of Scots on her flight from Scotland. Pop. 28,030.

Workman, WILLIAM HUNTER (1847-1937). American explorer. Born at Worcester, Mass., Feb. 16, 1847, he took his degree at Yale and Harvard, afterwards studying at Vienna, Heidelberg, and Munich, and practised medicine in his native town, 1874-89.

William Workman, American explorer

Mt. Bullock Workman, 19,450 ft. and Mt. Kosa Gunga, 21,000 ft. Five years later they made other ascents, Workman climbing 23,394 ft. and his wife attaining the record alt. for a woman. Together they mapped W. Himalayan glaciers in 1911 and next

year explored the watershed between the Indus and Turkistan. They collaborated in books of travel. Workman died Oct. 10, 1937.

Workmen's Compensation. System in force in English law until 1946 for the payment of compensation to persons injured at work or to the dependants of persons killed. As the doctrine of common employment, which in effect prevented a man from recovering damages from an employer when injured by the negligence of a fellow employee, had caused great hardship, the Employers' Liability Act, 1880, prevented the employer from relying on the defence of common employment in certain cases; e.g. when the person by whose negligence the injury occurred was in a position of authority. Compensation recoverable was, however, limited to three years' wages.

The Workmen's Compensation Act, 1897, introduced the entirely new principle that a workman was entitled to compensation even though injury was not due to negligence at all, if it arose from an accident in the course of employment. This was improved upon by Acts of 1906 and 1925 and other amending statutes. Yet there were still serious defects. In the first place, although the Acts were expressly designed to make litigation unnecessary, they failed in this; a series of law reports confined to workmen's compensation cases of special legal importance ultimately included some 3,000 cases in nearly 50 volumes. Again, compensation was by weekly

He then travelled with his wife, Fanny Bullock Workman (1859-1925) in Africa and India. In 1899 they made several ascents in the Himalayas, including

Fanny Workman, American explorer

payments (or a lump sum in case of death) which were related to earnings during work and in no way to needs, until slight amendments were made during the Second Great War. Weekly compensation was in general limited to 50 p.c. of earnings.

In 1942 the Beveridge Report recommended the abolition of the whole system and the substitution of a new one as part of the scheme of national insurance. In 1946 effect was given to this recommendation, the Workmen's Compensation Acts being repealed by the National Insurance (Industrial Injuries) Act. Consult Workmen's Compensation, Sir A. Wilson and H. Levy, 2 vols., 1939-41.

Work Projects Administration. One of the agencies of F. D. Roosevelt's New Deal in the U.S.A. Created in 1935, originally under the name of Works Progress Administration, in 1939 it was combined with four other concerns to form the Federal Works Agency. Its object was to provide useful occupations on public projects for the unemployed; e.g. on highways, bridges, public buildings, water supply. The W.P.A. did much to afford training in manual occupations, and to increase educational and recreational facilities. A minor service was sewing garments and making household goods.

Works, MINISTRY OF. British govt. department. It was formed in 1832 as the office of works to take charge of all royal palaces and parks, public offices, and other buildings belonging to the nation as a whole. The office remained under the control of a first commissioner until in 1940 it was raised to the status of a ministry as the ministry of Works and Buildings. It was given the additional wartime functions of erecting buildings required by other govt. depts.; arranging for non-specialised buildings for the fighting services and ministry of Supply; licensing private building and assessing priority of claims for air raid damage; and consulting with the appropriate depts. upon post-war reconstruction. The first minister was Sir John (later Lord) Reith. In 1943 the functions in post-war reconstruction of what had meanwhile been renamed the ministry of Works and Planning were taken over by the ministry of Town and Country Planning (*q.v.*) created for that purpose, the non-planning activities being retained

by the old dept. under the title ministry of Works.

Works Council. Committee representative of the management and employees of a factory, set up to provide a recognized means of consultation between them. The range of activity of such a council is normally stated precisely in its constitution; ordinarily this excludes wages and matters of agreement between a trade union and an employers' association. In 1917 the Whitley committee on relations between employers and employed recommended the establishment in each industry of national and district joint councils, and works councils. Opinions concerning the utility of the last-named vary. See Whitley Council.

Workshop. Industrial and market town and borough of Notts, England. It is on the borders of Sherwood Forest, 15 m. E.S.E. of Sheffield, and is served by rlys. and canal. Historically the centre of interest is the priory, founded here about 1100, of which survive the nave of the church of S. Cuthbert, a splendid piece of Norman work, the ruins of the lady chapel, and a 14th century gatehouse. The present manor house is modern, having replaced the one in which Mary Queen of Scots was imprisoned. The town is a mining and agricultural centre, being concerned also with timber and glass industries. Pop. 29,300.

World, THE. Word used as an alternative for earth. Usually the term has political rather than physiographical significance; or at least implies a reference to the human aspects of the habitable globe, as in the figurative phrase, the world of letters. Physically the earth is a planet, while from the historical or ecological standpoint the world is the home of man, and sum of his achievement. See Airways colour plate; British Commonwealth colour plate; Earth; Geography; Maps; Population; Rainfall colour plate; Religion colour plate; Solar System; also World colour map.

World Council of Churches. International religious organization. It was constituted Aug., 1948, at Amsterdam, when delegates from nearly 150 member-churches, representing every main Christian tradition except the Roman Catholic, met for the first assembly. Throughout a generation inter-church consultation and cooperation had been growing in volume, scope, and importance

as the accompanying table shows.

The four movements named in the table prepared the way for the

World's Evangelical Alliance. Founded 1846, to enable Christians of all nations to realize in them-

World Council, but its official beginning was delayed by the Second Great War. Nevertheless, though only in process of formation, it was already engaged in notable service 1938-48. The assembly meets normally every five years, with a small central committee meeting annually, and a permanent secretarial staff at its h.q., 17, Route de Malagnou, Geneva. The council has undertaken work in the following spheres: *Faith and Order* (exploration of common ground and understanding of distinctive emphases in the various Christian traditions); *Study Department* (the sharing of thought, including that on subjects to be taken up by the next assembly); *Reconstruction, Inter-Church Aid, Refugees* (post-war relief work); *Youth* (correlation of the churches' youth work, including preparation for periodic world conferences of youth); *International Affairs* (a permanent commission, jointly with the International Missionary Council, to give expert advice to the churches).

World Digest. Monthly periodical founded, and edited until his death in 1949, by Sir John Hamerton; published in London by The Amalgamated Press. The first cheaply priced British digest, comprising extracts from the best new books and condensations of British and foreign magazine articles, it first appeared with date May, 1939.

World Food Board. Proposed subsidiary body of the U.N. Food and Agriculture Organization. Sir John Boyd Orr (Lord Boyd-Orr) proposed its creation in 1946; its chief functions were to be to stabilise world prices for agricultural products, and to create a food reserve to meet emergencies. The F.A.O. rejected this proposal, and instead set up a permanent council of the F.A.O. with advisory functions. It met for the first time in Washington, Nov. 4-11, 1947.

selves and to manifest to others the vital union which unites all believers in Jesus Christ. Incorporated 1912, the alliance is the permanent centre of international appeal on behalf of persecuted Christians and religious liberty. Freedom from political attachments qualifies it to protest to any government and secures for it a respectful hearing. The programme of practical work is devotional, missionary, and evangelistic. The temporary headquarters are at 30, Bedford Place, London, W.C.1.

World Wars. The wars of 1914-18 and 1939-45 are sometimes styled First World War and Second World War, or (especially in the U.S.A.) World War I and World War II. Throughout this encyclopedia they are called the First Great War and Second Great War. See First Great War; Second Great War.

Worm. In popular usage, word denoting any long, slender animal, whether reptile (slow-worm), mollusc (shipworm), insect (glow-worm, silkworm, wireworm, blood-worm), entozoan (tapeworm, round-worm), or earthworm. In scientific zoology the word is used to cover a heterogeneous assemblage of orders. See Ascaris; Bladder Worm; Cestodes; Earthworm; Filariasis; Fluke; Leech; Lob Worm; Nematelminthes; Nemereta; Planarians; Platyhelminthes; Serpula; Trematodes; Trichina; Wireworm.

Worm Gearing. A worm is a cylindrical rod in which is formed a deeply cut and strong thread for engagement with a corresponding thread in a worm wheel. One to four threads may traverse the worm. The latter, being driven turns the wheel relatively slowly, tooth by tooth, as the worm rotates, a common application being for reduction of speed, in which a ratio of as much as 100:1 is feasible. Another application is to secure a big mechanical advantage in order to overcome a

Worms, Germany. Cathedral of SS. Peter and Paul, dating mainly from the 11th-12th centuries, from the south-west

high resistance in the driven member. For intermittent use also worm drive is convenient. Applications are in motor car transmission; crane drives; reduction of speed in electric motors; in devices for opening and shutting skylights; and in driving the governor of spring motors (e.g. for gramophones). If the threads of the worm cross the wheel at an acute angle, the gears are self-locking, i.e. the worm can drive the wheel but the wheel cannot drive the worm. To obtain reversibility the angle must be greater than 45° . See Gear.

Worms. Ancient city and river port of W. Germany, in the *Land* of Rhineland-Palatinate, on the left bank of the Rhine, 10 m. below Mannheim. Though severely damaged during the Second Great War when it was captured March 20, 1945, by the U.S. 4th armoured div., it retained its chief glory, the cathedral of SS. Peter and Paul, built 1000-1025, and reconstructed from 1181; this is a remarkable Romanesque building, with an altar by B. Neumann and fine Gothic sculptures. Another S. Paul's church (1016-1250), S. Andrew's (11th-13th cent.), Our Lady's (15th cent.), S. Martin's (1261), and other buildings tell of Worms's history. His famous appearance at the diet of 1521 is commemorated by a huge Luther monument. The modern town had engineering, furniture, leather, chemical, sugar, and food preserving industries, and was an important rly. junction and river port, and a co. seat. Pop. 49,000.

History goes back to the Celtic settlement Barbetomagus. From

the 5th century this was the capital of the Burgundians and about a century later the only *civitas publica* of the Frankish kingdom. A bishopric from Roman times, it received imperial privileges about 1100 and those of a free city in the 13th century. More than 100 diets were held here; that of 1521 outlawed Luther and his followers. Worms lost importance after being sacked and burned by the French in 1689; its bishopric ended in 1797, when it fell to France. It came to Hesse in 1815, and was occupied by the French 1918-30. After the surrender of Germany in the Second Great War it lay in the French zone of occupation.

Wormwood (*Artemisia absinthium*). Aromatic perennial herb of the family Compositae. A native of Europe, Asia, N. Africa, and N. America, it has grooved and angled stems, about three feet high, and silky leaves cut into many oblong segments. The drooping yellow flower-heads are in leafy sprays. See Absinthe.

Wormwood. Spray of flower-heads and leaf of the aromatic plant

Wormwood Scrubs. District of W. London, lying N. of Shepherd's Bush (q.v.) in Hammer-smith borough. It gives its name to an open space used as a recreation ground, 180 acres, and adjoining is Little Wormwood Scrubs, 22 acres. Here is a large prison.

Worsborough. Market town and urban dist. of the W. Riding of Yorks, England. Situated 3 m. S. of Barnsley on the rly., and also served by a canal, it is a coal-mining centre. Pop. 13,850.

Worship of the Dead. Widely observed religious cult. It is prominent in most early religions. The dead, whose activity is inferred from dreams, etc., are dreaded rather than loved by primitive races. To placate their ghosts, offerings are laid on their tombs, which thus become altars. See Ancestor-Worship; Animism; Apotheosis; Confucianism; Euhemerus; Hero; Mythology; Saint; Shintoism. Consult *Worship of the Dead*, J. Garnier, 1904.

Worsley. Urban district of Lancs, England, which includes the dists. of Little Hulton, Boothstown, Walkden, and Worsley. It is 7 m. N.W. of Manchester, on main rly. lines. Coal mining is the chief industry. Pop. 27,200.

Worsted. Yarn from wool which has been combed to remove the short fibres and leave the long ones laid parallel. This parallelism is retained in the subsequent spinning processes, giving a smooth, even, lustrous yarn which is almost the exact opposite of woollen yarn. The difference is due to the method of spinning rather than to use of different raw wool, but it is customary to use the merinos or "botanies" and the finer cross-breeds for worsteds, reserving the coarser wools for woollens.

Worsted is used for the best botany suitings and dress cloths, as well as finer cloths. Special types go into underwear and hosiery. Though originally called after Worstead (Norfolk), most of the world's worsted spinning has for years been carried on in the region around Bradford, Yorks. See Spinning; Wool. Consult *The Worsted Industry*, J. Dumville and S. Kershaw, 1947.

Wörth. Village of Bas-Rhin dept., France. It is in Alsace, 12 m. S.W. of Wissembourg, and is famous as the scene of a French defeat, Aug. 6, 1870, when the French lost 8,000 men; the attacking Germans perhaps somewhat more. The French call the battle Reichshofen, after another

village on the battlefield. In German occupation from 1940, Wörth was reached by the U.S. 7th army March 18, 1945. *Pron.* Vert.

Worth, CHARLES FREDERICK (1825-95). British dress designer, born at Bourne, Lincs. He was apprenticed to Swan & Edgar, London, and then served in a wholesale silk house in Paris, 1846-58. In partnership with a Swede, he set up in business as a dress-maker and ladies' tailor, and, his genius for design having attracted notice of the Empress Eugénie, rapidly achieved fortune and became the dictator of Paris fashion. He died March 10, 1895.

Worthing. Municipal borough and holiday resort of Sussex, England. Situated 61 m. S. of London, it has four rly. stations. Attractions include an extensive marine parade, a pier, and good bathing facilities. The buildings

Worthing arms include a town hall, several churches, a free library and museum, etc. Ecclesiastically the oldest portion of Worthing is Broadwater, which has the fine church of S. Mary, Transitional Norman in style; in the churchyard lie the naturalists

1918; minister of Pensions, 1919; minister without portfolio, 1920; secretary for War, 1921-22 and again 1924-29; and postmaster-general, 1923-24. In 1916 he was made a baronet. He died Feb. 14, 1931.

Wotton, SIR HENRY (1568-1639). English diplomatist and poet. Educated at Winchester and at New and Queen's Colleges, Oxford, he travelled for seven years, and was in 1595 admitted a barrister at the Middle Temple. He became an agent of the earl of Essex,

Sir Henry Wotton,
English diplomatist
After C. Jansen

was knighted 1603, and acted as ambassador at Venice, 1604-12, 1616-19, and 1621-24. He was employed on missions to France, The Hague, and Vienna, on behalf of Elizabeth of Bohemia, to whom he addressed a famous poem. Wotton defined an ambassador as "an honest man sent to lie abroad for the good of his country." He became M.P. for Appleby, 1614; was provost of Eton from 1624; and M.P. for Sandwich, 1625. He died at Eton, Dec., 1639,

entered for a prize offered by a local committee. Although the prize was awarded to Henry Greathead, this inventor incorporated many features of Wouldhave's design in the vessel he eventually floated. Wouldhave died Sept. 28, 1821.

Wound (A.-S. *wund*). Injury associated with severance of the skin. Wounds are divided into three classes: punctured or stab wounds, such as those made by a dagger or bullet, in which the depth is greater than the length; incised wounds made by sharp cutting instruments, in which the length is greater than the depth; and lacerated wounds, in which there is tearing of the tissues, as in injuries by machinery, bites of animals, or shrapnel. The immediate dangers arising from wounds are fatal haemorrhage, death from interference with the functions of a vital organ, and complications (e.g. tetanus) arising from entry of bacilli or dirt into the bloodstream. (See First Aid.)

In Great Britain, unlawful wounding is punishable with five years' imprisonment. Wounding with intent to maim or to do grievous bodily harm, or to resist or prevent arrest, is punishable with life imprisonment. A wound is caused only if the skin is broken.

Woundwort (*Stachys sylvatica*). Perennial herb of the family Labiatae. A native of Europe, Siberia, and the Himalayas, it has a creeping rootstock, and branching stems about three feet high. The large, heart-shaped leaves have coarse toothed edges and are covered with soft bristles; the upper leaves are lance-shaped. When bruised, the plant gives out a strong, fetid odour. The tubular, two-lipped, dark crimson or red-purple flowers are in whorls around the upper part of the stem. See Labiatae.

Wouwerman, PHILIP (1619-68). Dutch painter. Born at Haarlem, he studied under his father

Philip Wouwerman,
Dutch painter

William Wouldhave,
British inventor

and Jan Wynants (q.v.). He painted figures and animals, generally in an open-air setting, with great technical skill and industry. His rendering of

Worthing. The sea front, looking W., of this popular Sussex resort

Jefferies and Hudson. Fruit and flowers are grown. Further enlargement brought Goring, Durrington, and other places within the bor. The town was incorporated in 1890 and allotted an M.P. in 1945. Pop. est. 70,000.

Worthington-Evans, SIR LAMING (1868-1931). British politician. Born Aug. 23, 1868, and educated at Eastbourne College, he became a solicitor in 1890, and was M.P. for Colchester, 1910-29, and for S. George's, Westminster, 1929-31. He was parliamentary secretary to the ministry of Munitions, 1916; minister of Blockade,

and was buried in the college chapel. His works include *The State of Christendom*, publ. 1657; and letters and poems, posthumously issued as *Reliquiae Wottonianae* in 1670, the year in which Walton brought out a *Life*. Consult also *Life*, L. P. Smith, 1907. *Pron.* Wootton.

Wouldhave, WILLIAM (1751-1821). British lifeboat designer, who was a parish clerk and house painter at South Shields. After the wreck of the *Adventure* with all hands at the mouth of the Tyne in 1789, he invented an uncapsizeable lifeboat, which he

horses is especially distinguished, and he is represented in most of the European galleries. He lived and died at Haarlem.

Wozzeck. Opera by Alban Berg. The libretto, written by the composer, is based on Georg Büchner's drama of 1836, and the score, completed in 1922, is in three acts divided into 15 scenes. It represents Berg's finest achievement in formal construction, and marked a departure from close imitation of Schönberg. It was first produced at Berlin opera house, Dec. 14, 1925.

Wrangel, FRIEDRICH HEINRICH ERNST, COUNT (1784-1877). German soldier. Born at Stettin, April 13, 1784, he fought in the wars against Napoleon, held a command in Slesvig-Holstein in 1848, and was nominal commander of the Austro-Prussian forces in the war against Denmark in 1864. As governor of Berlin he put down without bloodshed the rising of 1848. Cavalry general that year and marshal from 1856, Wrangel did much to improve the condition of the Prussian army. He died Nov. 2, 1877.

Count Wrangel,
German soldier

Wrangel, KARL GUSTAV, COUNT (1613-76). Swedish soldier. Born Dec. 23, 1613, at Uppsala, the son of a prominent soldier, he served under Gustavus Adolphus in Germany as a cavalry leader when quite a youth. In 1644 he led the fleet in a successful action against the Danes at Fehmarn. In 1646 he was appointed commander-in-chief of the Swedes, coping with Turenne in Germany, and he remained at his post until the end of the war. Later Wrangel served against Poland, Denmark, and Brandenburg, and took part in affairs of state, being a regent for Charles XI from 1657. He died July 5, 1676.

Count Wrangel,
Swedish soldier

Wrangel, PETER NIKOLAEVICH, BARON (1878-1928). Russian soldier. Born in St. Petersburg, Aug. 15, 1878, and trained at the school of army engineers, he served in the Russo-Japanese War, and in the First Great War rose to general of a division. On the abdication of

the tsar, he threw in his lot with Alexeieff, and after the Bolsheviks came into power sided with Denikin (*q.v.*), succeeding that general as leader of the anti-Bolshevist forces. In 1920 he was defeated by the Bolsheviks, but not before he had effected the escape of nearly 150,000 refugees. He died in Brussels, April 25, 1928.

Wrangel Land. Island in the Arctic Ocean, off the N.E. coast of Siberia. It is situated in lat. 71° N. and long. 179° W., and is separated from the Siberian coast by Long Sound. It was discovered by an Englishman, Kellett, in 1849, and named after a Russian explorer, F. von Wrangel. The British flag was raised on the island in 1921, whereupon Canada claimed sovereignty, but renounced it three years later.

Wrangell Mts. Group of volcanic mts. in Alaska. It is situated at the great bend of the Copper river and reaches 16,140 ft. alt. in Blackburn Peak; Wrangell Peak attaining 14,005 ft.

Wrangler. One who wrangles or disputes. The term was applied at an early date in Cambridge university to those who took part in disputation (*q.v.*). Later it was given to an undergraduate taking a first class in Part I of the mathematical tripos. Until 1909 the title senior wrangler was given to the undergraduate who headed the list. Since that date the classes have been subdivided into divisions, the names in each being arranged in alphabetical order.

Wrasse. A family of fishes (Labridae), notable for their thick lips and beautiful coloration. They include numerous species, and are found about rocky shores and coral reefs. The majority feed upon molluscs and crustaceans, and are provided with powerful crushing teeth. Typical wrasses are found in the Mediterranean, but are scarce in the N. seas of Europe, only a few species occurring about the British shores. The remarkably gorgeous parrot fish of the Mediterranean belongs to the wrasse family.

Wrath, CAPE. Headland of Sutherlandshire, Scotland. It is 30 m. W.N.W. of Tongue, and forms the extreme N.W. promontory of Scotland. It is a granite rock 523 ft. in height, with a lighthouse on the summit.

Wraxall, SIR NATHANIEL WILLIAM (1751-1831). British writer. Born April 8, 1751, at Bristol, and there educated, he worked during 1769-72 for the East India Co. in Bombay and elsewhere. Returning to England after visiting

Portugal and N. Europe, he was elected to parliament, 1780, resigning in 1794. He received a baronetcy in 1813. In 1815 he was imprisoned for a libel on Count Woronzow, contained in his *Memoirs of My Own Time* (1772-84). Wraxall died at Dover, Nov. 7, 1831. His works include *Memoirs of the Valois Kings, 1777*; *History of France from Henry III to Louis XIV, 1795*; and posthumous *Memoirs of his own time (1784-90)*.

Sir N. Wraxall,
British memoir writer
After J. Wright

Wreath. Literally, a chaplet or garland. Early wreaths were mainly used to honour victors of various kinds, but today they are chiefly used as a sign of respect for the dead. There are several kinds of wreaths in heraldry. That placed round a helmet or under a crest represents the helmet scarf, and is shown as a twisted two-coloured band, now almost invariably a metal and a colour, either those on the shield or those of the livery. See Heraldry.

Wreath in
heraldry

Wreck. Vessel which has been stranded or so badly injured as to be helpless. In the Merchant Shipping Act, 1894, a wreck is defined as including jetsam, flotsam, and derelict found in or on the shores of the sea or any tidal water. Under the Larceny Act, 1916, it is a felony to plunder or steal any part of vessels wrecked, stranded, or cast on the shore, or any goods belonging to such vessel. In the Act of 1894 are regulations which deal with the duty of the receiver of a wreck. It prevents plunder, reports to Lloyd's in the case of any wreck exceeding £20, etc. A wreck commissioner may be appointed by the board of trade to inquire into the circumstances of a wreck. See Salvage.

Wrekin. Hill of Shropshire, England. It is 2½ m. S. of Wellington, and is made up of volcanic ashes and lavas of Uriconian age. There are remains of a camp on the summit, which is 1,335 ft. high and from which there is an extensive view. "All friends round the Wrekin" is a popular Shropshire toast. The Wrekin gives its name to a co. constituency.

Wren (*Troglodytes troglodytes*). Small insectivorous bird of the family Troglodytidae. It is a

Wren. Little song-bird, familiar in the hedgerows of Britain
W. S. Berridge, F.Z.S.

native of Europe, Asia, and N. Africa, and one of the most familiar British birds. About four inches in length (the male slightly larger), its general coloration is brown, pencilled with darker and lighter tints. Its short, cocked-up tail is a distinctive feature. The domed nest is comparatively large. See Eggs, colour plate; Farthing.

Wren. Popular name for a member of the W.R.N.S., the Women's Royal Naval Service (*q.v.*).

Wren, SIR CHRISTOPHER (1632-1723). English architect. The son of a clergyman, he was born at East Knoyle, Wilts, Oct. 20, 1632. He was educated at Westminster and went in 1649 to Wadham College, Oxford; already he had worked as an assistant to (Sir Charles) Scarborough in his experiments and demonstrations on anatomy, and acquired a sound knowledge of the subject. Wren was a fellow of All Souls in 1653, and in 1657 professor of astronomy at Gresham College, London. He was entrusted in 1660 with the task of drawing up the preamble to the charter which founded the Royal Society, and long remained one of its most active members, being president 1680-82. It was before the society that he demonstrated many experiments and inventions, including a self-registering weathercock, 1663, a new level "for taking the horizon every way in a circle," 1666, a pair of

jointed telescopes for making astronomical measures, 1667, and a proof of the laws of motion, 1668. He remained shy and retiring, and there is reason to suppose that many of Wren's ideas were claimed by foreign scientists.

Wren's first architectural designs were for Pembroke College, Cambridge, and the Sheldonian Theatre, Oxford, begun in 1663 and 1664 respectively, both excellent in their way, but immature. In these Wren must have relied largely on his innate genius, immense knowledge of mathematics, and skill as a draughtsman. He had given up his chair at Gresham College to become Savilian professor of astronomy at Oxford, 1660, and later, at the invitation of Charles II, accepted the post of assistant surveyor-general, which he held concurrently with his Oxford appointment.

His great opportunity came when the Great Fire in 1666 laid London in ruins; in his official capacity he had presented within a week of its extinction a comprehensive plan for rebuilding the entire city. This plan, a copy of which is preserved at All Souls, reveals Wren's genius at its greatest. Had it been carried into effect, London would have become the most magnificent city in the world, and the terrible problems of haphazard building, which involved later ages in such danger and expense, would have been for the most part avoided. The plan was actually approved by the king, but its expense and an unwillingness to make big sacrifices for the sole benefit of posterity led to its being shelved.

Wren was knighted in 1672, and soon presented his second plan for S. Paul's cathedral; but after being initially approved this was rejected. To Wren it was a bitter blow, and in none of the later designs, one of which in 1675 was approved, did he approach the same level. But the work was begun at once, and by a lucky chance a clause in the royal commission empowered Wren to make what alterations he chose. To this fact is due the final design which vastly surpasses the plans from which officially it was built, and also in the opinion of authorities,

the original design on which Wren had set his heart. Work was far enough advanced by 1697 for services to be held in the choir, but not until 1716 was it finished. Meanwhile, in spite of the enormous labour on S. Paul's, Wren was engaged on his other works.

Of the 50 churches he designed the most famous are S. Mary-le-Bow, 1680; S. Nicholas Cole abbey, 1681; S. James, Piccadilly, 1683; S. Bride, 1684; S.

After Sir G. Kneller

Sir Christopher Wren

Lawrence Jewry, 1686; S. Stephen Walbrook, 1687; S. Magnus the Martyr, 1687; S. Margaret Pattens, 1689; S. Margaret Lothbury, 1693. Several were bombed and destroyed in the Second Great War. He also built 36 livery companies' halls; the Monument, 1671-78; Chelsea Hospital, 1682; and the Ashmolean Museum, Oxford, 1683; as well as designing the W. towers of Westminster abbey, and the William and Mary additions to Hampton Court palace. Wren was M.P. for Plympton, 1685, and for Windsor 1688-89. He died in London Feb. 25, 1723, and was buried in S. Paul's, where is a tablet bearing the words *Si monumentum requiris, circumspice* (if you seek a memorial, look around you).

Bibliography. The chief authority is the *Parentalia* (biographies of the family) by his son, Christopher, pub. by his grandson, Stephen, 1750. Lives include those by J. Elmes, 1823; L. Phillimore, 1881; A. Stratton, 1897; L. Millman, 1908; Sir L. Weaver, 1923; C. Whitaker Wilson, 1932; G. Webb, 1937. Consult also Wren's City Churches, A. H. Mackmurdo, 1883.

Wren, PERCIVAL CHRISTOPHER (1873-1941). A British author. Having served in the British and Indian armies and also in the French foreign legion, he was for a

Wrekin. The Shropshire hill, probably an extinct volcano, from Ercall Hill. See facing p.
Frith

time assistant director of public education in the then Bombay presidency. He achieved immense popularity as a novelist with his dramatic and well-told stories of life in the foreign legion, such as *The Wages of Virtue*, 1916; *Beau Geste*, 1924; *Beau Sabreur*, 1926; *Flawed Blades*, 1933. *Beau Geste* was made into successful films. Wren died Nov. 22, 1941.

Wrench (A.-S. *wrenc*, cognate with wring). Name given to several kinds of spanner. (1) An adjustable spanner, in which a longitudinal screw regulates the distance between the jaws. (2) A pipe wrench, a bar with the end formed as tapered jaws, one of which is toothed to grip a pipe or round bar. (3) A pipe wrench in which two bars are hinged on a pin near one end, and toothed on their jaw edges so as to grip and turn a pipe or round bar. (4) A tap wrench, a bar enlarged at the centre with one or more holes to receive the square ends of the taps of a set of stocks and dies.

Wrench, Sir (JOHN) EVELYN (LESLIE) (b. 1882). British publicist. Born at Brookborough, Fermanagh, on Oct. 29, 1882, he was educated at Eton. He entered journalism in 1904, being attached to Northcliffe's staff until 1912, when he devoted his energies entirely to propaganda work for imperial development. The founder and organizer of the Overseas club movement, the Royal Empire society, the English-speaking Union, and the All Peoples' association, he lectured and wrote on international relations and peace, and started and edited *Over-Seas*. Sir Evelyn was also chairman of the company owning *The Spectator*, which he edited from 1925 until 1932, the year of his knighthood. His reminiscences, *Uphill*, appeared in 1934; *Struggle*, a year later; *The Immortal Years*, 1945.

Wrestling. A form of self-defence, competitive sport, and athletic exercise. There are four main styles of wrestling practised in Europe, of which the last two are largely confined to Great Britain: 1. Catch-as-catch-can (also known as Lancashire or free style); 2. Greco-Roman; 3. Cumberland and Westmorland; 4. Cornwall and Devon (also practised in Brittany). Except in the last style, for which the wrestlers wear canvas jackets used as a leverage to throw an opponent, any form of clothes that can be gripped and turned to an advantage are excluded.

Wrestling. Holds and other movements in the catch-as-catch-can style

The most widely practised of these styles is undoubtedly catch-as-catch-can, always represented at the Olympic Games. It is a skilful sport embracing rules for fair play that are as varied and clearly defined as those of boxing. In amateur catch wrestling all holds likely to cause injury or unnecessary pain are strictly barred, but tripping and struggling on the ground are permitted. Under championship conditions a contest consists of three bouts each limited to 15 minutes. To win a match the wrestler may obtain two clean falls from standing position, or pin his opponent's shoulders to the mat for one second while struggling on the ground, or win on points. Contests usually take place on a thick bristle mat about 16 ft. square and covered with tarpaulin.

The British National Wrestling Association formulates rules and regulations covering the annual championships, organizes international contests, and looks after the interests of affiliated clubs that flourish particularly in London and Manchester. Catch wrestling is also practised professionally, but the rules are somewhat freer; and holds liable to cause injury or pain are permitted,

but a wrestler may submit and lose the bout. The so-called "all-in" wrestling, or rather fighting, is often wrongly identified with professional catch wrestling.

In the Greco-Roman style all holds are taken above the waist, tripping or the offensive use of legs and feet is prohibited, and ground wrestling is encouraged. The fall is the same as in catch.

The Cumberland and Westmorland style requires taking a preliminary hold before the struggle actually begins. Each contestant passes his right arm under the other's left, and the hands are joined across the spine, giving to both an equal hold. Play then commences, and the first down is the loser. A wrestler is considered down when any part of the person other than the feet touches the ground. Tripping is an essential feature. Breaking the grip, play having commenced, is equivalent to losing the fall. This is an outdoor style of wrestling, and the same is true of the Cornwall and Devon style. In this, tripping is included; there is no ground wrestling; and both shoulders and one hip, or both hips and one shoulder, touching the ground at the same moment constitute a fall. See Jujitsu.

Wrexham. Mun. bor. and market town of Denbighshire, Wales. It stands on the Clywedog, 12 m. S.W. of Chester, and is served by rly. Always an important border town, it has grown larger with the development of the neighbouring coalfields. It is an agricultural centre, with wholesale, retail, and live-stock markets. Brewing, malting, and tanning are occupations. The bor. lies in a development area. The church of S. Giles, dating from the 15th century, has one of the finest towers in Wales. Its N. porch was restored in 1901 by graduates of Yale in honour of Elihu Yale, who was buried here. Market days, Mon. and Thurs. Pop. est. 29,200.

Wrexham arms

Wright, ROBERT ALVERSON WRIGHT, BARON (b. 1869). British judge. He was born Oct. 15, 1869, and educated at Trinity College, Cambridge. A fellow of Trinity, he was called to the bar in 1900, becoming K.C. in 1917, and a judge in 1925. In 1935 he was made a lord of appeal in ordinary, and a life peer. For two years Wright was master of the rolls, then again a lord of appeal in 1937. In 1947 he resigned, having also served as chairman of the U.N. war crimes commission. In 1939 he published a volume of Legal Essays and Addresses.

Wright, SIR ALMROTH EDWARD (1861-1947). British pathologist. He was educated at Trinity College,

Sir Almroth Wright, British pathologist

Dublin, afterwards studying at several German universities. In 1887 he was appointed demonstrator of pathology at Cambridge, and in 1889

of physiology at Sydney, N.S.W. From 1893 to 1902 Wright was a professor of pathology at the army medical school, Netley, after which he was given the chair in experimental pathology at London university, and principal of the institute of pathology at S. Mary's Hospital. He carried out a series of important investigations on inoculation by dead cultures against typhoid, etc., and during the First Great War his methods proved of great value against wound infection.

Knighted in 1906, the same year in which he was elected F.R.S., he wrote books on inoculation and immunisation. Sir Almroth died May 1, 1947.

Wright, JOSEPH (1734-97). British painter, known as Wright of Derby. Born in Derby, Sept. 3, 1734, he studied in London under Hudson and at the R.A. schools. He painted landscapes, portraits, and clever candle-light pictures, a good example of which is *The Alchemist*. He was elected A.R.A. in 1781, but declined full honours when offered them. For some

Joseph Wright, British painter

Wrexham, Denbighshire. Parish church of S. Giles, restored in 1867

years he lived at Bath, but in 1777 returned to Derby, where he died Aug. 29, 1797. Works by him are in the National and National Portrait galleries. See *illus.* p. 268.

Wright, JOSEPH (1855-1930). A British philologist. Born at Bradford, Oct. 31, 1855, he became a mill-hand and did not learn to read until he was 16. After teaching in Germany, where he studied philology, he became deputy to Max Müller at Oxford, 1891, and in 1901 professor and in 1925 professor emeritus of comparative philology there. He died Feb. 27, 1930. Wright was one of the chief authorities on English philology, and at Oxford was instrumental in developing the Taylorian Institution. His *Oxford Dialect Dictionary*, 1896-1905, secured him a civil list pension in 1899; it

was followed by a series of historical grammars of Old German, Old English, comparative Greek, and Gothic. Consult J. W., Man and Scholar, E. M. Wright, 1932.

Wright, WHITAKER (1845-1904). British financier. He was born Feb. 9, 1845. After some years of successful speculation, he was sentenced in London, Jan.

26, 1904, to seven years' penal servitude, for frauds on the shareholders and creditors of the London and Globe Finance Corporation by the issue of fraudulent balance sheets. The company collapsed in 1901, and two other Whitaker Wright ventures failing and causing widespread disaster, there was a demand for his prosecution, which was for long abortive. The total deficit was £5,500,000. Wright fled to the U.S.A., and was not extradited until 1903. He committed suicide on the day sentence was passed.

Wright, WILLIAM ALDIS (1836-1914). British scholar. Educated at Trinity College, Cambridge, he was secretary to the O.T. revision committee, 1870-85, vice-master of Trinity, Cambridge, 1888-1912, and joint editor of *The Journal of Philology*. He was editor, with W. G. Clerk, of *The Cambridge Shakespeare*, 1863-66, 2nd ed. 1891-93; and the *Globe Shakespeare*, 1864. In addition to Bacon's Essays, Milton's Poems, and Roger Ascham's English writings, he edited the Works of Edward FitzGerald, 7 vols., 1903. He died May 19, 1914.

Wright Brothers. Two American pioneers of flying. The elder, Wilbur Wright (1867-1912), was born at Millville, Ind., on April 16, 1867, the younger, Orville (1871-1948), at Dayton, Ohio, on Aug. 19, 1871. The pioneers of flight in power-driven machines, they began by experimenting with gliders, at Kitty Hawk, N.C.

The Wright brothers, flying pioneers: left, Orville; right, Wilbur

Whitaker Wright, British financier

By 1903 they had virtually solved the problems of aeroplane control. To the glider they added a petrol engine, and on Dec. 17, 1903, they made four flights, the longest of 852 ft., which entailed being in the air for nearly a minute. That was the first occasion on which a man had been carried from the ground in an aeroplane.

In 1905 Wilbur covered 24 m. in 38 mins. The brothers went in 1908 to France and there demonstrated their conquest of the air. At Dayton, Ohio, they set up an aircraft-making business, which had become highly successful, though involved in much litigation with rival claimants, by the time Wilbur died of typhoid fever on May 30, 1912. Orville continued to manage the concern and lived until Jan. 30, 1948. Consult The Wright Brothers, F. C. Kelly, 1944.

Wrightia tinctoria OR PALA INDIGO. Small tree of the family Apocynaceae. Growing native in

Wrightia tinctoria. Leaves, flower clusters, and long, slender pods

the Indian sub-continent, it has large oval leaves of variable breadth and clusters of white flowers. From the leaves an inferior kind of indigo is prepared. The wood is close-grained and much like ivory, which makes it suitable for toys, turning, and inlaying.

Wrighton. Village of Somerset, England, 6 m. N.N.E. of Axbridge. It has a rly. service. It is famous for its church, the tower of which is perhaps the finest in Somerset, and as the birthplace of Locke. Pop. 1,369.

Wrinkles. Lines and creases in the skin produced by the action of the underlying muscles. The constant repetition of particular muscular actions leads eventually to wrinkles becoming permanent. Some lines in the forehead are recognized by psychologists as reflecting tension in brain areas.

Wrist OR CARPUS. In man, the joint and structures which separate the bones of the arm from those of the hand. It is composed of eight bones arranged in two rows, namely, the scaphoid, lunar, pyramidal, pisiform, trapezium, trapezoid, os magnum, and unciform. At the upper margin the bones present smooth cartilaginous surfaces for articulation with the radius and ulna of the forearm. At the lower margin are surfaces for articulation with the metacarpal bones of the palm. See *Dropped Wrist*.

Writ. Literally, something written. The word is now used exclusively for orders issued by the courts of law. In the U.K. almost all legal proceedings begin with the serving of a writ by the plaintiff upon the defendant. Writs are issued after certain formalities have been complied with and fees paid, and state what the plaintiff demands. Writs must be served, i.e. handed to, the defendant in person, unless he agrees to accept service through a solicitor, although the courts can order a substituted service. The term is also used in connexion with parliamentary elections, as these take place on receipt of a writ addressed to the returning officer. Formerly new peers were created by writ, and the word is also used in connexion with convocation. See *Habeas Corpus*.

Writer's Cramp. Spasmodic contraction of some of the muscles of the fingers and hand, associated with neuralgic pains, which comes on whenever the sufferer attempts to write. The spasm does not occur when the hand is used for other actions, and is due to fatigue of the brain centres governing the particular movements involved in writing. Psychologists consider that this type of spasm has some connexion with experiences in youth. A similar spasm may occur in weavers, cigarette rollers, and telegraph operators, owing to the excessive use of a particular group of muscles. Prolonged rest is essential, and massage is helpful.

Writing. Art of communicating ideas, on some more or less durable surface, by means of signs intelligible to the eye, with a view to their transmission to others or their preservation to future generations. The two main stages in the development of writing, which

Writing. Scripts taught in the 20th century, founded on the distinctive lettering of the 16th century (reduced to quarter size)

By courtesy of Sir Isaac Pitman & Sons

at times overlap, are ideography, the representation of objects or ideas by means of pictures; and phonography, the representation of sounds by written symbols.

The earliest method of writing was pictography, picture-writing. Gesture-language, including the deaf and dumb system, of communication, has also been described as a kind of writing.

The Latin system of writing, the cursive style of which is the parent of most of the European systems,

originally did not distinguish the forms of the letters for use in MSS. and inscriptions. Both were what is known as capital, in which each letter had a separate outline, as contrasted with cursive (running hand), in which the separate strokes were joined. By rounding off the letters and altering their original proportions capitals became uncials; a later development was the semi-uncial, in which, under the influence of cursive, majuscule (large letters) more and more gave way to minuscule (small letters). In early times the Romans had a cursive system, which was used in copies of imperial rescripts and may be seen in the *graffiti* or mural inscriptions of Pompeii. This cursive gradually spread from Italy over the West and was the origin of the national systems of writing.

Irish and Carolingian

The origin of the Irish script is obscure; it was probably brought to Ireland by missionaries from Gaul. It exercised great influence on European writing through the foundation of monasteries in Germany, Switzerland, Gaul, and Italy. Anglo-Saxon, derived partly from Irish and partly from Roman script, is of special importance as the parent of the Carolingian (Caroline) minuscule, the source of the modern alphabet. In the 9th century Charlemagne decided to reform the existing system of writing. The result was the formation of the Caroline minuscule, a compound of all kinds of script—capital, uncial, and minuscule—and this was at its best towards the end of the 11th century.

It gradually deteriorated, however, and by the 14th century had developed into Gothic or Black Letter, in which the rounded parts of the Caroline minuscule were angularised. This is the origin of the modern German printing script. In Italy, however, there was a renaissance of the Caroline style in the form of an elegant script, which through the medium of the great printers, such as Aldus, became the basis of the modern types of writing.

The invention of printing had obviously a great influence on writing, but it was some time before this was felt, and the beautiful penmanship of the medieval scripts persisted into the 17th century. Gradually, however, writing deteriorated. Reasons were the introduction in 1820 of the steel pen, which made writing worse because the older models were unsuited for this kind of pen, and the increase in speed demanded by modern

conditions, which made continuous pen movement, often attended with illegibility, more general. In the 20th century there arose a movement for a return to forms of writing in use in Tudor times. Apart from any question of its greater beauty, the "script" method, as taught in many schools, in which each letter is written separately, has the advantage that the same symbol is used for writing as for printing, thus making the task of the child lighter. Meanwhile there has been a revival of old-style scripts as an art form, for which both quill and reed pens are used. This "art" revival has proved popular enough to have been reflected commercially in show cards, etc. The standard British work on the history and practice of writing is Edward Johnston's *Writing, Illuminating, and Lettering*, first published in 1906 and many times reprinted. See Alphabet; Cuneiform; Ink; Lettering; Manuscript; Palaeography; Paper; Papyrus; Pen.

Wroclaw. Polish name for the city of Silesia called in German Breslau (*q.v.*).

Wrotham. Urban district of Kent, England. It is 6 m. N.E. of Sevenoaks and on the main London-Canterbury road; it is served by Green Line, and has a rly. station, Wrotham and Borough Green. The church of S. George, an Early English building, has some old brasses and a screen of the 14th century. Here until about 1350 the archbishops of Canterbury had a palace. Pop. 4,516. *Pron.* Rootam.

Wrought Iron. One of the purest forms of iron available commercially. Some of the Swedish and Russian irons have a purity of 99.75 p.c., containing less than 0.2 p.c. of carbon with minute traces of other impurities. Wrought iron does not harden like steel by being quenched in water while hot; it is easily magnetised, but does not retain the magnetism. It appears on the market in the forms of billets, bars, angles, tees, plates, sheets, rods, rails, joists, and channels. The tensile strength of wrought iron ranges from 17 to 27 tons per sq. in. See Iron; Metalurgy; Steel.

Wroxeter. Village and parish of Shropshire, England. It is situated on the Severn, 6 m. S.E. of Shrewsbury. The Roman Uriconium, capital of Britannia Secunda, it contains interesting remains, including part of the public baths and a wall of the basilica. The

church of S. Andrew has a Saxon nave. See Uriconium.

Wroxton Abbey. Former seat of Lord North, near Banbury, Oxon, England. Built 1618 by Sir William Pope, 1st earl of Downe, and notable for its fine hall, chapel, library, portraits, and Stuart relics, it passed to the North family by the marriage of Francis North, 1st Baron Guilford, and Lady Frances Pope, sister of the 4th and last earl of Downe. It occupies the site of a priory of Augustinian canons founded by Michael Belet in the reign of John and dissolved in 1534.

Wryneck (*Jynx*). Small British bird, related to the woodpeckers. Its name is due to the habit of

Wryneck. Bird which feeds largely on ants

twisting its neck as it picks up ants. The general colour of the upper parts is grey, spotted and barred with brown, while the under parts are dull white with brown markings. The

bird is fairly common in the S. of England, rare in the N. and in Scotland, and absent from Ireland.

Wuchang. Capital of Hupeh prov., China. It is on the right bank of the Yang-tse river, opposite Hankow and Hanyang, which together with Wuchang form the "three cities," the chief trade centre and most important industrial area of central China, with a total pop. of about 1,250,000. Wuchang has cotton and ore-crushing mills. During the Japanese advance on Hankow in 1938 Wuchang was severely bombed on July 12, more than a hundred being killed. The Japanese entered Hankow, Oct. 25, after the Chinese had withdrawn, and occupied Wuchang next day, no attempt being made by the Chinese to hold it. The loss of the "three cities," which remained in possession of the invaders until Japan's surrender in 1945, deprived the Chinese forces of their principal internal source of war supplies. From Sept., 1943, Wuchang was subjected to periodical attack by U.S. aircraft.

Wu-chow. Former treaty port of China, at the junction of the Cassia river with the Si-kiang or West river, Kwangsi prov. It was opened to foreign trade in 1897. During summer floods, the river may rise 50 ft. Pop. 58,106.

Wuhu. River port in Anhwei prov., China. It stands on the right bank of the Yang-tse river, 256 m. W. of Shanghai. It was opened to foreign trade in 1877. Rice and cotton are exported, while the neighbourhood is interested in coal and silk.

On Dec. 5, 1937, Japanese aircraft dropped six bombs on two British craft at Wuhu, the Tuck-wo 3,700 tons, and the Tatung, 1,560 tons, the first being burned to the waterline, the second holed so that she had to be beached. Forty-two Chinese were killed, 100 injured, and bomb splinters hit the British river gunboat *Ladybird*, her commander, Lieut.-Cmdr. Barlow, being slightly injured. This attack on the *Ladybird* was among the crimes for which Col. Hashimoto was condemned to life imprisonment in 1948 (see Tokyo Trials). The Japanese captured Wuhu a day or two later, and from it attacked by warship up river towards Hankow. They held Wuhu until their general surrender in 1945.

Wukari or **OKARI.** Town in the Benue prov., Nigeria. Situate 28 m. S. of the Benue river, between its Katsena and Donga affluents, it was the capital of the former native Kororofa kingdom, founded more than three cents. ago by Hamites from the Sudan.

Wulfenite. Minor ore mineral of molybdenum, lead molybdate, $PbMoO_4$. It is found as yellow to orange tabular crystals in the oxidised parts of ores containing galena (lead sulphide) and molybdenite (molybdenum sulphide).

Wulfhere (d. 675). King of Mercia. The youngest son of the heathen King Penda, he nominally succeeded to the crown in 655 and was the first Mercian ruler to be baptized. He expelled the Northumbrians in 659, and augmented his realm at the expense of Wessex, exercising sway as far as Sussex and possibly Kent. His chief victory occurred in 661 at Posentebryg (perhaps Pontesbury, Salop). Wulfhere appreciated the political value of a stable Church, and encouraged missionaries.

Wulfstan or **WULSTAN** (c.1012-95). English saint and prelate. Born at Long Itchington, near Warwick, he was educated at Evesham and Peterborough. Entering the monastery at Worcester, he became prior, and in 1062 was consecrated the last Anglo-Saxon bishop. He died Jan. 18, 1095. He was canonised in 1203 and his feast day is Jan. 19. Another Wulfstan (d. 1023) became archbishop of

York in 1003. A remarkable homily in alliterative prose (ed. A. Napier, 1883), vividly describing the state of England in 1014, has been attributed to him; his writings probably influenced Canute.

Wullenweber, JÜRGEN (c.1492-1537). Hanseatic statesman. Born of a Hamburg family, he was made a burgher of Lübeck in 1530, and as burgomaster in 1533 conceived the idea of reviving the Hansa power by subjugating the commercial cities of the Netherlands and Denmark. His policy met with great opposition, and, seized while passing through the territory of the archbishop of Bremen in 1535, he was imprisoned at Wolfenbüttel. Under torture he made admissions, which as soon as he was released from the rack he declared to be false, of peculation and of Anabaptist tendencies. He was executed, Sept. 24, 1537, and became the hero of Lübeck.

Wundt, WILHELM MAX (1832-1920). German psychologist. Born at Neckarau, Baden, Aug. 16, 1832, he studied medicine at Tübingen, Heidelberg, and Berlin. He became a lecturer and professor at Heidelberg. In 1874 Wundt transferred to Zürich as professor of philosophy, and in 1875 to Leipzig, where in 1879 he founded the first laboratory for experimental psychology. Wundt regarded philosophy as universal science, which performs the synthesis of particular sciences. Psychology, according to him, is "the science of immediate experience." His great merit is that he applied the inductive method to the purely philosophical sciences (logic, ethics), and used physiology as the basis of psychology, but not an end in itself. In ethics he was an evolutionist. He died at Leipzig, Aug. 31, 1920. Among his chief works, with dates of Eng. trans., are: *Ethics*, 1897-1901; *Human and Animal Psychology*, 1901; *Principles of Physiological Psychology*, 1904; *Logic*, 1906; *Outlines of Psychology*, 1907; *Introduction to Psychology*, 1912; *Introduction to Philosophy*, 1914; *Elements of Folk Psychology*, 1916. *Pron.* Voont.

W. M. Wundt, German philosopher

Wu Pei-Fu (1873-1939). Chinese soldier. A native of Shantung, he entered the civil service, then in 1898 the army. In 1917 he fought against monarchist forces,

overthrowing the Anfu government, and came to the front in 1920 as governor and inspector-general of Hupeh and Hunan. Always hostile to Japanese influence, in 1922 he assailed and defeated Chang Tso-Lin, pro-Japanese governor of Manchuria, and was hailed as the saviour of China. Another campaign against Chang in 1924 led to the betrayal of Wu by his former colleague, the general Feng. He fled to Japan, but next year forced Feng to evacuate Peiping. Wu was defeated in 1926 by invaders from Canton, and went into retirement in Szechwan, dying Dec. 4, 1939.

Wuppertal. Industrial town of Germany. It lies in the Ruhr basin, 18 m. E. of Düsseldorf, and was formed by the union in 1929 of the twin towns of Elberfeld and Barmen, and the suburbs of Cronenberg, Ronsdorf, and Vohwinkel. Wuppertal (Wupper valley) is situated in the narrow valley of the river Wupper and owes its rapid growth to its textile industry; before the Second Great War, it made linens, carpets, rayon, clothing, etc., and had also ironware, machinery, tool, chemical, wallpaper, and other factories. An important rly. centre, it had a striking feature in an overhead hanging electric railway, the *Schwebelbahn*, constructed above the river so as to relieve traffic in the narrow streets of Elberfeld, which dates from the 13th century, and became a municipality in 1610. Barmen, founded in the 11th century, was made a town in 1808. Industrialisation began in the 18th century.

Wuppertal suffered under the Allied bombardment from the air of the Ruhr area during the Second Great War; it was captured by the U.S. 9th army April 15, 1945, and after Germany's surrender lay in the British zone of occupation. Pop. 352,500.

Wurm See. Lake of Bavaria, Germany. Also known as the Lake of Starnberg, it is 18 m. S.W. of Munich in a residential dist. It is 1,920 ft. above sea level, and is 370 ft. deep, $12\frac{1}{2}$ m. long, and from $1\frac{1}{2}$ to 3 m. wide. Steamers connect the pleasure resorts on the lake. Herein Louis II, king of Bavaria, was drowned, June 13, 1886.

Württemberg. Former German free state, until 1918 a kingdom, third in size, fourth in pop., of the second German empire. It was 7,534 sq. m. in area, with a pop. (1940) of 2,696,324. Its capital was Stuttgart (q.v.); there were no other towns of more than 100,000. Tübingen has a famous university.

The greater part of Württemberg, combined with N. Baden, was in 1946 formed into the *Land* of Württemberg-Baden (area 6,033 sq. m.; pop. 3,650,000). The S. portion, with some former Prussian territory, became the *Land* of Württemberg-Hohenzollern (area 3,886 sq. m.; pop. 1,115,000).

With spurs of the Alps and Black Forest in the S. and S.W., and the Swabian Alps in the S.E., Württemberg is fertile, 62 p.c. of the soil being under cultivation. The chief river is the Neckar, but the Danube, navigable from just inside Württemberg's borders, rises in that country; there are many smaller rivers, and the N.W. part of the lake of Constance lies within it. It has many salt deposits and mineral springs, feeding spas, e.g. Wildbad and Teinach. Forestry is important and timber industries of every kind flourish, with paper, textile, car, furniture, leather and shoe, clock and musical instrument making, also engineering.

The pop. belongs chiefly to the Swabian tribe, but has absorbed Roman, Frankish, Hugenot, and other elements. It has long been reported intelligent, hard working, and progressive, and constitutes the oldest and one of the most liberal and democratic of German communities. It is 67 p.c. Protestant, 31 p.c. R.C.

A county within the Frankish kingdom, and partly within the Swabian duchy in the days of Charlemagne, Württemberg proper originated with a dynastic family of that name, first mentioned 1090 A.D. Counts Eberhard II and III, in the 14th and 15th centuries, fighting against knights and free cities, won large territories; Eberhard V was made a sovereign duke 1495; Ulrich (1503-50), after losing his lands for a time to the Hapsburgs, introduced the reformed religion. Homeland of the imperial dynasties of Hohenstaufen and Hohenzollern, Württemberg was involved in the Peasants' and Thirty Years' Wars and the War of the Spanish Succession, was conquered by French armies of the republic and of Napoleon, raised by him to the rank of kingdom in 1805, in arms against him—after fighting Prussians and Austrians on his side—from 1813. It stood with Austria against Prussia in 1866 and joined Prussia in 1870 only. Its last king, William II, abdicated Nov. 30, 1918; as a republic it had Socialist, Liberal, and Conservative premiers, until it came under a Nazi Reich Statthalter, Murr.

Overrun by the French 1st and U.S. 7th armies during the Second Great War, its N. part lay within the U.S., its S. part within the French, zone of occupation.

Wurtzite. Rare mineral form of zinc sulphide. It differs from the common ore mineral, sphalerite (*q.v.*), which has the same composition, in atomic structure and crystal symmetry.

Würzburg. German university town. Capital of the Bavarian dist. of Lower Franconia, and fourth largest town in Bavaria, it lies in a hilly and rocky area, on the river Main, navigable from here, and 55 m. N.W. of Nuremberg, being an important rly. junction. Its architectural and other treasures included the Romanesque church of S. Burkhard (1033-42), the cathedral of S. Kilian (partly 11th century), the Neumünster church (1000-1056) with famous busts of the town's patrons by Tilman Riemenschneider, S. Mary's chapel (1377-1479) with fine tombs, the Stift-Hauger church with two towers of 280 ft. (1670-91); the castle of Marienberg, first mentioned in 704 and later the residence of the prince-bishops of Würzburg, which became the seat of a bishop in 741; the town palace, former seat of the Teutonic knights (1600), the new palace (1720-44), famous for its staircase and Tiepolo frescoes; the old university (1582-92); beautiful parks, terraces, monuments; the Julius hospital (1576-85); and three bridges, the oldest, 645 ft. long with 12 baroque statues, dating from 1543.

In a very fertile dist. producing a famous wine and much fruit and vegetables, it had also some important industries: the making of printing presses, furniture, and leather, engineering, iron founding, and printing. It had a university, 1402-34, refounded 1582, with a library of ~550,000 vols., many museums, colleges, hospitals, monasteries, and two permanent theatres. Pop. 64,350.

Würzburg was very badly damaged during the Second Great War. The R.A.F. bombed it heavily at night on March 16, 1945, starting many fires: the U.S. 7th army reached Marienberg, on the Main, on April 3, forced a passage of the river, and after fierce street fighting succeeded in overcoming German resistance on April 6. Würzburg came into the U.S. zone of occupation.

Wurzen. Town of Saxony, E. Germany, on the Mulde, 12 m. E. of Leipzig. Before the Second

Great War it enjoyed an international reputation for its carpets and tapestries; it also had biscuit, engineering, and paper works. One of the oldest German settlements E. of the Elbe, known in 961 as a stronghold and castle, it has a famous Romanesque cathedral (1114), a bishop's palace of the 15th century when Wurzen was a bishopric, and S. Wenceslas's church (1673). In 1581 it fell, together with the secularised Meissen patrimony, to Saxony. Captured by the U.S. 9th armoured div. on April 16, 1945, after Germany's surrender it lay in the Russian zone of occupation. Pop. 22,200.

Wusung. Town at the mouth of the Hwangpu river in Kiangsu prov., China. It is connected by rly. with Shanghai, 10 m. to the S., which it serves as a port.

Wuthering Heights. Only novel by Emily Brontë; published in 1847 over the pseudonym of Ellis Bell. At first severely criticised for its morbidity and violence, the story is now regarded by some critics as the finest of the prose writings of the Brontës. It stands by itself as a work of sheer imaginative power. The characters, dominated by Heathcliff, embodiment of fierce elemental passion, are well attuned to the harsh, bleak, tempestuous setting of the Yorkshire moors.

Wyalong. Town of Australia, in Bland co., N.S.W. A centre for gold mining, it is on the branch rly. to Cargelligo, and lies 342 m. W. of Sydney.

Wyandot. N. American Indian tribe of Iroquoian stock. A confederacy of four tribes, called by the French colonists Huron, and numbering about 10,000, occupied a region S. and E. of Georgian Bay, Ont., when dispersed by Champlain in 1615. After the Iroquois exterminated the Huron settlements in 1648 there arose a new tribal grouping. Called by the English Wyandot, from the native name Wednat, these people acquired paramount influence in the Ohio valley and the lake region, where they supported the British arms. In 1921 the Ontario government published MSS., written 1740-51, comprising contemporary records and a Huron (*q.v.*) grammar.

Wyandotte. Breed of domestic fowls. It originated in the U.S.A.—Wyandotte is the name of a place in Michigan—about 1872, when the birds were mentioned as American Sebrights. They are descended from Brahmas crossed probably with Polish. In shape

they resemble the Brahma, but are rounder and fuller-breasted. They have yellow legs and glossy black tails, fuller than in the Brahma. The ground colour of the plumage is white, with every feather evenly laced with black. They are hardy birds, good layers, and good sitters. See Fowl-colour plate.

Wyandotte Cave. Natural cave in Crawford co., Indiana, U.S.A. Situated about 5 m. N.E. of Leavenworth, it measures 23 m. in length and consists of a succession of galleries and divisions. The most extensive chamber, the mammoth hall, is 350 ft. long and 250 ft. high.

Wyatt, JAMES (1746-1813). An English architect, born at Burton Constable, Staffs, Aug. 3, 1746. He became an A.R.A. in 1770, and made his name by adapting and rebuilding the old Pantheon in Oxford Street, London, 1772. His chief work was done in restoration at the cathedrals of Salisbury, Hereford, Lichfield, and others, and at Windsor Castle. His action in demolishing medieval buildings of great beauty earned Wyatt the nickname of The Destroyer, but he was to some extent responsible for the Gothic revival in England. Fonthill Abbey was perhaps his best original work. He became R.A. in 1785, and died Sept. 5, 1813. His son, Matthew Cotes Wyatt (1777-1862), was a well-known sculptor, executing the equestrian statue of George III in Pall Mall. A study of the father, by A. Dale, came out in 1936.

Wyatt, ROBERT ELLIOTT STOREY (b. 1901). English cricketer. He was born May 2, 1901, at Milford, Surrey, and went to school at Esher and Coventry; so Warwickshire was the county of his adoption, and he first played for it in 1923, becoming captain 7 years later. A solid batsman, he exceeded 1,000 runs in each of 14 seasons before the Second Great War; 1937 brought 2,625 runs with nine centuries, both records for the county, and his highest innings of 232. He was a useful bowler with the new ball. Making his international début in 1929 against New Zealand, he was England's captain for the last test against Australia in 1930, and the 1934 series. From 1946 he played occasionally for Worcestershire.

Wyatt or WYAT, SIR THOMAS (c. 1503-42). English courtier, diplomatist, and poet. Son of Sir Henry Wyatt (d. 1537), he was born at Allington Castle, Kent, and educated at S. John's College, Cambridge. He enjoyed the favour

of Henry VIII, and was ambassador to Charles V, 1537-39. His too intimate relations with Anne Boleyn, and his friendship with Thomas Cromwell, led to his imprisonment in the Tower, 1536 and 1541. He was knighted in 1537, and was M.P. for Kent in 1542, but died at Sherborne on Oct. 11 the same year.

Wyatt, with Surrey, introduced the sonnet into England. Deeply read in foreign literature, he took the Italians, especially Petrarch, for his model. His satires, lyrics, and ballads show much thought if little melody. His verse was published only posthumously, in Tottel's Miscellany of 1557; his works were edited by G. F. Nott, 2 vols., 1815-16, and by E. Arber, 1870. Consult also Sir Thomas Wyatt and Some Collected Studies, E. K. Chambers, 1934.

Wyatt, SIR THOMAS (d. 1554). English conspirator. Son of the above Wyatt, the poet, he fought on the Continent from 1543. In 1554 he became a leading spirit in the plot to prevent Mary I's marriage with Philip of Spain. On Jan. 26 he raised his standard at Rochester and called on the county of Kent to depose the queen and crown Elizabeth. Popular hatred of the marriage brought Wyatt a considerable following, and he advanced on London, entering Southwark, Feb. 3. London Bridge was closed against him, but Wyatt made his way round by Kingston. His army was beaten and he was captured and beheaded, April 11.

Wycherley, WILLIAM (c. 1640-1716). English dramatist. He was born at Clive, Shropshire, and was educated in France and at Queen's College, Oxford, then was entered at the Inner Temple. His first play, *Love in a Wood*, or S.

Sir Thomas Wyatt,
English sonneteer
After Holbein

Sir Thomas Wyatt,
English conspirator

William Wycherley,
English dramatist
After Sir P. Lely

James's Park, produced 1671, established his reputation at once. He became *persona grata* at the court of Charles II, and within a year was the lover of the duchess of Cleveland, the king's mistress. According to the custom among gentlemen at that period, Wycherley then passed a short time in the navy. His second play, *The Gentleman Dancing Master*, printed 1673, was a failure; but his later works, *The Country Wife*, printed 1675, and *The Plain Dealer*, printed 1677, set the seal on his fame and served as a foundation for the great age of Restoration comedy in which Congreve, an avowed imitator of Wycherley, was chief luminary.

In 1679 Wycherley, attracted solely by her fortune, secretly married the dowager countess of Drogheda. She died two years later, and after contesting a lengthy lawsuit he was imprisoned for debt. James II released him, paying off his creditor, and Wycherley thereafter lived in retirement until his death, Jan. 1, 1716. His last years were embittered by the action of Pope, whom he had befriended and who had corrected and rewritten Wycherley's feeble verses, but who eventually poked much malicious fun at him in his old age. Wycherley was buried in S. Paul's, Covent Garden.

Wycherley's comedies are brilliant representations of the society of his time. Their plots are immoral, and their dialogue coarse; but the characters remain essentially true to life irrespective of their period. The plays enjoyed great popularity both in their own day and later, and their influence on the development of English comedy was incalculable. Consult *Brawny Wycherley*, W. Connely, 1930.

Wychwood. District of Oxfordshire, England, formerly a royal forest. In the W. of the co., between the rivers Windrush and Evenlode, it was made a royal hunting ground about 1200. It was disafforested in 1862, but there are scattered remains of it in the form of woods. Shipton-under-Wychwood is an attractive village. As Witch Wood the name supplied a title for one of John Buchan's novels.

Wycliffe, JOHN (c. 1325-84). English reformer. A native of Hipswell, near Richmond, Yorks, he went to Balliol College, Oxford, of which college he was master c. 1360, and achieved a high reputation as scholar and preacher. Thence he withdrew, perhaps

ejected in 1367 when secular clergy were superseded by monks, and took up the work of a parish priest at Fillingham, Ludgershall, and in 1374 at Lutterworth. As a zealous reformer of clerical abuses, and an able controversialist, he was called in by the political anti-clerical party headed by John of Gaunt.

Hitherto he had appeared only as an enemy of clerical vices and pretensions, and an advocate of the apostolic life of the clergy, who should not, he held, own property. The pope in 1377 issued five bills against Wycliffe's doctrines. But in 1378 he began his translation of the Scriptures

John Wycliffe, English reformer
From a print by G. White

into the vernacular, a rendering which was the basis of all later translations and may be accounted the first English prose classic. He also initiated the principle, later one of the foundations of the Reformation, of making the words of Scripture the criterion of Christian doctrine. He disseminated his teaching by pamphlets in English, and by the organization of a sort of missionary association of preachers. Hence it was a short step to an attack on the sacerdotal theory of religion, and by 1380 Wycliffe was questioning transubstantiation. This was too much for Oxford, for Gaunt and the anti-clericals, who disowned the reformer.

But such teaching could be easily adapted to their own ends, not only by anti-clericals but also by communistic social reformers, who played their part in the peasant rising of 1381; the Lollards, as Wycliffe's followers came to be called, were soon regarded rather as political anarchists than as reformers of clerical abuses. The archbishop of Canterbury condemned Wycliffe, who, however, escaped per-

secution and lived to produce his *Trilogus* and *Opus Evangelicum*. He died on the last day of 1384. This man of great intellect, fearlessness, and honesty had a most important influence abroad, especially in Bohemia, through his great disciple Hus. In England his work appeared to fail immediately in the persecution of the Lollards, yet he may be seen as the forerunner of the Reformation. *See Bible; Hus; Lollards.*

Bibliography. Select English Works, ed. T. Arnold, 1869-71; W. and the Lollards, G. C. Carrick, 1898; England in the Age of Wycliffe, G. M. Trevelyan, 1904; J. W., a Study of the English Church, H. B. Workman, 1926.

Wye. River of Wales and England. It rises on Plynlimon, in Montgomeryshire, and flows mainly S.E. into the estuary of the Severn just below Chepstow. Its length is 130 m. It passes through Radnorshire and Herefordshire, and for parts of its course forms the boundary between Wales and England, and between Monmouthshire and Gloucestershire. On its banks are Rhayader, Builth, Hay, Hereford, Ross, Monmouth, and Chepstow. Its tributaries include the Elan, Ithon, Lugg, and Monnow. The Wye valley is noted for its beautiful scenery. (*See Chepstow; Hereford; Symond's Yat.*) There is also a Wye in Derbyshire, a tributary of the Derwent; and one in Bucks, a tributary of the Thames.

Wye. Village of Kent, England. It is 4 m. N.E. of Ashford and has a rly. station. Here is the South-Eastern Agricultural College,

Wymondham, Norfolk. Parish church of St. Mary the Virgin and St. Thomas à Becket, which formed part of the abbey church founded in the 12th century

founded in 1894 as a constituent of the university of London. This has a large farm, laboratories, and a library, and gives instruction in all branches of agricultural work. Pop. 1,454.

Wykehamist. Name applied to a boy who is or a man who was at Winchester College, taken from

the founder William of Wykeham (*q.v.*). *Pron. Wiccām-ist.*

Wylam. Village of Northumberland, England. It is on the rly. from Carlisle to Newcastle, 8½ m. W. by S. of the latter, and is immediately S. of the Roman Wall. George Stephenson was born here.

Wyld, HENRY CECIL KENNEDY (1870-1945). British philologist. Born March 27, 1870, he went to Charterhouse and later studied abroad before entering Corpus Christi College, Oxford. From 1899 he lectured in the English language at Liverpool, becoming professor of English language and philology there in 1904. In 1920 he returned to Oxford as Merton professor of English language and literature, occupying this post until his death, Jan. 26, 1945. Wyld wrote much on philological subjects, his *History of Modern Colloquial English* (1920) being termed epoch-making. His *Universal Dictionary of the English Language* (1932) was also notable.

Wyllie, WILLIAM LIONEL (1851-1931). British painter, born in London. He first attracted attention with a marine composition, *After a Storm*, 1869, and from that time devoted himself to sea and historical pieces. He excelled in drawing craft of all kinds, and became one of the best-known marine painters of his day. His canvas, *The Thames Below London Bridge*, was bought by the Chantrey bequest for the Tate. Wyllie was elected A.R.A. in 1889, R.A. in 1907. His publications included a study of Turner, and *Sea Fights of the Great War* (with M. F. Wren). Wyllie died April 6, 1931.

Wymondham.

Market town of Norfolk, England. It stands on the rly. 10 m. S.W. of Norwich. The chief building is the church of St. Mary the Virgin, at one time the church of an abbey. With its

Normannave, Perpendicular tower and aisle, wooden roof, and rood screen, it is a magnificent building. Becket's chapel was founded in 1175 and restored 1886; it is now used for a library. There is a picturesque half-timber market cross, 1618. This town gives its name to the family of Wyndham. Pop. 5,500. *Pron. Windham.*

Wynants or Wijnants, JAN (c. 1615—c. 1680). Dutch painter. Born probably at Haarlem, where he seems to have passed the first part of his life, he removed in the 1660s to Amsterdam. His landscapes are carefully finished with fine atmospheric effects, and include figures and animals by contemporary artists. One of the founders of the Dutch school, he is said to have taught Wouwerman and A. van de Velde.

Wyndberg. Residential suburb of Cape Town, S. Africa. It is situated on the E. side of Table Mountain, 8 m. S. of the city proper, with which there is rly. connexion. It has an aerodrome. Near, at Constantia, is the government wine farm, Groot Constantia, its Dutch house dating from 1684.

Wyndham, SIR CHARLES (1837–1919). British actor. Born in Liverpool, May 23, 1837, he was the son of a doctor, and was himself educated for that profession. Having served as a surgeon on the Federal side in the American

Sir Charles Wyndham,
British actor

Civil War, he changed his name of Culverwell and took to acting, first playing in London in 1865. In 1874 began his connexion with the Criterion Theatre, where he played in a successful series of farces, and in comedies by H. A. Jones. In 1898 he left the Criterion for Wyndham's, in 1903 went to the New Theatre, and continued to appear on the stage almost until his death, Jan. 12, 1919. His most famous part was that of David Garrick. He was knighted in 1902, and his second wife was Mary Moore (q.v.), long his leading lady. His son, Howard Wyndham (1865–1947), succeeded to management of the three playhouses named, together with (Sir) Bronson Albery.

Wyndham, GEORGE (1863–1913). British politician and man of letters. Son of the Hon. Percy Wyndham and grandson of the 1st Lord Leconfield, he was born Aug. 29, 1863.

He was educated at Eton and Sandhurst, and went into the army, serving with the Coldstream Guards in Egypt in 1885. Forsaking a military

career for politics, he began as private secretary to Balfour, and in 1889 entered the commons as Unionist M.P. for Dover. In 1898 he was made under-secretary to the War office, and during 1900–05 was a secretary for Ireland well thought of for his land purchase bills. He died June 9, 1913. Wyndham wrote on Ronsard and Shakespeare, and in 1919 a volume of his *Essays in Romantic Literature* appeared. *Consult* Life and Letters, ed. J. W. Mackail and G. Wyndham, 1925.

Wyndham's Theatre. London playhouse in Charing Cross Road, W. 1. It was built for Sir Charles Wyndham, who became its first manager and director, the opening production being David Garrick, Nov. 16, 1899. The theatre, which seats 730, became noted for comedies and plays of topical interest: e.g. Mrs. Dane's Defence, 1900; Mrs. Gorrings's Necklace, 1903. Here Du Maurier appeared in A Kiss for Cinderella, 1916; Dear Brutus, 1917; and as Bulldog Drummond, 1921. Later pieces included Clive of India, 1934; George and Margaret, 1937; Quiet Wedding, 1938, and its sequel Quiet Week-End, 1941; The Years Between, 1945.

Wyntom, ANDREW OF (c. 1350–c. 1420). Scottish chronicler. A canon regular of St. Andrews, he was elected prior of S. Serf's monastery in Loch Leven, and when an old man began his chronicles at the request of Sir John of Wemyss. The Orygynale Cronykil of Scotland is a metrical history in the vernacular from mythical beginnings to 1406.

Wynyard, DIANA (b. 1906). British actress. Dorothy Isobel Cox was born in London, Jan. 16, 1906, and educated at Croydon. After making her debut by "walking on" in The Grand Duchess at the Globe Theatre, 1925, she toured for some years before scoring a success as Charlotte Brontë in Wild Decembers, 1933. Her reputation as an actress of somewhat statuesque charm was made in Sweet Aloes, 1934; meanwhile she had been starred in the Hollywood screen version of Cavalcade. Later stage appearances were in Design for Living, 1939; No Time for Comedy, 1941; Watch on the Rhine, 1942; The Wind of Heaven, 1945.

Wyoming. Mid-western state of the U.S.A. A perfect rectangle, it is bounded N. by Montana, E. by S. Dakota and Nebraska, S. by Colorado and Utah, W. by Idaho and Utah. Wyoming forms part of a great plateau (5,000–

7,000 ft.), and is traversed by branches of the Rocky Mts., culminating in Fremont Peak (13,790 ft.). The North Platte, Big Horn, Powder, and Green are the longest rivers, none of which is navigable. This is the 8th state in area, but is sparsely populated; only four towns have over 10,000 people, including Cheyenne, the capital.

The soil is for the most part arid, and agriculture, including the growing of alfalfa, sugar beet, and potatoes, has to be assisted by irrigation. Livestock is the principal source of wealth, though there are coal mines, natural gas, tin, sodium salts, and phosphate rock; and oilwells are so prosperous as to provide \$1,500,000 annually for schools, since land originally set apart to support education was found to be oil-bearing. The state has the largest elk herds in the world. It contains Yellowstone and other national parks. Communication is afforded by 1,923 m. of rlys., and there are some 50 airports.

Wyoming was the first state to give women the right to vote (1869), and had the first woman governor (1925). It sends to congress two senators and one representative. R.C.s just lead Mormons as the largest religious body. The state was admitted to the union in 1890. Area, 97,914 sq. m. Pop. 250,742. *Consult* Wyoming: Frontier State, V. Linford, 1947.

Wyoming Valley. Picturesque valley of Luzerne co., Pennsylvania, U.S.A. It extends about 23 m. along the N. branch of the Susquehanna river, and has a breadth of 3 m. Its possession was long disputed by Connecticut and Pennsylvania settlers, and on July 3, 1778, the former were attacked by a force of partisans of Great Britain and Seneca Indians and suffered defeat.

Wyss, JOHANN RUDOLF (1781–1830). Swiss author. The son of a pastor, he was born at Berne, March 13, 1781, and became professor of philosophy at the university there in 1806. He died March 31, 1830. His works include collections of Swiss folklore, but he is best known as the author of The Swiss Family Robinson (q.v.). This tale, which his father had told, was written down by the son and published in 4 vols., 1812–27, becoming a children's classic in all languages.

Wyvern. In heraldry, a two-legged dragon, with serpentine forked tail. It is the typical dragon of continental heraldry.

George Wyndham,
British politician

THE Egyptian hieroglyph most nearly corresponding to X was  representing a chair back. The later hieratic form was the first to add a cross-stroke, thus: , and the Semitic and Phoenician alphabets, adopting the letter, added others , also making the main stroke vertical . Their name for the letter was *samekh*, meaning a post. The classic Greek *xi*  was virtually the same letter with the vertical  stroke omitted. But

among several earlier Greek forms the two crossed diagonals had made their first appearance, though the relation between this form and the Semitic *samekh* is barely apparent. One theory is that the *samekh* was sometimes written , which would provide the missing link  in the chain. The crossed diagonals entered the classic Greek alphabet as *chi* (with a *k* sound), the *xi* being used for the *ks* sound. But the Romans adopted the diagonals for the *ks* sound, and developed the X

X Twenty-fourth letter of the English and twenty-third of the Latin alphabet. In form, but not in sound, it is the Greek *X* (*chi*), which answers to the German *ch* in *doch*, and the Scottish *ch* in *loch*. At the beginning of words, chiefly of Greek origin, it has the sound of *z*, e.g. *Xenophon*, *xylonite*. Its normal sound is that of *ks* in an accented syllable, as in *exit*, *excellent*, and of *gs* in an unaccented syllable as in *exert*, *exalt*. Before an unaccented vowel, with *i* or *u* following, it often has the value of *kh*, as in *anxious*, *luxury*. See Alphabet; Phonetics.

Xanten. Old town of Germany, in N. Rhine-Westphalia. On the lower Rhine, 36 m. N.N.W. of Düsseldorf, it was founded by the Romans as *Vetera Gastra*, its name being a corruption of *Ad Sanctos*. It is mentioned in the Nibelung Saga as Siegfried's native town. A Roman amphitheatre still serving as an open-air theatre, and other remainders of the pre-Christian days; a mighty cathedral, partly Romanesque, partly Gothic, and next to that of Cologne in Rhineland fame; also S. Michael's church (1472-78), the town hall (1786), and old walls, attracted many tourists to Xanten. It had enamel, cement, and wood industries. The treaty of Xanten, 1614, ended the Julich-Cleves succession conflict.

During the Second Great War the town was almost destroyed, the cathedral suffering especially. One of the last places held by the Germans W. of the Rhine, N. of Coblenz, it was captured by Somerset Light Infantry after savage fighting on March 9, 1945. From here, on March 24, British engineers built their first Bailey bridge across the Rhine under heavy German fire which set the town ablaze. After the war Xanten lay in the British zone of occupation. Pop. 5,000.

Xanthe (Turk. *Eskiche*). Town of Greece, in Thrace, lying near an inlet of the Aegean Sea, and on the rly. 28 m. N.N.E. of Kavala. After the Balkan War and the par-

tition of Turkey in 1913 it passed to Bulgaria. After the First Great War it was transferred to Greece.

Xanthic Acid OR **XANTHOGENIC ACID** ($C_2H_2O_5S_2$). Unstable oily liquid. Its crystalline potassium salt is obtained by the action of alcoholic potash on carbon disulphide and is used as a soil fumigant. Alkali cellulose when treated with carbon disulphide forms cellulose xanthate, used in making artificial silk.

Xanthine. White amorphous substance (2, 6-dihydroxypurine) belonging to the purine group, first isolated from a urinary stone. It is found in potatoes, coffee, beans, etc., but may be obtained from guanine or uric acid. Derivatives of xanthine include caffeine (1, 3, 7-trimethylxanthine), theophylline (1, 3-dimethylxanthine), and theobromine (3, 7-dimethylxanthine).

Xanthophyll. Yellow pigment. It is found associated with carotin and two kinds of chlorophyll in chloroplastids. It occurs with the former or alone in orange or yellow chromoplastids respectively. The chemical formula ($C_{40}H_{56}O_2$) assigned to it indicates the relation to carotin ($C_{40}H_{56}$).

Xanthus. Chief city of ancient Lycia, Asia Minor, situated on the river of the same name about 8 m. from the mouth. In 545 B.C. it was besieged by the Persians, and after its destruction by the Romans it fell into ruins. In modern times it has been the scene of archaeological excavations.

Xanthippé OR **XANTHIPPE** (Gr., yellow mare). Wife of Socrates (q.v.). She is said to have made his home life wretched by her quarrelsome disposition and shrewish tongue, and her name has become synonymous with virago. *Proem.* Zan-tippy.

Xavier, FRANCIS (1506-52). Spanish missionary and saint. He was born at Xavier, Navarre, April 7, 1506, and was educated in Paris. A family-proud, brilliant scholar and athlete, he at first scorned but later succumbed to the influence of Ignatius Loyola, with whom he was associated in

founding the Society of Jesus, 1534. He laboured in the hospitals of N. Italy, was ordained in 1537, founded the first Jesuit mission in India, at Goa, 1542, and visited Travancore, the Fishery Coast, Madura, Celebes, the Spice Islands, and Japan. He died of fever on the island of Sancien, near Macao, Dec. 2, 1552, while attempting to penetrate into China. Canonised in 1622, he has a festival on Dec. 3. He was the most practical of mystics, and inspired men by his life no less than by words. *See* Goa; Jesuits. *Consult* Lives, H. J. Coleridge, 1872; M. McClean, 1895; E. A. Stewart, 1917; Origin of the Jesuits, J. Brodrick, 1940. *Proem.* Span. Ha-veeairr; Eng. Zave-zer.

Xebec (Ital. *sciabecco, zambecco*). Name for a three-masted lateen-rigged trading ship. It is used only in the Mediterranean.

Xenolith (Gr. *xenos*, stranger; *lithos*, stone). In geology, a piece of country rock enclosed in an igneous intrusion. Such inclusions are generally formed by the wedging off of fragments by the molten rock as it works its way upwards. They may be chemically converted into rock of the same composition as the intruding material, or become disintegrated and assimilated by the latter. Xenoliths, known also as heathen by quarrymen, are found in many granites. They form dark patches or clots which may be deleterious to weathering properties. *See* Granite; Igneous Rocks.

Xenon (Gr., strange). Rare gas. Ranking as a chemical element, it has the symbol Xe, atomic number 54, atomic weight 131.3. Colourless, invisible, and odourless, it exists in the atmosphere as one part in 170 millions.

Xenophanes (c. 570-480 B.C.). Greek philosopher. Born at Colophon in Asia Minor, he migrated

S. Francis Xavier,
Spanish Missionary

about 540 B.C. to Elea in Italy, where he founded the Eleatic school (*q.v.*). Xenophanes attacked the old religion which represented the gods as performing disgraceful actions. *Pron.* Zenof-*faneez*.

Xenophobia (Gr. *xenos*, stranger; *phobos*, fear). Term applied to the hatred felt by some people towards a foreign country, and towards those inhabiting it. The word is now rarely used, though analogous terms, specifying the hated nation, *e.g.* Anglophobe, hater of England, continue in use.

Xenophon (c. 430-c. 354 B.C.). Greek general and historian. He came of an Athenian aristocratic

Xenophon,
Greek soldier

family, and was taught by Socrates, whose idealism he revered although by nature a man of action. He fought probably at Arginusae in 406, but, opposing the

democratic regime, joined in 401 the Greek band of adventurers enlisted by the younger Cyrus of Persia for an expedition against Artaxerxes. After Cyrus's death in battle at Cunaxa and the assassination of Greek officers by Tissaphernes, the situation of this contingent was perilous. Xenophon's force of character and abilities brought him to the leadership, and he carried out one of the greatest retreats in military history, five months' marching through largely unknown country, beset with hostile tribes, to the Bosphorus. His *Anabasis* (*q.v.*), written in the third person, tells of this epic with such attention to detail and unassuming presentation of the author's determination and good humour that it has become a classic.

Xenophon transferred his allegiance to the Spartans, fighting in Asia, then at Coronea against the Athenians in 394, being by them proclaimed traitor and banished. Settling in Elis, he gave himself up to literature and sport, but was compelled to fly after the battle of Leuctra, and made probably his last home in Corinth. After the *Anabasis*, his chief book is *Hellenica*, which carries the history of Thucydides along to 362 and is the only authority for the 50 years covered. *Memorabilia* vindicates the memory of Socrates against charges of corrupting youth. There are also treatises on domestic economy, cavalry training, and

other military subjects, and a monograph on Agesilaus of Sparta, but in these the style becomes flat and only the detail is impressive. *Consult* Works, Eng. trans. H. G. Dakyns, 1890-96; *Ancient Greek Historians*, J. B. Bury, 1909; X., *Soldier of Fortune*, L. V. Jacks, 1930. *Pron.* Zennofon.

Xeres de la Frontera. Variant spelling of the name of the town Jerez de la Frontera (*q.v.*).

Xerophthalmia. Condition of the eye resulting in blindness. As it is caused by lack of vitamin A, cod liver oil is the essential remedy. The disease was rampant during both Great Wars wherever fats were unobtainable, and barrels of oil were sent to friend and foe alike to save children from incurable blindness.

Xerxes (c. 519-465 B.C.). King of Persia, 485-465 B.C. His first task on the death of his father Darius I was to quell a revolt which had broken out in Egypt. This accomplished, he was free to complete the vast preparations which his father had been making for the conquest of Greece, and in 480 Xerxes with his army of half a million men and a mighty fleet set out from Sardis in Asia Minor. The Hellespont was crossed by a bridge of boats, and to facilitate the progress of his fleet a canal was cut through Mt. Athos. He won the naval victory of Artemisium and his army, after a temporary repulse at Thermopylae, reached Athens, but his fleet was beaten at Salamis. Xerxes made his way home with the bulk of his army, and left the government thereafter to officials, devoting himself to the harem, as mentioned in the O.T. book of Esther. He was assassinated in 465 by Artabanus, commander of his bodyguard and an aspirant to the throne. Xerxes is the hero of Handel's opera *Serse*, and sings the aria known as Handel's *largo*. *See* Greece; Persia. *Pron.* Zerx-eez.

Ximenes, or Jimenes, de Cisneros, Francisco (1436-1517). Spanish ecclesiastic and statesman,

Francisco Ximenes,
Spanish ecclesiastic

born at Torrelaguna, Castile. After studying at Salamanca, he was ordained priest and went to Rome, where he remained, 1459-65. In 1481 he became vicar-general of Sigüenza and in 1492 confessor to Queen Isabella. In 1495 he was made archbishop of Toledo. Ximenes re-

tained his power during the difficult times that followed Isabella's death in 1504, receiving the red hat in 1507 and being grand inquisitor of Castile and Leon. This ascetic Franciscan had already signalled himself by an attempt to convert the Moors in Spain when in 1509 he led a strong force to Africa and conquered Mers-el-Kebir. On the death of Ferdinand in 1516 Ximenes became regent of Castile for Charles V, but was dismissed in Sept., 1517, and died Nov. 8. Founder of Alcalá de Henares university, he was a generous patron of literature. *Consult* Cardinal X. and the Making of Spain, R. Merton, 1934. *Pron.* Hee-may-nes.

X-Rays. Rays whose existence was first discovered in 1895 by Röntgen. While investigating the passage of high-voltage electric currents through vacuum tubes (Crookes tubes) he noticed that rays were emitted which differed in properties from any known radiations. Although invisible, they caused fluorescence in certain crystals, notably the platino-cyanide of barium, and had the power of penetrating various substances opaque to light, such as wood and aluminium. The rays were stopped by the heavy metals and other dense substances. Röntgen named them X-rays to express his lack of knowledge of their nature.

There are two chief forms of apparatus for generating the high-voltage current used for X-rays: (1) the induction coil and mercury jet interrupter; (2) the high-tension transformer. There are two chief types of X-ray tube: (1) the "gas" tube; (2) the Coolidge tube. Both are vacuum tubes, but in the first a small residue of gas is left (about a millionth of an atmosphere). The electrons are usually emitted from a heated tungsten filament and accelerated by an applied H.T. voltage to strike the anode target. Most of the energy of the electrons is used in heating the anode, which has to be water-cooled, but about one p.e. is converted into X-rays.

It has been found that each chemical element has the power of emitting X-rays of a particular wavelength—under suitable stimulation. This property is governed by a simple law: the square root of the vibration-frequency of each element is proportional to the atomic number of the element. This law has made possible many remarkable discoveries about the electron (*q.v.*) and the atomic structure of the elements.

In industry X-rays are applied with success in detecting flaws in metallic castings and the like. Improved apparatus has made possible the generation of X-rays of such power that they penetrate a considerable thickness of dense substances, such as steel. The applications of X-rays to medical diagnosis are numerous, in the detection and localisation *e.g.* of metallic foreign bodies, such as bullets and needles, and objects swallowed, such as coins, metallic toys, tooth-plates; of fractures and dislocations of bones; of diseases of bones and joints; of *calculi* in the kidneys and other parts of the urinary tract; of disease of the heart and lungs.

In tuberculosis X-rays are of incalculable value in detecting the early foci of consolidation in the lungs. When a quantity of a heavy insoluble salt (usually a com-

X-Rays as detectors of foreign bodies. A door key, swallowed by a child, and lodged in the gullet, is revealed by X-ray examination. Right, an open safety-pin, also lodged in the gullet, is similarly detected

more absorbent of the X-radiations and permitting of much shorter exposure. The X-ray tube being placed some distance above the patient or object, the plate, in a light-tight envelope, is laid immediately below. Exposure time ranges from a few secs. for arm or leg joints to one or two mins. for thicker parts of the body or for the skull. By the use of higher power or by placing a fluorescing screen in contact with the coated side of the plate, which is then exposed glass-side towards the tube, instantaneous snapshots can be made. Stereoscopic methods are used to determine the exact position of the object that

than any that can be manufactured. By using a crystal as a diffraction grating (the powdered crystal sometimes being mounted on metal), a pattern can be obtained on a photographic plate which makes it possible to calculate the structure of the crystal and the wavelength of the X-rays.

Xylene or **DIMETHYLBENZENE**. Liquid hydrocarbon obtained from coal-tar and existing in three isomeric forms, *viz.* orthoxylene, metaxylene, and paraxylene. Commercial xylene contains all three, but chiefly metaxylene. Xylene is used as a solvent and in making aniline dyes.

Xylophone (Gr. *xylos*, wood; *phonē*, voice). Percussion instrument in the orchestra. It consists of 27 bars of hard wood slightly rounded on the upper surface and arranged in two rows, with resonators below. They are struck with two small wooden mallets, producing by this means a dry and clattering tinkle of sound.

X Y Z Mission. Episode in U.S. diplomatic history. In 1798 three commissioners were sent to France by John Adams to inquire into the stopping and examination by the French of U.S. ships at sea. The three French agents who met them, termed X, Y, and Z in the commissioners' report, tried un-

X-Rays. Observing the organs of a patient's chest through a fluorescent screen

pound of bismuth or barium) is swallowed by the patient, X-ray examination can be made at intervals to observe the size, shape, position, and behaviour of the parts of the digestive tract.

Repeated exposure of the skin to the action of X-rays sets up a form of dermatitis. Certain diseases of the skin, however, yield readily to X-ray treatment, and ringworm is almost universally treated by X-rays. Some success has attended X-ray treatment of cancer, particularly surface cancers. Deep penetration rays can destroy deep-lying cells without injury to the surface cells.

In the making of photographs by X-rays, the results are shadows. Extra-rapid plates commonly used in photography will serve, but it is usual to expose plates or films coated with a type of emulsion

is being photographed.

X-RAY CRYSTALLOGRAPHY. It was found that X-rays do not obey the optical laws of reflection, refraction, and diffraction, when tested under normal conditions. They continue to travel in straight lines until stopped and absorbed by some dense substance, *e.g.* a heavy metal. It was, however, discovered that the wavelength of X-rays is some 10,000 times shorter than that of light waves, and the ordinary diffraction grating is therefore much too coarse to give a spectrum. The space-lattice made up by atoms in a crystal, however, is a natural grating much finer and more regular

successfully to extort money as a preliminary condition of discussion. The issue of the report and correspondence in the U.S.A. almost led to war.

LIKE U, V, and W, the letter Y was developed from the Greek *upsilon* Υ . That is to say, it is closely related in its origin to the letter F (q.v.). The earliest form of the letter F, the Egyptian hieratic form, and the Semitic *vau* (hook) both retain, with emphasis, the two horns and the body of the original Egyptian hieroglyph representing an asp. These remain prominent

in the classic Roman Y, which had a usage derived from an uncial variant of the *upsilon*, called *psi* Ψ . The use of the letter Y for the sound of *th* in old English printed books, as in such words as "ye" for "the," arose from its resemblance to the Anglo-Saxon character P , thorn, which represented the sound. The word printed as "ye" was always pronounced "the."

Y Twenty-fifth letter of the English and twenty-fourth of the Latin alphabet, both a vowel and a consonant. In form it corresponds to the Greek Υ (upsilon), and in Latin is found only in Greek words. As a consonant it has almost the same value as *ee*, as may be heard in the pronunciation of *yes, yet*. As a vowel, *y* may be phonetically compared to *i*, its values being long *i*, the diphthong, not the Italian sound, and short *i*, as in *by, fly, synonym, system*. As a general rule, at the end of a word, when preceded by a consonant, it has a shortened sound, as in *colony*. Its only compound is *ye*, which has the value of long *i*, as in *bye, rye*. See Alphabet; Phonetics.

Yablonoi. Range of mts. in Siberia, U.S.S.R. Beginning E. of Lake Baikal, they trend from S.W. to N.E., and are continued by the Stanovoi mts. They are a northern prolongation of the Mongolian system. Greatest alt. is about 8,000 ft. Yablonoi means apple mts.

Yachting (Du. *jacht*). Navigation of a small vessel for pleasure, under either sail or motor or both. The word is believed to have been

introduced into the English language in 1660 with the presentation by the Dutch of the *yacht* Mary to Charles II. Although Pepys in his diary records that the shipbuilder Phineas Pett built a number of yachts at Deptford, notably the Bezan, Cleveland, and Fubbs, to sail against the king's Mary, yacht sailing as a sport was not fully recognized until the water club of Cork was founded in 1720. Many 18th century yachts were rigged as brigs or topsail schooners, and even the smaller cutters followed almost exactly the style of the revenue cutters, carrying guns and strong crews to man them. Some yachts notable for their speed were taken into the navy as dispatch or "fly" boats, the brig *Waterwitch*, built by Whites of Cowes in 1834, being a well-known example.

Until the cutter *Arrow* was built of iron in 1848, yachts were built of the finest oak and pitch pine and teak. By the 1890s many yachts were "composite" built—with wood planking over steel frames (or ribs). In the 20th century some yachts were built almost en-

tirely of steel. In this the Dutch yacht yards led the way as supplies of local oak failed, building yachts of steel down to the smallest sizes of craft.

As a result of the sweeping victory of the schooner *America* when she out sailed 16 English yachts at Cowes and took the Queen's cup home with her in 1851, the trophy became known as the America's Cup. Presented to the New York yacht club, it has attracted many challenges from the U.K. Lord Dunraven, Sir Thomas Lipton, and T. O. M. Sopwith sailed specially built yachts to the U.S.A., but without success, the last races in this series being sailed between Vanderbilt's *Ranger* and Sopwith's *Endeavour II* in 1937. Prohibitive costs of such vessels have made further challenges with this so-called "J" class impossible.

So that yachts of widely differing size, hull forms, and rig could race together at regattas, attempts to evolve satisfactory measurement rules for handicapping were made as early as 1846. The difficulty in handicapping sailing yachts is that almost every yacht behaves differ-

Yachting. 1. A Diesel-driven yacht, the *Sans Peur*. 2. *Shamrock IV* in dry dock, showing the fine keel of the racing yacht. 3. Steam yacht *Iolanda*, when first built the largest in the world. 4. The racing yacht *Kaylena*

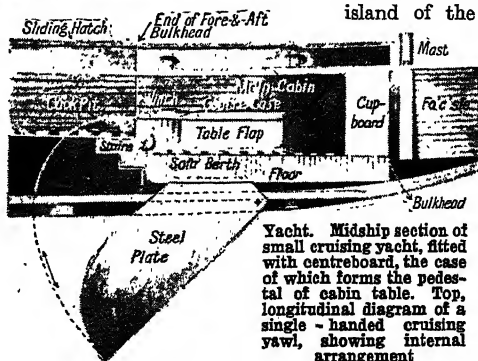

ently from the others in varying wind strengths and sea conditions. A yacht that may easily outsail a larger vessel in light breezes may be soundly beaten by the other if the wind pipes up.

The old tonnage rule introduced by the Royal Thames Yacht Club in 1854 as a rough-and-ready method of rating yachts continued in use in the U.K. as the Thames measurement yacht tonnage by which yachts are classed in size. For rating purposes, this was followed in 1880 by the length and sail area rule, which penalised beam to such an extent that during the next decade yachts became excessively narrow of beam. So that these "plank-on-edge" craft, as they were called, could carry their great spread of canvas, excessively deep and heavy lead keels were bolted on their bottoms, as a result of which they were named "lead mines." Various improvements in the rating rules produced a more healthy type, the finest and best loved of which was perhaps the cutter *Britannia* built by G. L. Watson in 1893 for Edward, prince of Wales.

The great days of racing between the big cutters and schooners, when kings and merchant princes vied for a cup and magnificent steam yachts lay at anchor in Cowes Roads, did not survive the First Great War. Attempts were made to revive the big class with *Britannia* under a new rig, Davis's great schooner *Westward*, Lipton's last *Shamrock* (the fifth), *Astra*, and *Velsheda*. But rising costs made yachting on such a scale beyond the reach of all but a very few rich men, and with the sinking of the old *Britannia* at King George V's behest in 1936, the class became defunct.

The Second Great War caused the loss on active service of many old steam and motor yachts, and a complete change in the character of yachting followed. Yachts with paid crews almost disappeared and the small cruising yacht, with auxiliary motor or small full-power motor cruiser, handled by man and wife or a family, became popular. Many old yachts were turned into floating homes. Other

Yacht. Midship section of small cruising yacht, fitted with centreboard, the case of which forms the pedestal of cabin table. Top, longitudinal diagram of a single-handed cruising yawl, showing internal arrangement

quite small vessels of 10 tons and under made long voyages around the coast or about the world. Racing in the smallest boats gained greatly in popularity. There are more than 140 different classes of small racing boats in the British Isles alone. Chief races are for (a) one-design classes, in which all the boats of a class are built exactly alike to a single design, and only the skill of helmsmen or crew is presumed to be the winning factor; (b) restricted classes, in which boats are built within certain limits of length, beam, weight, sail plan, etc., and in which the best design is likely to win; (c) handicap classes, in which yachts of various sizes and types race on rating allowance, and the first one home does not necessarily win the race on "corrected" time; (d) the many dinghy classes, both national and international. The total number of all these small boats runs into several thousands in England alone.

Ocean racing—or coastal and off-shore racing—sponsored by the Royal Ocean racing club, was inaugurated in 1926; by 1948 races to Spain, Bermuda, the Netherlands, the Baltic, Ireland, and across Channel attracted some 120 British yachts of sizes varying from 24 ft. to 55 ft. on the waterline.

Maurice Griffiths, A.I.N.A.,
Editor, *Yachting Monthly*

Yacuiba. Town of Bolivia. On the Argentine frontier, in Tarija dept., it is an old settlement and trading point for the Gran Chaco. There is a rly. to Embarcación and Buenos Aires; a line to Villa Montes was nearly completed in 1948.

Yahoo. Degraded human servant of the horses inhabiting the island of the Houyhnhnms, described in the fourth voyage of Swift's *Gulliver*. See *Gulliver's Travels*.

Yak (*Bos grunniens*). Ungulate mammal, belonging to the ox family, and found only in Tibet and in parts of China. It is recognized by long hair which grows from the limbs, tail, and under parts

and often reaches the ground. It occurs both wild and domesticated, and in the former state its colour is dark brown. The yak is a massive and heavy animal, with short legs and a long narrow head. The bulls carry large cylindrical

Yak. Domesticated shaggy-haired bull of Tibet
Gambier Bolton, F.R.S.

horns. Fine male specimens stand nearly 6 ft. high at the shoulders and weigh well over 1,000 lb. Yaks occur wild in the most rugged and inaccessible districts, and always at high elevations, as they are intolerant of heat. They have long been domesticated by the Tibetans, who use them as beasts of burden as well as for food.

Yakima. City of Washington, U.S.A., the co. seat of Yakima co. It is on the river of the same name, 155 m. S.E. of Seattle, and is served by the Northern Pacific and other rlys. In the vicinity half a million acres formerly desert now yield, by irrigation, grain, hops, and fruit. Incorporated 1886 as North Yakima, the city dropped the first word in 1917. Pop. 27,221.

Yakut. People of Turkic stock in the Lena basin, E. Siberia, R.S.F.S.R. Numbering 250,000, they are dark, flat-nosed, narrow-eyed, betraying Tungus contact. Cattle-breeders, hunters, and traders, they are also skilled artisans.

Yakutsk. Autonomous republic of the R.S.F.S.R. It extends from the Stanovoi mts. in lat. 55° N. to the Arctic Circle. The principal industries are hunting and gold mining. Fields are worked by a Soviet trust or individual prospectors; silver and lead-bearing ores and coal are also worked. One of the severest climates on earth and lack of rlys. have retarded development, but by 1948 the Angara-Lena rly. was nearing completion. Principal rivers are the Lena, Vilini, and Aldan. The capital, Yakutsk, stands 2 m. from the Lena, here 9 to 11 m. wide. A fort was established at Yakutsk in 1632, and trade developed in mammoth ivory, reindeer hides, and cattle. An air service connects the town with Irkutsk. Other places are Verkhoyansk (*q.v.*), Olekminsk, and Shigansk. Pop. 400,544.

Yale, ELIHU (1648-1721). Anglo-Indian official, benefactor of Yale university (*v.t.*). Born at

Elihu Yale, Anglo-Indian official

Boston, Lincolns, April 5, 1648, he went to India on behalf of the E. India co. in 1672, became in 1687 governor of Fort George, and amassed a large fortune, which he spent liberally on philanthropic and educational schemes. A governor of the co. from 1699, he died in England, July 8, 1721.

Yale University. One of the leading American universities in size, wealth, and reputation. It was founded in 1701 by a group of Congregational ministers at Saybrook, Conn., as a collegiate school. When removed in 1718 to New Haven, in the same state, it was renamed Yale College, in honour of Elihu Yale (*v.s.*), who had sent it a cargo of gifts. In 1887 it acquired the status of a university. It includes separate schools of medicine, divinity, law, etc., some of which are greatly indebted to private benefactors; thus its scientific dept., founded in 1847 with meagre resources, was developed in 1861 into the Sheffield scientific school, named after Joseph Sheffield (1795-1882),

whose gifts totalled more than a million dollars.

In the 1920s and 1930s the university was changed almost beyond recognition by benefactions from J. W. Sterling (1844-1918) and E. S. Harkness (1874-1940). Sterling doubled Yale's resources by leaving to it his residuary estate for the erection of new buildings and the foundation of professorships, fellowships, and

Yale University. Modern buildings of the university including the Payne Whitney gymnasium

scholarships. He is commemorated in the Sterling memorial library, a magnificent and technically up-to-date Gothic structure, containing more than 2,500,000 volumes, where 2,000 readers can be seated at one time. Harkness's gift of \$10,000,000 found embodiment in a tower and quadrangles, which, after the Oxford and Cambridge pattern, involved a radical departure from American tradition and a complete reorganization of the life of the undergraduates. These are divided, except in their freshman year, among eleven colleges. The staff of each college consists of a master and ten fellows, who supervise social life and supplement lectures by tutorial classes.

Older buildings are the Peabody Museum (*q.v.*) and the art gallery founded in 1832. Yale University Press issues, in addition to books, the Yale Review, one of the chief American quarterlies. An offshoot of the university was Yale-in-China, situated at Changsha. In 1947 Yale had 8,734 students, and a teaching staff of 1,012.

Yallowin. Town of Victoria, Australia, the centre of a state-owned electric power system with a capacity of 370,000 kW., supplying areas throughout the state, Pop. 3,600.

Yalta. Town of the R.S.F.S.R. Situated on the S.E. coast of the Crimea, 35 m. E. of Sevastopol and at the foot of the Yaila mts., it has long been a favourite watering place on account of its agreeable

and equable climate; mean annual temp. is 56.5° F. The tsars had a summer resort here, the Livadia palace. Captured by the Germans in the Second Great War, Nov. 8, 1941, Yalta was retaken by Yermenko April 16, 1944. Here in 1945 was held the Yalta Conference (*v.t.*).

Yalta Conference. Name commonly given to a meeting, officially called the Crimea conference, held

Feb. 4-12, 1945, in the Livadia palace, Yalta, between Winston Churchill, prime minister of the U.K., J. V. Stalin, premier of the U.S.S.R., and F. D. Roosevelt, president of the U.S.A., with their military and technical advisers. Plans were made for the final stages of the campaign in Germany, and

subsequent occupation of that country, whose administration and control were to be co-ordinated through a central control commission consisting of the supreme commanders of the three powers and having its h.q. in Berlin; France was to be invited to take a zone of occupation and participate in the control commission [France accepted]. The calling of a conference of the United Nations to meet at San Francisco on April 25, to prepare a charter along the lines proposed at Dumbarton Oaks, was also agreed to, China and France to be consulted immediately and invited to sponsor invitations jointly with the U.K., the U.S.A., and Russia [China accepted; France refused]. Other decisions published at the time stipulated joint three-power assistance to the liberated peoples of Europe in rebuilding their economic and political life; and the setting up of a new "Polish provisional govt. of national unity" [in place of the exiled Polish govt. in London] and the establishment of the Curzon line, with minor digressions in favour of Poland, as that country's eastern border. Decisions not published were contained in an agreement of Feb. 11 which bound Russia to declare war on Japan two or three months after the surrender of Germany [this surrender was ratified May 8; Russia declared war on Japan Aug. 8]; and promised Russia, after the defeat of Japan, S. (Japanese) Sakhalin and the

Kurile Is., the internationalisation of the port of Dairen, re-establishment of Port Arthur as a Russian base, and Russo-Chinese control of the Chinese Eastern and S. Manchuria rlys. *Consult* Roosevelt and the Russians: The Yalta Conference, E. R. Stettinius, 1949.

Yalu. River of E. Asia. Rising in the Pei-shan, it follows a winding S.W. course between Manchuria and Korea, whose frontier it forms, to the Bay of Korea. It is about 300 m. long and navigable to Wiju (Gishu).

The battle of the Yalu was fought at the mouth of the river, Sept. 17, 1894, between Japanese and Chinese squadrons, the first action on a large scale in which breech-loading guns, quick-firers, and torpedoes were all employed. The Chinese were hampered by shortage of ammunition. The action lasted over four hours, at the end of which three of the Chinese vessels had been sunk, while a fourth had been beached owing to her injuries. Japanese loss was 90 killed and 208 wounded. The forcing of the passage of the Yalu by the Japanese in 1904 was one of the earliest land operations in the Russo-Japanese War.

Yam (*Dioscorea alata*). Perennial climbing herb of the family Dioscoreaceae. Though native to

Yam. Tubers and heart-shaped leaves

the East Indies and the Philippines, it is extensively cultivated in the West Indies. It has large, fleshy, tuberous roots, long twining stems, and alternate, heart-shaped leaves. The tubers are rich in starch, and are used in the same ways as the potato. There are several other species in different tropical countries, with similar characters and uses, e.g. the Chinese yam (*D. batatas*), in which the tubers are of great length and more or less spindle-shaped.

Yama (Sanskrit, twin). In Hindu religion, god of the infernal regions and judge of the dead. The souls of the good journey to him by delightful ways, while the souls of the bad go by dismal paths.

Yamagata. ARITOMO, PRINCE (1838-1922). Japanese soldier and statesman. Born of Samurai family at Chosu, he took part in the over-

throw of the Tokugawa shogunate, became war minister in 1873, and helped to suppress the Satsuma revolt of 1877. Created count in 1884 he took charge of home affairs next year. He led the 1st army corps in the war against China, 1894-95, at the close of which he became inspector-general of the army and a marquess. He was field-marshal by 1896, and in the war against Russia was Oyama's chief of staff. Twice premier, 1889 and 1898, Yamagata wielded enormous influence as the outstanding Conservative statesman of his country. He was made a prince in 1907, having already received the British O.M. He died Feb. 1, 1922.

Yamashita, TOMOYUKI (ex. 1946). Japanese soldier. A student of German military tactics, he planned and carried out the Japanese attack on Malaya in Dec., 1941, receiving the surrender of the British commander in Singapore, Lt.-Gen. A. R. Percival, on Feb. 15, 1942. By the rapidity of this conquest he earned the nickname Tiger of Malaya. On March 9 he assumed command of Japanese forces in the Philippines, and on May 6 forced Lt.-Gen. Jonathan Wainwright, then in command of U.S. and Filipino troops, to surrender on Corregidor. When Gen. MacArthur returned to the Philippines, Oct. 20, 1944, Yamashita was driven from Leyte by Dec. 25, and defeated in Luzon between Feb. 4 and 24, 1945. With his remaining troops he took to the mts., surrendering unconditionally with his men at Baguio on Sept. 3 to Gen. Wainwright, sent specially from Tokyo. Brought before an American court martial in Manila on Oct. 8, charged with responsibility for atrocities including mass murder of civilians and the death by shooting, burning, or bayoneting of 141 out of 150 captured U.S. soldiers on Palawan, he was found guilty and condemned on Dec. 7 to death by hanging. Appeals were rejected by the U.S. supreme court (by six to two), by Gen. MacArthur, and by President Truman, and on Feb. 23, 1946, Yamashita was hanged near Los Banos in a field where Japanese had massacred captured American troops. *See* Tokyo Trials.

Yamethin. Dist. and town of Burma, in Meiktila division. The dist. lies W. of the Shan states, and is crossed by the Rangoon-Mandalay rly. Its area is 4,255 sq. m. The chief crops are rice and oilseeds. The town is on the rly. and the terminus of a main road to

Meiktila and Myingyan. In Japanese occupation from 1942, the town was liberated by British and Indian troops on April 14, 1945. Pop., dist., 463,189; town, 13,200.

Yancey, WILLIAM LOWNDES (1814-63). American politician, born Aug. 10, 1814. He entered the legislature of his native Georgia in 1841 and three years later was sent to the house of representatives. Chief opponent of the abolition of slavery, he helped to put together the Alabama Platform, calling for government support for slave owners. He played a big part in the movement among the Democrats which led to the secession of Southern states in 1860. A Confederate senator from 1862, he died July 27, 1863.

Yang-tse-kiang. The principal river of China and the third (or fourth) longest in the world, its 3,400-m. course coming after those of the Amazon, Nile, (and Mississippi, if these be counted as one). Taking its rise near the centre of the Tibetan plateau, it flows somewhat uncertainly S.E. to the Yunnan tableland, after which it turns N.N.E. So far its local name is Chinsha (river of golden sand), or Ulan-muran among the Tibetans. The next part of its course is marked not only by great loops and bends, but by dangerous rapids where it runs swiftly over a rocky bed. This part provides some of the most superb scenery in China in the Yang-tee gorges, stretching from Szechwan into Hupeh. Starting at something like 10,000 ft. above sea level, the river falls steadily at the rate of some eight feet per mile till it reaches the Hupeh plains.

From this point it is navigable as far as its mouth by river steamers; hence the enormous population living along its banks, and the merchants in large cities clustering at its mouth. For the last 1,200 m. the flow is reasonably slow and unimpeded by currents. As a means of transport, running roughly through the centre of China, the Yang-tee is of first importance. Ocean-going vessels of 6,000 tons can go as far as Hankow, 620 m. from the coast. Although the whole river is known to Europeans as Yang-tee (kiang meaning river), Chinese call it Ch'ang Chiang (long river), Ta Chiang (great river), or simply "the river."

Yankee. Word of uncertain origin used in America for a citizen of New England, and in Europe for a white native of the U.S.A. The name was applied in the War of Independence by the British to

Yang-tse-Kiang. Map showing the area drained by the Chinese river and its tributaries. See p. 8639

the Americans, in the Civil War by the Confederates to the Union soldiers (often shortened to "Yank"), and by the South to the North. A theory commonly advanced is that the word is a corruption of English, or Anglais, as used by the Massachusetts Indians.

Yankee Doodle. American tune dating from about the middle of the 18th century, its origin being obscure. One theory is that verses were written by an Englishman to deride the fantastically garbed colonial troops, and later adopted by Americans as a marching song. There are many versions. The earliest known example is in Aird's selection of airs for the fife, violin, or German flute (c. 1775). Words, more or less nonsensical in general, are fitted to it, such as:

Yankee Doodle came to town
On a little pony.
He stuck a feather in his cap,
And called it Macaroni.
Yankee Doodle, Doodle do,
Yankee Doodle Dandy;
All the lasses are so smart,
And sweet as sugar-candy.

Yannina. Greek form of the name of the Greek town described under the Serbo-Croat and more familiar spelling Janina. In Turkish the same place is Yaniya.

Yaoundé or YAUNDE. Capital of French Cameroons. It is about 200 m. by rly. E. of the seaport of Douala, stands on an affluent of the Nyong river, and is the centre of a system of roads. Pop. 50,000.

Yap. Detached island of the Caroline group, Pacific Ocean. The Carolines raised their flag here, and possessed Yap 1899-1914. Under the treaty of Versailles, 1919, it passed under mandate to Japan. It became an important cable centre with direct communication to Guam, Shanghai, and the N.E.I. The island is rocky, and produces bamboo and cocoa. Pop. 6,650.

Immediately after the treaty was signed friction arose between

the U.S.A. and Japan, as the cable from Yap was American-owned, but Japan claimed the right to manage it. A settlement was embodied in a treaty, signed Feb. 11, 1922, by which the U.S.A. obtained free access to the island to operate the cables free from Japanese control or censorship; also the right of residence and ownership of real and personal property. Contrary to the terms of her mandate, Japan fortified Yap, turning it into an air and naval base which she used in the Second Great War for her invasions of the Netherlands E. Indies, New Guinea, and the Solomons. When the Allies began their island-hopping campaign, they by-passed Yap, but they raided it from the air. The Japanese surrendered in the Carolines, Sept. 2, 1945. See Caroline Islands.

Yapp, SIR ARTHUR KEYSALL (1869-1936). British organizer. Born at Orleton, Herefordshire, March 12, 1869, he was educated at Hereford, and trained in business in Leominster, of whose Y.M.C.A. he became hon. sec. in 1890. Secretary of the Y.M.C.A. council for Lancashire, 1897, he was general secretary of the Manchester branch 1907-12, after which he became secretary of the national Y.M.C.A. council, and in 1929 deputy president. During the First Great War he became a public figure through his appointment as director of food economy, 1917-18, and he was knighted in the earlier year. He wrote *The Adventure of Youth*, 1929, and died Nov. 5, 1936. See Young Men's Christian Association.

Yapurá or JAPURÁ. River of S. America, in Colombia and Brazil. It rises in the Eastern Cordillera of the Andes in Colombia, where it is known as the Caquetá, and flows E. by S.; it picks up the Apaporis enters Brazil, and continues E.,

then S., to effect a junction with the Amazon in the neighbourhood of Teffe. Its length is about 1,450 m., of which 600 m. are navigable.

Yarborough, EARL OF. British title borne since 1837 by the family of Pelham. Charles Anderson-Pelham, a landowner in Yorks and Lincs, and an M.P. from 1768, was in 1794 created a baron. His son Charles

(1781-1846) was made an earl at the accession of Victoria, 1837. From him the title descended to Marcus, 6th earl (b. June 30, 1893), in 1948. The earl's seat is Brocklesby Park, Lincs.

A yarborough at whist or bridge is a hand containing no card above a nine; so named because a former earl of Yarborough used to offer 1,000 to one against a player being dealt such a hand. He stood to gain, for the true odds are given as 1,827 to one against.

Yard. British standard linear measure. It is the length between the centres of two gold studs on an iridio-platinum bar, copies of which are kept in the houses of parliament, the standards office, the Royal Observatory, and elsewhere. The yard is divided into three feet or 36 inches. It was originally a natural measure of length, usually the length of the arm of the king. The cloth yard is divided into four quarters or sixteen nails. See Ell; Weights and Measures.

Yardangs. In geology, rock ridges carved by wind action under desert conditions. They form parallel ribs up to 20 ft. high, fantastically carved in cross-section and separated by sandy hollows.

Yardley, NORMAN WALTER DRANSFIELD (b. 1915). English cricketer. Born March 19, 1915, at Barnsley, he went to St. Peter's, York, and St. John's College, Cambridge, winning his blue for cricket 1935 and captaining the XI in his fourth year. From 1936 he played for Yorks as an amateur, becoming captain 1947. Meanwhile, after playing for England in the tours to S. Africa 1938-39 and to Australia (as dep.-captain) 1946-47, he led the England side at home in the 1947 test matches

Great Yarmouth, Norfolk. Air view of the town, beach, and Marine Parade

v. S. Africa, those of 1948 v. Australia, and in three of those v. W. Indies, 1950. A forcing mid-innings batsman, he was also a medium-paced bowler effective in breaking stubborn partnerships. He published *Cricket Campaigns*, 1950.

Yare. River of Norfolk, England. It rises near Cranworth, and flowing E. past Norwich enters the sea at Yarmouth. It is about 60 m. long. Its chief tributaries are the Wensum, the Waveney, and the Bure.

Yarkand. Town of Sinkiang, China. Situated on the Yarkand, it is about 100 m. S.E. of Kashgar. It manufactures silken, felt, and cotton goods, carpets, and dyes. Early in the 17th century it was the capital of an independent kingdom. Pop. 118,562.

Yarkand-Daria. River of Central Asia. It rises in the Karakoram, in Kashmir, and flows W., N., and N.E. across the plain of Yarkand, W. China. After receiving various tributaries it takes the name of Tarim (*q.v.*).

Yarmouth, GREAT. Co. bor., seaport, and holiday resort of Norfolk, England. Standing near the mouth of the Yare, it is 19 m. E. of Norwich, and is served by rlys. Characteristic of Yarmouth are its Rows, lanes often but a few feet wide, running between the river

and the sea. Fragments of the 14th century town walls still remain, and there are some interesting old houses, including the town hall, and the Star Hotel, a Tudor

building which contains a Nelson room and memorials of that admiral. There is a harbour on the Yare, with extensive quays on which are a large fish market and shipbuilding yards. The principal trade is in fish, especially the autumn catch of herrings. There are also engineering works, timber yards, and silk and food processing industries. On the Denes, S. of the town, is the Nelson monument, a column 144 ft. high. There are a marine parade, two piers, sporting facilities, and a splendid stretch of sand which extends as far as Gorleston, part of the borough. Yarmouth is the name of a co. constituency. Pop. est. 48,697.

On Nov. 3, 1914, and on April 25, 1916, German battle cruisers bombarded Yarmouth, and on Jan. 14, 1918, torpedo-boat destroyers fired 50 shells into the town, four persons being killed. Raids in the Second Great War destroyed the parish church of S. Nicholas, dating from 1101 and among the biggest in England; and the 14th century toll house.

Yarmouth. Seaport of the Isle of Wight, England. Standing on the Solent, at the W. end of the island, and at the mouth of the river Yar, it has a station on the island rly. and steamer connexion with Lympington.

The chief buildings are the town hall, the church, and the castle, but Yarmouth is mainly a yachting centre. Until 1883 it had its own mayor and corporation, and it sent two members to parliament from 1584 to 1832. It was burned by the French in 1377 and 1544. Pop. 823.

Yarmouth. Town and seaport of Nova Scotia, Canada. It is 215 m. S.W. of Halifax, in Yarmouth co., on a good harbour at the S.W. end of the peninsula, and is a station on the C.P.R. and the C.N.R. From here steamers go to Boston and Halifax. The chief industries are in fish products and exporting lumber. Pop. 7,790.

Yarn. Textile thread, of great length, suitable for making into cloth by weaving or knitting. Yarn is produced by the processes of spinning, and consists of numbers of individual fibres held together by twisting them round one another. There are two types: nett, in which individual fibres are very long and continuous; and spun, in which fibres are short and overlapping. The only nett yarns are silk and the man-made rayons, nylon, etc.; wool, cotton, and linen are of necessity spun.

The fineness of yarn is indicated by a counts number. For nett yarns this is the denier, or weight in grams of 9,000 metres. For spun yarns it is usually the number of hanks of a standard length which weigh 1 lb., but woollen, worsted, cotton, linen, etc., yarns each have their different standard length of hank. The product of one unit of the spinning machine is termed a singles yarn; two or more of these twisted together form a ply, or doubled yarn; two or more ply yarns twisted together form a cabled yarn.

Other designations may be added, indicating type of raw fibre used; method of spinning (mule or ring); scoured, bleached,

Great Yarmouth arms

Yarmouth, Isle of Wight. The town square, showing the church and Town Hall (right)

or dyed; whether for warp, weft, or knitting, or a special type such as crêpe. Fancy yarns are made by plying together singles of different materials, or different counts and colours, or by using singles containing deliberate irregularities. *See* Counts; Lisle Thread; Spinning; Weaving.

Yaroslav OR YAROSLAVL. Town of the R.S.F.S.R., capital of Yaroslavl region. It lies on the right bank of the Volga, where the Kotorost enters it, 174 m. by rly. N.E. of Moscow. Founded by Yaroslao the White in 1024, it has in the Uspinski cathedral a building started in 1215, rebuilt, 1646-48; other churches date from the 15th and 17th centuries. The chief town of a principality 1218-1471, it then fell to Moscow. A place of some 70,000 pop. with cotton and linen mills, flour mills, and tobacco factories at the time of the Revolution, it was developed under the Soviet regime as an engineering and chemical-making centre, pop. in 1939 being 298,000. It suffered some damage in the civil conflict in 1918, but remained outside the battle area throughout the Second Great War. The name Jaroslaw (*q.v.*) of a town in Poland is sometimes spelt Yaroslav.

Yarra Yarra. River of Victoria, Australia. Flowing W., it discharges into Port Phillip and is navigable for large vessels to Melbourne. Its length is 100 m.

Yarrow (*Achillea millefolium*). Perennial herb of the family Compositae, native of Europe, N. and W. Asia, and N. America. A common weed in British pastures, and closely related to the sneezewort (*q.v.*), it differs in the long leaves being cut into fine segments, featherwise, and in the flower-heads being smaller, but more numerous.

Yarrow. River of Selkirkshire, Scotland. It rises above St. Mary's Loch (*q.v.*) and flows thence E.N.E. to the Ettrick Water, which it joins near Selkirk. Only 14 m. long, it is known for its historic and literary associations and for the beautiful scenery through which it flows. On its banks are the ruins of a castle of the Douglases, Dryhope Tower, and Newark Castle. In verse the Yarrow has been immortalised by the Border ballads and by Hogg and Wordsworth.

Yarrow, SIR ALFRED FERNANDEZ (1842-1932). British engineer. Born Jan. 13, 1842, he was educated at University College School. He founded in 1866 the firm of Yarrow and Hadley, shipbuilders

and engineers, at Poplar, London, where he specialised in high-speed vessels, particularly torpedo-boats and destroyers, craft of shallow draught, and the Yarrow boiler now generally adopted in the navies of the world. In 1906 the works of Yarrow and co. were removed to Scotstoun, Glasgow, and later a branch was opened at Vancouver. Yarrow was created a baronet in 1916, and died Jan. 24, 1932.

Sir Alfred Yarrow,
British engineer

Yasghulami. Language of the Galcha sub-group of the Iranian branch of Aryan speech. It is spoken in the Yasghulam or Yazdum valley, between the Roshan and Darwaz hill tracts, Uzbek S.S.R. The language was unknown until a short vocabulary, collected by Stein in 1915, showed that this dialect has preserved in isolation early Aryan characteristics.

Yashmak. The veil sometimes worn by Mahomedan women in Egypt, and formerly in Turkey, when in public. Triangular in shape and about a yard long, it covers the face below the eyes.

Yataghan. A Turkish short sword or long knife, with a double curved blade running to a point and a handle without a guard. The back of a yataghan is much straighter than the cutting edge. The weapon is common among Mahomedan peoples.

Yates, DORNFORD. Pseudonym of Cecil William Mercer (b. 1885), British novelist. Born Aug. 7, 1885, he was educated at Harrow and University College, Oxford; was called to the bar at the Middle Temple in 1909; and served in both Great Wars. His tales were either slightly farcical or full of adventure, and the Berry series became popular with a wide public, starting with *Berry and Co.* Other novels included *The Brother of Daphne*, *The Courts of Idleness*, *Valerie French*, *Blood Royal*, *Fire Below*, *Red in the Morning*.

Dornford Yates,
British novelist

Yates, EDMUND HODGSON (1831-94). British journalist. Born in Edinburgh,

July 3, 1831, he held an appointment in the G.P.O., 1847-72. He began journalistic work as a contributor of verses and theatrical criticism to *The Court Journal* in 1852; and was dramatic critic and reviewer on *The Daily News*, 1854-60. As editor of *Town Talk*, 1858, he wrote an article on Thackeray which led the latter to insist on his resignation from the Garrick Club; it was Dickens's support of Yates over this dispute which led to the prolonged estrangement of Dickens and Thackeray. Yates became acting editor of *Temple Bar*, 1860; sole editor, 1863. He edited *Tinsley's Magazine*, 1867-74; was European representative of *The New York Herald*, 1873; and founded a society paper, *The World*, 1874. He founded and edited *Time*, a monthly, 1879-83. Yates produced novels, among which *Black Sheep* was dramatised; also *Recollections and Experiences*, 2 vols., 1884. He died suddenly in the Savoy Hotel, May 20, 1894.

Yatton. Village of Somerset, England. It is a rly. junction lying 8 m. N. of Axbridge. Here is a splendid church with many E.E. and Perp. features. One of the oldest pieces of embroidery in the county is preserved here. Pop. 2,280.

Yawl. A racing yawl sailing close to the wind

Yawl. Name for a two-masted craft. The mainmast is tall, and carries several sails; the mizzenmast is short, and carries only one small sail, which, projecting over the stern, helps to make steering easy. *See* Reefing illus.; Ship.

Yawning (A.-S. *geonian, gánian*). Deep involuntary inspiration associated with stretching of the muscles. It is due to an effort of nature to correct over-venosity of the blood resulting from fatigue.

Yaws. Another name for the tropical disease *Framboesia* (q.v.).

Yazd. Variant spelling of *Yezd* (q.v.), the name of a prov. in central Persia and its capital.

Yazidi. This Iraqi sect of devil-worshippers is also known as *Yezidi* and so described.

Yeaddon. Part of the urban dist. of Aireborough, in the W. Riding of Yorks., England. Yeaddon, which is 7 m. N.W. of Leeds, has a woollen industry, and the joint municipal airport for Leeds and Bradford.

Yeames, WILLIAM FREDERICK (1835-1918). British artist. Born at Taganrog, Russia, where his father was

W. F. Yeames,
British artist

British consul, he studied art in Florence and London, where he was associated with Calderon, Marks, and others in the St. John's Wood school. Made A.R.A. in 1866 and R.A. in 1878. Yeames taught in the academy school and was its librarian; also curator of the Painted Hall, Greenwich Hospital. Some of his dramatic representations from history secured an enormous popularity, e.g. *Amy Robsart*; *When Did You Last See Your Father?*; *The Toast of the Kit-Cat Club*. He died May 3, 1918. Consult *Art and Anecdote*, M. H. S. Smith, 1927.

Year. Period of time. A number of different years are recognized. The sidereal year is 365 days, 6 hours, 9 minutes, 9 seconds, and is the actual period taken by the earth to make one complete revolution in its orbit. The anomalistic year, the interval between two successive passages of perihelion by the earth, is 365 days, 6 hours, 13 minutes, 53 seconds. The tropical year is 365 days, 5 hours, 48 mins., 46 secs., the time taken by the earth to pass from any point in the ecliptic to the same point again.

The tropical year is that of the calendar, and is divided into 12 months, each separately described. Extra hours and minutes over 365 days are taken into account by the addition of one day in every fourth year, with the exception of such century years as are not

divisible by 400. Jews and Mahomedans use a lunar year. The Jewish normal year consists of 354 days, and to make up the difference between that and the solar year, an embolistic year of 384 days is introduced periodically according to complicated rules. The number of these days may be increased or decreased by one if certain festivals fall within the period. The Mahomedan year is 354 days, so that the beginning of year recedes through the seasons in about 33 years. See *Calendar*.

Year Book. Book of reference containing facts, statistics, etc., and published annually. The name is also used for the series of English law reports from the time of Edward II to that of Henry VIII. See *Almanac*; *Annuals*.

Yearsley, ANN (1756-1806). English poet. Of humble parentage, the "Bristol milkwoman" was befriended by Hannah More, who helped her to bring out in 1784 a volume of verses. Longer poems appeared at intervals on such topics as the slave trade and the executions of royalty in the French Revolution. A tragedy, *Earl Goodwin*, was played at Bath and Bristol in 1789. The *Royal Captives*, 1795, was a romance about the Man in the Iron Mask. Mrs. Yearsley, who died at Melksham, May 8, 1806, was praised by Horace Walpole and Southey, and called by Miss Seward "a miracle."

Yeast. Class of fungi of the genus *Saccharomyces*. They have the power of setting up alcoholic fermentation in sugar, the latter being broken up in the process into alcohol and carbon dioxide. Among the chief varieties of yeast are *S. cerevisiae*, used in making beer, and *S. ellipsoideus*, in wine. *S. mycoderma* is the so-called vinegar plant. If a small quantity of yeast is introduced into a fermentable liquid, the yeast cells increase and the liquid actively ferments. For the growth of the plant a suitable temperature is necessary—about blood heat—and the presence of nitrogenous and mineral matter. Fermentation may easily be induced by exposure of a suitable liquid in the warm atmosphere of a brewery, where the air is full of minute dust-like yeast spores.

The action of yeast is due to certain enzymes present in the cells. Fermentation can be brought about by the juice of the cells in the absence of the living organism. The fermenting liquid is covered with a frothy mass, known as top yeast, which is compressed and used by bakers. Yeast settling at the bot-

tom of the vessel is known as bottom yeast. Commercial dried yeast contains a considerable addition of starch. Yeast is an important source of vitamins. See *Fermentation*; *Vitamins*.

Yeast. Novel by Charles Kingsley, first published in *Fraser's Magazine* in 1848. It has a rural setting and is a passionate denunciation of the condition of British agricultural labourers at that time, particularly of the insanitary state of their homes—the heroine dies of typhus contracted while visiting cottages on her father's estate. It was intended to rouse landowners to realization of their duties to those who lived on their estates.

Yeats, JACK BUTLER (b. 1871). Irish painter. Brother of W. B. Yeats, he was educated privately and taught painting by his father. With great vitality and boisterous humour, he depicted scenes of Irish landscape and life; his colour and method of presentation were highly individual. Yeats is represented in the Tate, Birmingham, Dundee, and many Irish galleries. Governor of the national gallery in Dublin, he published *Life in the West of Ireland*, 1921; *Sailing, Sailing Swiftly*, 1933; *The Charmed Life*, 1938; *The Careless Flower*, 1947.

Yeats, WILLIAM BUTLER (1865-1939). Irish poet and writer. He was an artist's son, born at Sandymount near Dublin, June 13, 1865. His upbringing was largely in co. Sligo, whose place names occur throughout his early verse, and where he was later to reside, on the island of Innisfree in Lough Gill. During 1895-1919 he was mostly living off Woburn Place in London. He died Jan. 28, 1939, at Roquebrune on the French Riviera; and in 1948 his remains were brought back to Sligo and laid, according to his prophecy, in Drumcliffe churchyard.

First poetic efforts appeared in 1889, a long narrative, *The Wanderings of Ossin*, and short pieces collected as *Crossways*. There followed quickly a first verse play, *The Countess Cathleen*; a volume of essays, *The Celtic Twilight*; and a one-act drama, *The Land of Heart's Desire*, which is still acted. Yeats, a familiar of Huxley and Morris, and about to contribute to the *Yellow Book*, divided his time between verse and prose, drama and essay. With Lady Gregory he was in 1899 an inaugurator of the Irish literary theatre, soon to establish itself in Dublin as the Abbey Theatre with Yeats a director. The dreamy though often

magnificent poetry in his own work, such as *Deirdre*, did not suffice to stem the tide of theatrical realism,

William Butler Yeats. Left, as a young man; right, in later life

and more material success attended his plays in prose, e.g. *Cathleen ni Houlihan*; *The Hour-Glass*. Meanwhile *The Wind Among the Reeds*, a volume which some lovers of Yeats call their favourite, was making his name at the turn of the century for the most persuasive voice from the "Celtic fringe."

It is customary to speak of the earlier and the later Yeats; certainly, if the loveliness of the earlier poetry is at times overloaded with imagery, this tendency was completely reversed in the search for an austerity of style at the risk of obscuring the message. *Responsibilities*, 1914, is perhaps the collection which bridges the two phases; it also draws on national themes. There is enduring work in *The Wild Swans at Coole*, 1919; *The Tower*, 1928 (which contains *Sailing to Byzantium*); *The Winding Stair*, 1929. As mysticism grew more profound and symbolism more personal, some spontaneity of emotion may have vanished, yet his output in the 1930s stamped Yeats as a creative genius, ready to absorb new theories and explore spiritual worlds, mixing, if he could, theology, Platonism, and Irish mythology. He never lost his command of the phrase that falls like a hammer or quietly steals the breath; and has probably struck off more jewels in eight or fewer lines than any writer in English since Landor (one of his models).

In the theatre he was an experimenter to the end. Four Plays for Dancers, 1921, and *The Words Upon the Window-Pane*, 1930, were based on the unrealistic drama known in Japan. *Purgatory*, another play, seems to have been his last work. Criticism was represented by such volumes as *Ideas of Good and Evil*, 1903; *Plays and Controversies*, 1923. Yeats helped as a young man to edit Blake; and in age made for the Abbey Theatre translations of Sophocles. *Reveries over Childhood and Youth* came

out in 1915; *The Trembling of the Veil*, 1922, and *Dramatis Personae*, 1936, were autobiographical.

The potency of Yeats in the literary revival of his country was recognized by his being made a senator when the Free State was founded, and awarded in 1923 the Nobel prize for literature. A tremendous talker, he was something of a dictator on subject matter, but nobody questioned his supremacy. "We were the last romantics," he claims "—chose for theme traditional sanctity and loveliness." Incomparably the most lofty and idealistic Irish poet, he may come to occupy a place among the rarest circle of all. The fullest study is by J. Hone, 1943; consult also *Some Memories of W. B. Yeats*, J. Masefield, 1941; *Towards a Mythology*, P. Ure, 1947. *Pron. Yates*.

Yeats-Brown, FRANCIS (1886–1944). British author. Born Aug. 15, 1886, at Genoa, son of the British consul-general, he went from Harrow to Sandhurst. Commissioned in the cavalry in 1905, he joined his regt. on the N.W. Frontier. During the First Great War he served in France and Mesopotamia (Iraq), being a prisoner of the Turks 1915–18. His first book, *Caught by the Turks* (1919), gave a vivid description of his experiences. He retired from the army in 1925 and was for three years assistant editor of *The Spectator*. In 1930 he published *Bengal Lancer*, a semi-autobiographical volume, and an unusual mixture of mysticism and militarism. He then wrote *Golden Horn*, 1932; *Dogs of War*, 1934, an answer to pacifists; *Yoga Explained*, 1937; *Indian Pageant*, 1942. Yeats-Brown died Dec. 19, 1944.

Francis Yeats-Brown, British author

Yecia. Town of Spain, in the prov. of Murcia. It stands on the W. slope of the Monte Castillo, 17½ m. by rly. W. of Villena and 44 m. N. of Murcia. It was important in Roman times. In the vicinity are vestiges of Roman and Sarcenic dwellings. There is a trade in wine, oil, fruit, and esparto. Pop. 25,300.

Yedo. Historic name, in use until 1868, for Tokyo (*q.v.*).

Yeffren or **IEFFREN**. Town in Tripolitania. Situated 60 m. S.S.W. of Tripoli on a caravan route, it is the capital of the surrounding region, and was captured by the

Italians, March 27, 1913. The pop. consists of Arabs and Berbers.

Yell. Island and parish of the Shetland Islands, Scotland. It is 25 m. N. of Lerwick, and is separated from the mainland by Yell Sound. The island is 17 m. from N. to S. and varies in breadth from 2 to 6 m. The surface, barren and bleak, rises in parts to over 600 ft. Pop. 2,300. See Shetland Islands.

Yell, COLLEGE. Kind of battle-cry or war-whoop used by American college students to encourage their own teams in football matches or other athletic encounters. It consists of the rhythmical shouting of a number of words or syllables, usually including the name of the college itself. Typical examples are: Rah rah rah, rah rah rah, rah rah rah, Harvard; Rah rah rah, rah rah rah, rah rah rah, Yale; Ray ray ray, tiger tiger tiger, sis sis sis, boom boom boom, ah ah ah, Princeton Princeton Princeton; Cornell, I yell yell yell, Cornell. A difference between the yells of Harvard and Yale is the length of time taken to give them: Harvard's yell is long and deep, whereas Yale's is quick and sharp. In several instances the college name is spelt out, as in C-o-l-u-m-b-i-a, ra ra ra, C-o-l-u-m-b-i-a.

Yellala. Falls on the Congo river, in Belgian Congo. About 25 m. above Matadi, they consist of a succession of rapids which here block the river to navigation.

Yellow Book, *THE*. Illustrated British quarterly, of which 13 vols. were issued, 1894–97. Published by John Lane, and edited by Henry Harland (*q.v.*), it was intended to provide a medium for writers and artists who were not in sympathy with the more conventional forms of expression, and was therefore the "highbrow" magazine of its day, making no concession to popular appeal. Its name has become a symbol for that mildly shocking and highly self-conscious, if somewhat ineffectual, style in creative art which characterised the period known as *fin-de-siècle*. The taunt of decadence levelled against *The Yellow Book* was probably due first to the remarkable drawings by Aubrey Beardsley, and secondly to the reaction against the theory of "art for art's sake" which followed the trial and imprisonment of Oscar Wilde. Max Beerbohm was a frequent contributor, and early stories by Arnold Bennett and H. G. Wells were printed in *The Yellow Book*.

Yellow Fever. Acute non-contagious fever of several types, occurring in endemic form in the

monkeys and human inhabitants of the coastal forests of Mexico and Central S. America, on the W. coast of Africa, etc., and epidemic in the towns near by. The disease is caused by a filtrable virus and spread by a species of mosquito (*Aedes aegypti*). Disinfection with D.D.T. of its breeding places lessens the incidence of the fever.

Symptoms generally appear about seven days after infection has occurred. There is a rise of temperature to 103° F. or more, with sensations of chilliness, severe headache, pain in the back and limbs, and increase in the pulse rate. After two to four days the temperature falls, the pains become less, and in some cases the patient steadily improves. More often, after a few hours' remission, the temperature again rises and jaundice appears, the yellow tint of the skin gradually increasing. This symptom has given the disease its name. In some cases the symptoms decrease in three or four days and the patient gradually recovers. In others the jaundice becomes deeper, followed by coma and death. Mortality is usually estimated at 10 to 25 p.c. for the U.S.A., and 45 to 80 p.c. in West Africa. Serum offers a temporary protection, the modified virus used as a vaccine giving immunity for some years. The disease being established, the only treatment is good nursing.

Yellowhammer (*Emberiza citrinella*). Species of bunting,

Yellowhammer.
Species of bunting
W. S. Berridge, F.Z.S.

common in Great Britain and N. Europe. The head, neck, and under parts are bright yellow, while the upper parts are reddish-brown. It occurs chiefly on commons and waste ground, and feeds upon insects during summer and upon seeds in winter. See Eggs: colour plate.

Yellowhead. Pass in the Rocky Mts., Canada. It is on the borders of Alberta and British Columbia, W. of Jasper Park, and was discovered in 1858. See Rocky Mts.

Yellow Journalism. Term originating in the U.S.A. and denoting newspapers of a sensational and reckless character. It first came into vogue during the 1890s, when Pulitzer's New York World and W. R. Hearst's New York

Journal competed with each other to secure the larger circulation. At that time it had special reference to attempts of the popular press to whip up opinion in favour of war with Spain. The term is believed to have been suggested by an experiment in the New York World in the new art of colour printing, in which a child in a yellow dress (the Yellow Kid) was the central figure in a series of cartoons.

Yellow Peril. Term used for the danger to the white man anticipated from the settlement of persons of the so-called yellow races, i.e. Chinese and Japanese, in lands belonging to the white man. The danger rests upon the differences in the standard of life between the two races, and the greater fecun-

Mts. in Wyoming, and flows N.W. to the Yellowstone Lake, thence over the Great Falls, and through the Grand Cañon. Entering Montana, it bends E. and finally turns N.E. to join the Missouri just across the frontier of N. Dakota. Its principal affluent is the Big Horn, to the confluence with which it is navigable. Its length exceeds 1,000 m.

Yellowstone Park. Government reservation of the U.S.A. Occupying the N.W. corner of Wyoming and small adjoining portions of Montana and Idaho, it covers an area of 3,350 sq. m. and was opened to the public in 1872 as a national park with game reserve. It consists mainly of a plateau relieved by mountain groups and has a general elevation of about 8,000 ft., the loftiest

Yellowstone Park. American national park and game reserve, famous for its hot springs and volcanic scenery

dity of the yellow one. Eventual supremacy of the yellow man was prophesied by C. H. Pearson in National Life and Character, 1893.

Yellow River. The Chinese call this river Hwang-ho (q.v.).

Yellow Sea (Chinese Hwang-hai). Arm of the Pacific Ocean, lying between Manchuria on the N., China on the W., and Korea on the E. It washes the shores of the Chinese provs. of Hopei, Shantung, and Kiangsu, and the Manchurian S. coast, and communicates on the S. with the Eastern Sea. The N. portion embraces the gulfs of Korea, Liautung, and Chihli, and the most prominent projections into it are the peninsulas of Liautung and Shantung. The river Hwang-ho brings down enormous quantities of yellow mud, and from this the sea receives its name. It is a shallow expanse of water, nowhere exceeding 300 ft. in depth. Its maximum width is 400 m. and its shortest is 115 m., between Korea and Shantung.

Yellowstone. River of the U.S.A. The largest tributary of the Missouri river, it rises in the Rocky

summits, most of them of volcanic character, reaching between 10,000 and 12,000 ft. Within the reserve are over 3,000 hot springs and several magnificent geysers, some throwing water to a height of 250 ft. The Grand Geyser in the Firehole basin is regarded as the most majestic in the world. Dazzlingly coloured terraces have resulted from eruptions of geyser water. Roaming in the park are elk, moose, bear, and antelope. Near its centre is Yellowstone Lake, an irregular body of water, 7,745 ft. alt., with a greatest length of 20 m. and an extreme breadth of 15 m. Other water expanses are the Shoshone, Heart, and Lewis lakes.

The Yellowstone river, which enters the lake at the S. end and issues from the N. end, is precipitated over cliffs forming two beautiful falls, the first 112 ft. high, and the second, $\frac{1}{2}$ m. farther on, 300 ft. high, and traverses the Grand Cañon, a gorge about 20 m. long, with a perpendicular height of 1,200 ft. To the S. and E. of the park is a timber preserve covering

nearly 2,000 sq. m., which was added in 1891. The region was partially explored in 1805; in 1869 it was surveyed, and two years later a thorough exploration was carried out. See Geyser.

Yellow Wood (*Zanthoxylum*). Genus of prickly shrubs and trees of the family Rutaceae. They are natives of tropical and subtropical regions. They have alternate leaves broken up into three or more leaflets. Small flowers are white or greenish, in clusters, and fruits are in most species aromatic, with a peppery pungency. The wood is yellow, and used for cabinet work, walking sticks, etc. *Z. americanum* is called the toothache tree from its fruits and bark being used as a remedy for that trouble. *Z. veneficum*, an Australian species, is so named because its bark contains a poisonous principle.

Yellow Wood. Alternative name for fustic, a yellow dyestuff, obtained from *Rhus cotinus* and *Morus tinctoria*. See Fustic.

Yembo, YANBO, OR YANBU. Seaport of the Hejaz, Arabia. On the Red Sea, it lies about 130 m. S.W. of Medina, of which it is the shipping centre, ranking commercially next after Jeddah. During the First Great War it was captured from the Turks in 1916 by the Hejaz army, in cooperation with the British fleet.

Yemen. Kingdom of Arabia. The Arabia Felix of the ancients, Yemen means "the land on the right hand" (of Syria). It lies in the S.W. corner of Arabia and is bounded W. by the Red Sea, N. by the Hejaz, E. by the Arabian Desert, and S. by Aden. The highlands and central plateau are the most fertile part of Arabia and produce extensive crops of wheat, barley, millet, coffee, and oats.

Until the First Great War, Yemen formed part of the Turkish empire and was divided into the vilayets of Hodeida, Sana, and Taiz. In 1918 Yemen was proclaimed an independent kingdom under an imam who was the head of the Zeidi sect of the Shiite branch of the Islamic faith. Soon after the setting up of the new kingdom, the imam of Yemen occupied the Tehama coast lands between S. Hodeida and Sheikh Said, together with the territory of the Shafai sect of Sunni Muslims bordering the Aden protectorate.

Between 1920 and 1928, Yemen made a number of encroachments on the Aden protectorate, to which the imam laid claim on historical grounds. The imam

was eventually ejected from the Dhala district by British air action, and in 1934 withdrew from the protectorate territories as a condition of a treaty of friendship between Yemen and Great Britain. Italy had a major share in the development of Yemen and supplied the country with technical material and personnel. In 1937 Yemen and Italy signed a 25-year treaty of friendship, whereby Yemen recognized Italy's conquest of Abyssinia.

During the Second Great War, Yemen was benevolently neutral towards the Allies and enjoyed considerable prosperity supplying agricultural products to the Middle East armies. The kingdom was a constituent of the Arab League created on March 22, 1945, and was admitted a member of the United Nations in Aug. 1947. In 1946 she was granted a credit of £200,000 by the U.S.A. for the purchase of surplus stores in the Middle East.

On Feb. 17, 1948, the imam Yahya Muhammad Hamid Ud Din and three of his sons were assassinated at the instigation of Abdulla al Wazir, head of one of the leading families of Yemen. Abdulla al Wazir proclaimed himself imam but, unable to maintain his position, was executed by loyalist forces; Seif-el-Islam Ahmed, eldest son of Yahya, succeeding.

Yemen has an area of 74,000 sq. m. and an est. pop. of 3,500,000. Its trade, most of which passes through the port of Hodeida (pop. 30,000) to Massawa and Aden, thence to Europe, exceeds that of the remainder of Arabia. The principal export has been coffee, but the discovery of considerable oil deposits in 1947 seemed likely to alter that. The capital, Sana, has a pop. of 40,000. See Arabia.

Yen. Japanese monetary unit. It is coined in normal times in 5, 10, and 20 yen gold pieces. The

Yen. Both sides of the silver coin formerly current, half actual diameter

single yen is not coined, though a one-yen silver piece was formerly current. The yen is divided into 100 sen or 1,000 rin. When the gold standard was adopted, its nominal value was 2s. 0½d.

Yenangyaung. Town of Burma, on the Irawadi, 120 m. N.N.W. of Prome. It is the centre of the chief Burmese oilfield, to which it gives its name. Before the Second Great War, Yenangyaung wells produced 8,000 barrels daily, but destruction of installations by the British army during the Japanese advance reduced production to a maximum of 800 barrels daily throughout the Japanese occupation. Yenangyaung was recovered April 21, 1945, by the British 23rd corps in its advance down the Irawadi towards Rangoon, the whole oilfield being cleared by April 25. See Burma Campaign of 1941-45.

Yenikale, STRAIT OF. Alternative name for the Russian strait of Kerch (q.v.).

Yenisei. A river of central Siberia, R.S.F.S.R. One of the longest rivers in the world, it rises in the Tuva region, crosses Siberia from S. to N., and flows into the Arctic Ocean by the estuary formed by its mouth (Bay of Yenisei). It is at least 2,600 m. in length, and is navigable throughout most of its course during the summer. On or near the banks are Krasnoyarsk, Yeniseisk, and Turukhansk.

Yeol. Name of several English rivers. There are two in Somerset: one, also called the Ivel, rises in Dorset near Milborne Port, and flows 24 m. generally W. past Yeovil to join the Parret at Langport; the other, about 16 m. long, runs N.W. from near Harptree to Woodspring Bay in the Bristol Channel, 4 m. S.E. of Weston-super-Mare. The name is also given to streams near Exeter and near Barnstaple, Devon.

Yeola. Town of India, in Nasik dist., Bombay state. It is 13 m. S.S.E. of Manmad junction on the branch rly. line through Ahmadnagar. Silks, cottons, and gold and silver wire and thread are manufactured.

Yeoman. English word originally meaning a countryman, and later used for a class of those who cultivate the soil. In Chaucer the yeomen are retainers, but later appear to have become small freeholders, the intermediate class between the gentry and the labourers. The word was also used for farmers, those who rented land. In the 18th century the landholding yeomen declined in number. The older meaning of retainer still exists in yeoman of the guard, yeoman usher of the black rod, and other titles of officials of the royal household.

Yeomanry. Cavalry regiments of the British territorial army. They are so called because at their original formation they were recruited and commanded on a county basis, farmers and yeomen serving in the ranks and gentry as officers. All alike provided their own horses, uniform, accoutrements, and saddlery, the govt. issuing only swords and pistols. Officers and men were unpaid, except on embodiment, when they received army rates. Liability was for home service in the event of invasion or civil riot, but units could not be compelled to serve outside their own counties.

Although a few yeomanry troops were raised in 1761, they were not organized on a regimental basis until 1794, when Carnot was making preparations for a French invasion. In 1796 the Provisional Cavalry Act was passed whereby every owner of ten horses was required to find and equip one cavalryman for the militia. Six months later an amendment permitting the substitution of yeomanry for provisional cavalry in the county quotas stimulated the formation of voluntary units. At the close of the Napoleonic Wars the yeomanry had 44,000 officers and men, and the limitation as to place of service in Great Britain had been abolished. Failure by the French to stage a major invasion prevented all but one regt. from going on active service; the exception was the Pembroke Yeomanry, embodied to deal with a small raid on Fishguard in 1797.

All but some 50 yeomanry regts. were disbanded, and those that remained were seldom embodied except during the weavers' and Chartist riots. At the outbreak of the S. African War, strength had fallen to 10,000 officers and men. Of these, 3,000 volunteered to go to the Cape in newly-formed battalions of Imperial Yeomanry armed and organized as mounted infantry. They proved so useful in the war of movement against the Boers that further units were raised, and at the end of the war 32,000 men were on active service trained by original yeomanry regts.

In 1902 the Yeomanry was reorganized on the lines of the regular cavalry and its establishment was fixed at 55 regts., each of four squadrons. In 1907 all units were absorbed by the new Territorial force, regts. continuing to be administered on a county basis. In the First Great War the yeomanry mobilised; its first unit in action was the Oxfordshire Yeomanry,

which accompanied the R.N. div. to Antwerp. In 1915 four regts. were drafted to France and brigaded with regular cavalry, and nine were formed into an improvised dismounted force for Gallipoli. Only in Palestine was opportunity offered for the use of large horsed formations. Fourteen yeomanry regts. served with Allenby, and El Mughar, executed entirely by yeomanry, was the last great cavalry battle. In 1917, 18 regts. were dismounted to form the 74th infantry, the broken spur div., which served in Palestine, Macedonia, France, and Flanders.

When the Territorial force was reorganized as the Territorial army in 1921, only the 14 senior yeomanry regts. were retained as horsed units, the remaining 41 being converted into artillery bdes., armoured car cos., and engineer and signal units. At the outbreak of the Second Great War, most of them went to France with the B.E.F. The Lothians and Border Horse were attached to the 51st

Yeovil, Somerset. Parish church of St. John the Baptist

armoured div. and became the first British mechanised unit in action; retreating to St. Valéry, it formed the rearguard on the perimeter and was the last British unit fighting in 1940 in France. All horsed yeomanry regts. went to Palestine with the 1st cavalry div. and were mechanised, joining the 8th army in 1942, to serve throughout the N. Africa and Italy campaigns. The Wiltshire Yeomanry was first to break through at Alamain; a squadron of the Lothians and Border Horse was first into Tunis; and in Italy the Derbyshire Yeomanry was the first British unit to reach the Po. In 1947 all mechanised cavalry yeomanry units were affiliated to regular cavalry and Royal Tank corps regts. as part of the Royal Armoured corps. The North Somerset Yeomanry is the reconnaissance regt. of the 16th airborne div. (T.A.).

Yeomen of the Guard. Small military corps, officially styled the King's Body Guard of the Yeomen of the Guard. See Beefeater.

Yeomen of the Guard, THE, OR THE MERRYMAN AND HIS MAID. Comic opera in 2 acts by Gilbert, with music by Sullivan. It was produced Oct. 3, 1888, at the Savoy Theatre, London, where it ran for 423 performances. It is the only one of the Gilbert and Sullivan operas to have a "natural" as opposed to a fantastic plot; also the only one to end on a note of sadness. The setting is the Tower of London, the period is Tudor.

Yeovil. Mun. bor. and market town, giving its name to a co. constituency, of Somerset, England. On the Yeo, or Ivel, 127 m. W.S.W. of London, it is a rly junction. The chief building is the church of S. John the Baptist, a Perpendicular edifice with an old crypt. The town, noted for gloves, is also an agricultural centre. It became a borough in the 13th century, and its chief officer was

the port-reeve, until a new charter in 1853. Important fairs were held here, and the glove making was introduced about 1560. Pop. (estimated) 19,000.

Yerkes, CHARLES TYSON (1837-1905). American financier, born at Philadelphia, June 25, 1837. His great

career as a financier began about 1873, and in a few years he had acquired a national reputation by his development of the street rly. system of Philadelphia. In 1881 he turned his attention to Chicago, where he ultimately controlled the street and elevated rly. In London at the beginning of the 20th century he greatly developed the tube systems. A philanthropist, Yerkes endowed the observatory named after him at Chicago university in 1892. He died Dec. 29, 1905.

Yermak (d. 1584). A Cossack chief. He flourished in the reign of Ivan the Terrible and conquered a large part of Siberia. At the instigation of Stroganov he crossed the Urals in 1586, routed Khan Kuchum, and seized his domains. Yermak was drowned in the Irtysh.

Yes Tor. Mt. of Devon, England. On Dartmoor, 3 m. S. of Okehampton, it is 2,028 ft. high.

Yevpatoria. Crimean seaport better known outside Russia as Eupatoria (*q.v.*).

Yew (*Taxus*). Genus of evergreen trees, of the Coniferae family. The common yew (*T. baccata*) is a native of Great Britain, and other species have been introduced from America and Japan at various dates. They may be planted in any deep, rich, moist soil in shrubberies, on lawns, or with a view to forming hedges, but care should be taken with regard to position, as the foliage is poisonous to cattle. The yew is of very slow growth, and, while of stately spreading habit, rarely attains to a height of more than 40 ft. Some specimens are said to be over two thousand years old. The Irish yew is ornamental. See Botany; Conifer; Forestry; Topiary.

Yezd or **YAZD.** Town of Persia, capital of a prov. of the same name. It is about 170 m. E.S.E. of Ispahan, lies in a fertile oasis, and is to be served by rly. It manufactures silks, cotton, felt, and pottery. Yezd is the seat of the Guebers, who are Zoroastrians. Pop. 60,000. The prov., wedge-shaped, is bounded E. by Khorassan and Kerman, S. by Fars, N.W. by Ispahan and Samnan Damghan.

Yezidi or **YAZIDI.** Religious community of Iraq and the neighbouring Turkish Kurdistan and Armenia. Known as devil-worshippers, they number about 17,000. They speak a Kurdish dialect and are illiterate, but industrious, chaste, cleanly, and courteous. Based on the worship of good and evil, their religion may be a survival of Zoroastrianism, but has assimilated Christian, Muslim, and Magian customs; e.g. they both baptize and circumcise the males, and may take seven wives. Their chief ritual object is a peacock of yellow copper, carried once a year through the villages, all prostrating themselves. The devil, whose name is not pronounced, is venerated in the expectation of reward when he regains paradise. Priesthood is in six ranks, all inherited.

Yezo. Large island of Japan also known as Hokkaido (*q.v.*).

Yggdrasil. In Norse mythology, the world tree, also called Odin's ash, Odin's steed, and the gallows tree. Its branches spread above the heavens, and in them animals lived. See Jotun; Mimir.

Yiddish (Ger. *jüdisch*, Jewish). Name given to a dialect or dialects spoken by the Jews in various parts of the world. The Jews who migrated from Germany to the east of Europe in the 14th century took with them their mother-tongue. This, with an admixture of Hebrew and foreign words, gradually developed into a peculiar jargon. After the return to the west in the 17th century this jargon held its ground, and forms the basis of a popular dialect of German-Jewish in all parts of Europe and

Yew. Foliage of the common yew, *Taxus baccata*

also in America. It is estimated that 70 p.c. of the words in Yiddish are of German origin, 20 p.c. Hebrew, and 10 p.c. from other languages. Yiddish is much spoken in the East End of London, where newspapers are printed in it with Hebrew characters, and theatrical performances given. See Jews.

Yield Point and Stress. A phenomenon characteristic of some metals, notably mild steel, and shown up on the graph indicating strain variation with stress. At a certain point above the elastic limit a slight increment of stress gives rise to a sudden appreciable increase in strain. This point of sudden increase is the yield point and the corresponding stress the yield stress.

Ying Yang. In Chinese philosophy, the beginning of everything. From Tai-Cie are generated the two elements, Ying and Yang, which form the combination by which the formation of all material things is rendered possible. Ying means the female or the negative element, and Yang the male or positive element. In order to divide the Tai-Cie circle into Ying and Yang, so that the two elements would be equal to each other in magnitude, and that one would jut into the other to show their intimate relationship, a curved line is drawn in the circle. The symbol is widely used in China to mean good luck or prosperity. It is the emblem of Korea (*q.v.*).

Ymir. In Norse mythology, the hero of a crude cosmogonic myth. According to the Prose Edda he was a giant formed by the thawing ice of Ginnungagap, the yawning gap or primeval chaos. From his body were made the heavens and the earth.

Ymuiden or **IJMUIDEN.** Town of the Netherlands, in the prov. of

N. Holland. It is situated behind the dunes at the W. end of the North Sea Canal which connects it with Amsterdam, 15 m. to the E.S.E. Near are the locks which protect the canal when the tide is at the flood. Quays and other shipping facilities make the place a growing outpost for Amsterdam. The fishery is valuable, and there are ice and chemical works. Pop., with Velsen, 46,004.

Yochow. Former treaty port of China, in Hunan prov. It is situated at the point where the Tung Ting Lake connects with the Yang-tse, and was opened to foreign trade in 1899. Pop. 25,612.

Yodel. Primitive form of song in falsetto. It originated in Switzerland and is probably derived from the Ranz des Vaches, a melody played on the Alpen horn, for calling the cattle home. Yodelling is free in metre and rhythm and generally uses the restricted scale of the natural harmonics of such instruments as the Alpen horn.

-Yoga (Skt., effort). One of the six orthodox systems of Hindu philosophy. It teaches the suppression of all fleshly desires and self-concentration to attain unity with God. Its followers (yogis) practise asceticism and various penances believed to confer supernatural powers. They worship Siva and their chief sanctuary is at Benares. F. Yeats-Brown's Bengal Lancer was a popular book about the dabbling of a Western mind in Yoga philosophy. Consult Yoga for You, C. Bragdon, 1948.

Yokohama. Principal seaport of Japan. It stands on the E. coast of Honshu Island, on Tokyo Bay, 15 m. S. by W. of Tokyo, with which it is connected by the oldest rly. line in the country. Yokohama superseded Kanagawa, which it includes, as a treaty port in 1859. Among its chief buildings were the custom house, court house, and prefectural offices. Its commodious harbour, protected by massive breakwaters, was well equipped. Silk was one of the chief articles of export, others being coal, copper, and tea. The principal imports were cotton and woollen goods, sugar, petroleum, and metal ware. Pop. (1940) 968,091.

In 1854 Commodore Perry landed here. The port grew as the foreshore was reclaimed from the sea; water-works were completed in 1887, and new harbour works in 1896. On Sept. 1, 1923, Yokohama was almost destroyed by an earthquake. An object of severe

Yokohama, Japan. General view of the seaport showing damage caused by air raids during the Second Great War

U.S. air attack during the Second Great War—3,200 tons of fire bombs were dropped on it in one day alone, May 28, 1945—Yokohama had more than 130,000 houses destroyed and some 700,000 homeless at the end of that war.

Yokosuka. One of the chief naval stations of Japan. It stands on the W. side of Tokyo Bay, on Honshu Island, 15 m. S. of Yokohama. Pop. 88,750.

Yola. One of the northern provs. of Nigeria. It is bounded E. by British and French Cameroons, and is traversed from E. to W. by the Benue river. Yola, the capital city, is situated on that river. Area, 11,600 sq. m.

Yom Kippur. Jewish day of atonement. The most solemn occasion in the year, it falls on the 10th day of Tishri, the first month of the ecclesiastical and seventh of the civil calendar. See Atonement, Day of.

Yonge, CHARLOTTE MARY (1823-1901). A British author. She was born Aug. 11, 1823,

Charlotte Yonge,
British author

at Otterbourne, Hants, where she lived all her life and died March 24, 1901. The inculcation of the High Church faith is the dominating note of her long series of novels, mostly historical, the first to achieve a striking success being *The Heir of Redclyffe*, 1853. Other well-known romances are *The Daisy Chain*, *Heartsease*, *The Dove in the Eagle's Nest* (placed in medieval Germany), *The Little Duke*. She wrote history of a simple character, including *Kings of England*, 1848; *Parallel History of France and England*, 1871; the deservedly popular *Book of Golden Deeds*, 1864; and the fascinating *History of Christian Names*, 1863.

Consult C. M. Y., G. Battiscombe, 5th ed. 1945; Victorian Best-Seller, M. Mare and A. Percival, 1948. *Pron.* Yung.

Yonkers. City of New York, U.S.A., in Westchester co. A residential suburb of New York city, which it adjoins on the N., it is served by the New York Central and Hudson River rly. Settled in 1650, Yonkers was chartered as a city in 1872. There are rly. yards, and manufactures include headgear, carpets, wire, and patent medicines. Pop. 142,598, fourth biggest in the state.

Yonne. River of France, an affluent of the Seine. It rises in the heights of Morvan and flows generally N., across Nièvre and Yonne depts., for about 150 m. Its chief tributary is the Armançon. See Auxerre.

Yonne. Department of France. Formed of parts of the provs. of Champagne, Burgundy, and Orléanais, it lies adjacent to the depts. of Côte-d'Or, Nièvre, Loiret, Seine-et-Marne, and Aube. The surface is varied; in the N.E. lies part of the chalky Champagne Poulleuse, S. of which lies the Forest of Othe; the Terre Plaine in the S.E. is a rich cereal-growing dist. The chief river is the Yonne, with its tributaries, the Cure, Serein, Ravillon, Vanne, etc. Mainly agricultural, the dept. produces wheat, oats, barley, etc., and the vineyards are rich and of good quality, Chablis being one of the wine centres. There are foundries, breweries, and quarries, and manufactures of leather, hosiery, tools, glass, and sugar. The capital is Auxerre. Area, 2,892 sq. m. Pop. 266,014.

Yorck von Wartenburg, HANS DAVID LUDWIG, COUNT (1759-1830). Prussian soldier. Born at Potsdam, Sept. 26, 1759, he entered the army as a boy, in 1779 was dismissed for disobedience, and served the Dutch in the East Indies. About 1786 he was reinstated

in the Prussian army, and in 1812 led the contingent sent to the Grand Army which invaded Russia. But Yorck hated the French alliance, and his influence led to the Tauroggen convention with the tsar and a declaration of war against Napoleon. Yorck led troops in the fighting of 1814, his greatest success being at Wartenburg. Made a count and a field-marshal, he died March 4, 1830.

Yoredale Series. Group of sedimentary rocks of lower Carboniferous age, found in N. and W. Yorks and Westmorland, England. They consist of a rhythmic succession of shale, sandstone, and limestone repeated several times. Hard beds form steep scarp slopes and hill spurs; in valleys they often form waterfalls. Yoredale is an alternative for Uredale, the valley of the Ure, but both names are less common than Wensleydale (*q.v.*) except in this geological context.

Yorick. In Shakespeare's *Hamlet* (Act. V, scene 1), the one-time jester whose skull Hamlet picks up in the grave-digging scene, saying, "Alas, poor Yorick! I knew him, Horatio; a fellow of infinite jest, of most excellent fancy." It has been hazarded that the passage contains a tribute to Richard Tarleton, the comedian (d. 1588). Sterne introduces himself with a sermon as Parson Yorick into *Tristram Shandy*; hence Yorick has become applied to that author.

York. City and mun. bor. and co. town of Yorks, England. It stands in the Ainsty between the

York arms

three Ridings, at the confluence of the Ouse and the Foss, 188 m. N.N.W. of London, and is served by main rlys. (see *Points illus.*) The industries include iron founding, rly. carriage building, printing, milling, making glass bottles, and cocoa and confectionery works. The Plantagenet walls, 3 m. in circuit, are pierced by four gateways or bars, and the city forms a perfect storehouse for the antiquary.

Its great glory, the massive and dignified minster, or cathedral church of S. Peter, seat of the second archbishop of the Church of England, was built on the site of a 7th century church, and has been several times damaged by fire. Famous especially for its stained glass and chapter house, the existing structure was begun in 1230

and includes examples of the E.E., Decorated, and Early and Late Perpendicular styles. On both sides of the beautiful W. façade rise two towers, 201 ft.; in the N.W. tower is hung the bell called Great Peter. The central tower or Great Lantern rises 216 ft. Total length, E. to W., 519 ft.; extreme breadth, 224 ft. The lofty choir is separated from the nave by a Late Gothic screen. There is a Late Norman crypt; in the chapter library are 8,000 books and numerous valuable MSS. Paulinus was the first bishop of York, 627-33; Egbert the first archbishop, 732-66.

There are many other churches of note, some with beautiful old glass. In the grounds of the Yorkshire Philosophical Society, 1822, are the ruins of S. Leonard's Hospital, 1260-80, the largest of its kind in medieval England; and those of the 11th century S. Mary's Abbey, a Benedictine foundation. Clifford's Tower (E.E.) overlooks the county assize court and the former prison, now a folk museum of unique character. Other features

of interest are remains of the Gothic guildhall, destroyed in a "Baedeker" raid, April 28, 1942; the ancient hall of the Merchant Adventurers, public library, three museums, S. William's College, Tudor manor house, S. Mary's convent, and endowed schools. There are narrow, crooked streets, like the Shambles, with gabled overhanging houses. The 17th century palace of the archbishop is at Bishopthorpe.

At Clementhorpe is a park of 20 acres, presented by Rowntree & Co., Ltd., in 1921 as a memorial to men of the firm who were disabled or killed in the First Great War. York races are held on the Knavesmire. Cattle and produce markets are municipal. One member is returned to parliament. The city is the h. q. of Northern Command.

The Eboracum of the Romans, York became the capital of the British province and headquarters of the 6th legion. Hadrian lived here in 120; Severus and Constantius

Chlorus died here. Parliaments were held at York in the reign of Henry II and later. William the Conqueror laid siege to the city and destroyed it; following a siege of more than a year, it capitulated to the parliamentarians after Marston Moor. The title lord mayor of York dates from 1389. Market day, Sat. Pop. est. 105,970.

Bibliography. Histories and descriptions by F. Drake, 1736; W. Hargrove, 1818; J. Browne, 1838-47; G. A. Poole and J. W. Hugall, 1850; R. Davies, 1880; T. Widdrington, ed. C. Caine, 1897; M. Spence and M. E. Everatt, 1948.

York. City of Pennsylvania, U.S.A., the co. seat of York co. On Codorus Creek, 95 m. W. of Philadelphia, it is served by the Pennsylvania and other rlys. York is the centre of a rich agricultural region. It was laid out by Penn's surveyors in 1741, and a handsome Quaker meeting house of 1765 still

York. The cathedral or minster of S. Peter, which presents, especially in the west front here shown, one of the most perfect examples of Perpendicular architecture in England. Top, right, part of the old city walls

stands. York was the first lasting settlement in the state west of the Susquehanna. The continental congress made it the national capital for nine months in 1777-78. Incorporated in 1787, it became a city 100 years later. Foundry products, vehicles, bricks, furniture, clothing, and tobacco are made. Pop. 55,712.

York, HOUSE OF. Name given to the descendants of Edmund, (1341-1402), duke of York. They reigned in England, 1461-85, and on their behalf the Wars of the Roses were fought. In 1385 Richard II made his uncle, Edmund of Langley, duke of York. Edmund had two sons; the elder, Edward, succeeded to the title, but left no sons when he was killed leading the vanguard at Agincourt. The younger son, Richard, earl of Cambridge, had been executed for treason against Henry V in the same year, 1415. His son Richard succeeded to the dukedom.

But Richard was descended from Edward III not only through Edmund of York, his fifth son. Edward's third son, Lionel, duke of Clarence, left an only daughter Philippa, who married Edmund Mortimer, earl of March. Their granddaughter Anne was the wife of Richard of Cambridge and the mother of Richard of York. By the death of Anne's brother, Edmund, earl of March, without sons in 1425, Richard became, through his mother, the heir of Lionel of Clarence, through his father and uncle heir of Edmund of York.

After the death of Richard of York his sons, Edward IV and Richard III, represented the family. Richard was killed at Bosworth in 1485, after which his nephew Edward, earl of Warwick, son of George, duke of Clarence, was head of the Yorkists until he was executed in 1499. The house of York was represented thereafter only by females. One of these, Elizabeth, eldest daughter of Edward IV, was the wife of Henry VII, who thus claimed the estates of the dukedom of York. A sister of Edward IV, another Elizabeth, wife of John de la Pole, earl of Suffolk, left sons who gave trouble to the Tudors until the death of the last of them in 1525. A daughter of George of Clarence married Sir Richard Pole, and she too had several sons. See Lancaster; Roses, Wars of the.

York, FREDERICK AUGUSTUS, DUKE OF (1763-1827). British soldier. The second son of George III was born Aug. 16, 1763, and intended for the army. An income was

found by giving him as a baby the bishopric of Osnabrück. In 1784 he was made duke of York and Albany and a lieutenant-gen. In 1791 he married Frederica (1767-1820), daughter of the Prussian king Frederick William II.

Frederick Augustus,
Duke of York,
British soldier
After T. Phillips

In 1793 the duke was in command of a force sent to join the allied armies in invading France. Showing courage but no skill, he was easily beaten at Dunkirk and Tournai and in 1794 Pitt forced the king to recall him. In 1799 he took another force to the Netherlands. Field-marshal from 1795, York was made commander-in-chief in 1798, and did a good deal to improve the tone and discipline of the army. He was compelled to retire in 1809, as his mistress, Mary Ann Clarke, was charged with bribery, but was again commander-in-chief, 1811-27. He died Jan. 5, 1827. The "brave old duke of York" of nursery rhyme, he is commemorated by a column at the foot of Waterloo Place, London.

York, RICHARD, DUKE OF (1411-60). English nobleman. Born Sept. 21, 1411, he was the son of Richard, earl of Cambridge. His grandfather was Edmund, duke of York, son of Edward III, and when his uncle Edward was killed at Agincourt in 1415, Richard became the head of his branch of the royal family. In 1436 he was made lieutenant-general for Henry VI in France, and for some years was in charge of the warfare there.

In 1447 he succeeded Gloucester as chief opponent of the court party, and was sent to Ireland as lieutenant, but in 1450 he returned suddenly and led the opposition to Edmund Beaufort, duke of Somerset. It was suggested he should be declared heir, but instead he became protector for two brief periods. In 1455 the Wars of the Roses began, and at first York gained the upper hand; but by 1459 he was worsted and took refuge in Ireland. He returned to England and formally claimed the throne. His foes, however, caught

him at Sandal Castle, near Wakefield, where during the battle he was killed, Dec. 30, 1460. York was one of the more statesmanlike warriors of his time, often trying to come to terms without the use of force. His wife was Cicely Neville, and his sons included Edward IV and Richard III.

York, CARDINAL. For this Jacobite figure, see Stewart, Henry Benedict.

York and Lancaster Regiment. Unit of the British army. It was formed in 1881 by the amalgamation of the 65th (North Riding) Foot and the 84th (York and Lancaster) Foot. Raised in Suffolk, 1756, as a second bn. of the 12th Foot for service in the Seven Years War, the 65th Foot became a separate regt. in 1758. It first saw service when it took part in the capture of Guadeloupe, 1759, and provided detachments for forces sent to seize Martinique and Cuba.

York and Lancaster
Regiment badge

After a period of home service the 65th again crossed the Atlantic and served throughout the American War of Independence, earning particular distinction at Bunker Hill. In 1782 it took the territorial designation 2nd York-shire North Riding regt. In 1793-94 the 65th took part in the capture of Martinique and Sta. Lucia. After being in India for the second Mahratta War, in 1810 it helped to seize Mauritius from the French. Then followed service in the Mahratta and Pindari Wars. In 1819 the 65th were in action against Arab pirates in the Persian Gulf, and in 1846 went to New Zealand, remaining there until the end of the Maori Wars in 1865. In 1881 it became the 1st bn. of the York and Lancaster regt.

Raised in 1759 for service in India, the 84th Foot took part in the Mysore War and was disbanded in 1763. In 1775 it was formed again in Canada from Scottish settlers. It served throughout the American War of Independence as the Royal Highland Emigrant killed regt., and was again disbanded. Again formed in 1793, it went on active service in the Netherlands; in 1796 to the Cape; and in 1798 to Goa. In 1802 it was converted to marines for service in Indian waters, and in 1810 it joined the 65th Foot in the Mauritius expedition. Thence it moved to the Peninsula. During 1842-54 the regt. was in Burma, and it assisted in quelling

Richard Plantagenet,
Duke of York

Yorkshire. Map of the largest English county, whose "broad acres" include mountains, moorlands, beautiful dales, rolling wolds, and rich pasture lands, as well as a great coalfield and many famous centres of manufacturing industry.

the Indian Mutiny; one co. was massacred at Cawnpore, and the rest were at the relief of Lucknow.

The York and Lancaster regt. fought in the Sudan, 1884, and the S. African War. Twenty-two bns. were raised for the First Great War and gained the honours: Ypres 1915, '17, '18; Somme, 1916, '18; Messines, 1917, '18; Passchendaele; Cambrai, 1917, '18; Lys; Selle; Piave; Macedonia, 1915-18; Gallipoli, 1915. Service in the Second Great War included the campaigns in France, 1940; N. Africa; Crete; Sicily; Italy; Burma. The regimental depot is at Pontefract.

York House. Royal residence in London. Part of St. James's Palace (*q.v.*), so named since it was the residence of George V when duke of York, it became the home of his son, later Edward VIII. Lancaster House (*q.v.*) was first called York House.

Yorkshire. Largest co. of England. Its area is 6,077 sq. m., greatest length 89 m., greatest breadth 100 m. It is divided into ridings (*q.v.*), North R. (2,128 sq.

m.), West R. (2,775 sq. m.), and East R. (1,172 sq. m.), each with its separate council administration, the capitals of the three ridings being respectively Northallerton, Wakefield, and Beverley. At the junction of the ridings is the "Ainsty" of York (6 sq. m.), the county town. To the W. of the co. the greater part of the Pennine Chain, "the backbone of England," runs from N. to S. (Mickle Fell, 2,591 ft.). The co. is bounded E. by the North Sea, between the estuaries of Tees and Humber, the coastline being generally high and rocky from the Tees southward to Flamborough Head, thence to Spurn Point low and unrelieved. Inland to the N.E. is the moorland district of Cleveland and the Hambleton Hills, and in the E. the chalky Yorkshire Wolds. Eastward from the Pennines run famous and beautiful dales, Swaledale, Wensleydale, Nidderdale, Wharfedale, Airedale, etc. In the centre is the flat vale, or plain, of York.

Yorkshire is mainly drained by the Ouse and its tributaries Swale, Ure, Wharfe, Nidd; Aire, Don

(which rise in the Pennines), and Derwent, which rises in the N.E. hills. The Ouse flows into the North Sea by the Humber estuary. The Ribbles also rises in the Pennines, but soon flows W. into Lancashire. The Tees flows to the North Sea in the N., and in the N.E. a short river, the Esk, rises in the moors and has its own minor estuary at Whitby.

Coal is the most important mineral product, the coalfield covering most of the S.W. of the county, now largely industrialised, with the cities of Sheffield and Leeds as great industrial and commercial centres, and busy, if unbeautiful, towns such as Barnsley, Rotherham, and Dewsbury. Iron ore as well as coal is worked in Cleveland, with Middlesbrough the centre of the industry as well as its seaport. Limestone and sandstone are important. Bradford (another city) and Huddersfield are leading centres of woollen manufacture, which engages a large part of the W. Riding.

On the other hand, the N. and E. Ridings are mainly agricultural.

Sheep farming and horse breeding are leading activities, and there are extensive cereal crops. Yorkshire hams have been famous, as is Wensleydale cheese. York and Ripon are cathedral cities. Popular holiday towns on the coast are (N. to S.) Redcar, Saltburn, Whitby, Scarborough, Filey, Bridlington, and Hornsea, and there are also the picturesque fishing villages of Staithes, Runswick, and Robin Hood's Bay, as well as smaller resorts. Harrogate is an inland spa. Doncaster is famous for its rly. works and its racecourse. The county is well served by rlys., and the Great North Road runs through it from Bawtry in the S. to Darlington, just across the Durham border in the N. There are many ancient castles, as well as such great estates as Harewood, Castle Howard, Bolton, Wentworth Woodhouse, Farnley, Garrowby. Among numerous beautiful abbey ruins are those of Fountains, Kirkstall, Jervaulx, Rievaulx, Bolton, Whitby, and Byland. Excluding boroughs, Yorkshire returns 20 M.P.s. Pop.: W. Riding, 3,352,555; N. Riding, 469,375; E. Riding, 482,936.

LITERARY ASSOCIATIONS, ETC. The name of Caedmon, first English poet, is closely linked with Whitby Abbey, as is that of the Venerable Bede. Wycliffe was born at Hipswell, near Richmond, and Coverdale is said to have taken his name therefrom. Ascham was born at Kirkby Wiske. Sterne, who held the livings of Sutton (near York), Stillington, and Coxwold, drew upon local characters for the persons in *Tristram Shandy*, which he wrote at Coxwold. Sydney Smith was for 20 years rector of Foston. At Haworth is the parsonage where the Brontë sisters lived; they were born at Thornton, near Bradford. Scott wrote of Jervaulx in *Ivanhoe*, of Whitby in *Marmion*, and of the Barnard Castle dist. in *Rokeby*. In the last district also Dickens placed his villainous schoolmaster Squeers. Wordsworth found inspiration in the county for *Hartleap Well*, *The White Doe of Rylstone*, etc. Lytton wrote of *Knaresborough* in *Eugene Aram* and of *Middleham* in *The Last of the Barons*. Mrs. Gaskell set scenes of *Sylvia's Lovers* at Whitby, and the same place figures in *Bram Stoker's* sensational romance, *Dracula*. Mary Linskill was a once-popular novelist who in *The Haven Under the Hill* and other works also wrote much of Whitby, where she lived and died. The many later writers

who have drawn fully on Yorkshire scenes and characters include J. B. Priestley (a native of Bradford), Phyllis Bentley (a native of Halifax), and Leo Walmsley, who wrote of the Robin Hood's Bay district. Humbert Wolfe was educated at Bradford. The *Victoria History* of the co. appeared in 3 vols., 1907-14.

Turner, while visiting Farnley Hall, found inspiration in Wharfedale for some of his finest watercolours. Yorkshire itself has produced outstanding artists, among them Etty, Sir William Rothenstein, R. V. Pitchforth, and Raymond Coxon, and the sculptors Henry Moore and Percy Metcalfe. George Du Maurier had a house at Whitby and often used local scenes in his Punch drawings. Delius was a Bradford man.

Yorks is famous for its choral singing, the Sheffield choir having enjoyed a world reputation. Nor must mention be omitted of Yorkshire county cricket, which has for so long played a dominating part. The team won the county championship 22 times between its inauguration in 1873 and 1946, and shared it in 1949: a record unapproached by any other county. The names of Lord Hawke, F. S. Jackson, Hirst, Rhodes, Sutcliffe, Kilner, Leyland, Verity, Bowes, Norman Yardley, and Hutton are commanding ones in the story of international cricket over 50 years.

Yorkshire Light Infantry, KING'S OWN. Regiment of the British army. Raised in Yorkshire in 1755 as the 51st Foot, it first saw active service in Flanders, and was one of six British infantry units at

Yorkshire Light Infantry badge

Minden in 1759. It served in the American War of Independence and at Martinique and the Cape of Good Hope. In 1805 it was converted into light infantry, and was with Moore at Corunna, and later a unit of Picton's Light div., with which it fought in the Peninsula, gaining distinction at Salamanca, Vitoria, and Badajoz. It was on the field of Waterloo. The 51st spent most of the 19th century in India, taking part in the Afghan Wars and operations on the N.W. Frontier.

In 1881 the 51st adopted its present territorial designation and absorbed as its 2nd bn. the 105th Foot. This had been raised by the E. India co. in 1839 as Madras light infantry, and after the Indian

Mutiny came on to the British establishment. Both bns. of the K.O.Y.L.I. were in the S. African War, being prominent at the Modder River. Twenty-six battalions were raised for the First Great War and earned the honours: Le Cateau; Marne, 1914, '18; Mesines, 1914, '17, '18; Ypres, 1914, '15, '17, '18; Somme, 1916, '18; Cambrai, 1917, '18; Havrincourt; Sambré; Italy, 1917-18; Macedonia, 1915-17. In the Second Great War, bns. went to France, 1940; N. Africa; Italy; Burma; N.W. Europe. The regimental depot is at Pontefract.

Yorkshire Penny Bank. Established in 1859 and registered under its present title as a limited company in 1911. This concern was primarily intended for small investors and conducted a substantial business among children by schools savings accounts. As business developed, full banking facilities were provided. The large banks are believed to be the principal shareholders. Branches are established in many towns and villages in the North and Midlands, and a London office in Cheapside.

Yorkshire Post, THE. English daily newspaper, published in Leeds. It appeared first as a weekly, *The Leeds Intelligencer*, July 2, 1754. This became a daily, July 2, 1866, as the *Yorkshire Post* and *Leeds Intelligencer*, the name of the *Intelligencer* being dropped in 1883. In 1939 the paper absorbed an even older journal, the *Leeds Mercury* (established 1718), for long a formidable rival, though the *Yorkshire Post* had owned the paper for some years before the amalgamation. The price of the *Yorkshire Post* was at the same time reduced from 2d. to 1d. It is owned by the *Yorkshire Conservative Newspaper co.*, and in 1947 had the third largest circulation among provincial morning dailies. Anthony Eden was at one time on the staff. *The Yorkshire Evening Post* (1890) is issued at 1½d. by the same firm.

Yorkshire Regiment. Unit of the British army. Its official title since 1920 has been *The Green Howards (Alexandra, Princess of Wales's Own Yorkshire Regiment)*. See *Green Howards*.

Yorkshire Terrier. Small breed of dog descended from the Scotch terrier, but with longer and more silky hair. Similar in general shape to the smooth terrier, the body is longer and the limbs much shorter. The coat is of three colours—the back being slate-blue, the head and

legs silvery fawn, and the underparts tan. *See* Dog colour plate.

Yorkton. Town of Saskatchewan, Canada. It lies 130 m. N.E. of Regina, on the C.P.R. and C.N.R. The centre of a large livestock and grain-growing district, it has three elevators, a flour mill, machine shops, lumber yards, and an oil refinery. Pop. 5,517.

Yorktown. Town of Virginia, U.S.A., the co. seat of York co. It stands on York river, 65 m. S.E. of Richmond. Yorktown has twice been besieged. In 1781, during the American War of Independence, Cornwallis had withdrawn into it his whole force, consisting of about 7,200 men; investment by 16,000 Americans and French began on Oct. 5, and Cornwallis surrendered on Oct. 19. The second siege occurred in 1862, during the American Civil War, when the Confederates held the town from April 4 to May 3. Yorktown has the oldest customs house in the U.S.A. Pop. 521. *See* American Independence illus. p. 379.

Yoruba. Negro people living mostly in S. Nigeria. Estimated at 2,000,000, they attained under Libyan infiltration an advanced culture. Yorubaland, embracing 28,000 sq. m., lies between Benin and the Badagry river.

Yosemite Valley. Gorge in Mariposa co., California, U.S.A. It is situated at the S.W. base of the Sierra Nevada. Remarkable for its wildly picturesque scenery, it is between 7 and 8 m. long, from $\frac{1}{2}$ m. to rather more than 1 m. in breadth, and nearly 1 m. below the level of the neighbouring country. Mainly level, it is enclosed on three sides by almost vertical walls of granite. The Merced river, which traverses the valley, forms with its affluents a number of magnificent waterfalls. The most majestic of these are the Yosemite Falls, a succession of three, with a total descent of 2,500 ft. The valley forms part of the Yosemite national park, covering over 1,500 sq. m. *Pron.* Yo-sem-mity.

Yoshihito (1879-1926). Em-

peror of Japan. Born Aug. 31, 1879, in Tokyo, a younger son of the emperor Mutsuhito, he became heir apparent at the age of eight, elder brothers having died. In 1900 he married Princess Sadako,

and in 1912 came to the throne. He was much handicapped by ill-health, and from 1921 his son Hirohito (*q.v.*) acted as regent. Yoshihito died Dec. 25, 1926. His reign was called the era of righteousness (Taisho).

Yoshkar-Ola. Chief town of Cheremisa or Mari, an autonomous republic of the R.S.F.S.R. It is a rly. terminus, about 80 m. N.W. of Kazan. The people are of Cheremiss (*q.v.*) stock.

Youghal. Seaport and market town of Cork, Eire. It stands on the estuary of the Blackwater, 27 m. E. of Cork on the state rlys. The collegiate church of S. Mary dates from the 13th century. The town has a good harbour and trades chiefly in agricultural products. It is a centre for salmon fishing in the Blackwater. Pottery, silk, and lace are made. Norsemen settled at Youghal, which was given a charter in 1209. Raleigh as mayor, 1588-89, here introduced potatoes and tobacco to the British Isles. Pop. 4,803. *Pron.* Yawl.

Younans, VINCENT (1898-1946). American composer. A New Yorker, born Sept. 27, 1898, he provided the score for several musical comedies, beginning in 1921. Best known in England were *No, No, Nanette* (1924) and *Hit the Deck* (1929). The film music for *Great Day* was also by Youmans, and his most characteristic song was perhaps *Time on my Hands*. By 1930 he was one of the leaders in American light music, but he contracted tuberculosis and virtually stopped composing. He died April 5, 1946.

You Never Can Tell. Comedy by Bernard Shaw. This hilarious piece, with its brilliantly effective first act set in a dentist's work-room, was included in the volume, *Plays Pleasant and Unpleasant*, and was first produced for the Stage society at the Royalty Theatre, London, Nov. 26, 1899. It ran at the Strand, 1900, and has had frequent revivals, *e.g.* Westminster Theatre, 1938; Wyndham's Theatre, 1947.

Young, ARTHUR (1741-1820). British writer. A Londoner, born Sept. 11, 1741, he was brought up at Bradfield Hall, in Suffolk. He wrote works on agriculture based on his own experiences and on observations made on journeys through England, Ireland, and France, writings which gave a great impetus to scientific agriculture in England. His works include *A Tour Through the Southern Counties*, 1768; *A Tour*

Through the North of England, 1771; *A Tour in Ireland*, 1780. His *Travels in France* became specially of value for historians because Young was there before and early in the Revolution. In 1793 he became first secretary to the board of agriculture. He died April 20, 1820.

Young, BRIGHAM (1801-77). American religious leader. Born at Whitingham, Vermont, June 1, 1801, he entered the Mormon Church in 1832, and was chosen president in 1844. He had already set up branches in England. By skill and perseverance he established his people at Salt Lake City in 1847, and two years later

Brigham Young, Mormon leader

became governor of the territory of Utah. In this position Young misused power, so that federal troops were sent against him and he was obliged to resign in 1858.

He had in 1852 published the Mormon doctrine of polygamy, "revealed" to Joseph Smith ten years earlier, and enjoined its practice on all his followers, himself marrying over 20 wives and becoming the father of 57 children. An organizer of genius, he started industries, a cooperative society, university, temple, and theatre. He died Aug. 29, 1877. *See* Mormons; Salt Lake City; Utah. *Consult* Story of the Mormons, W. A. Linn, 1902; Life, S. Y. Gates, 1930.

Young, DINSDALE THOMAS (1861-1938). English preacher. Born at Corbridge-on-Tyne, Nov.

20, 1861, he began to train for the Wesleyan ministry at Headingley theological college in 1879, the youngest candidate accepted up to that time. His first pastoral charge, 1883-87, was at Hornsey, London; he moved subsequently, in accordance with the Wesleyan system, from one charge to another, building up a reputation as an eloquent and persuasive preacher.

Dinsdale Young, English preacher

Yoshihito, Emperor of Japan

Arthur Young, British writer
After J. Rising

He was minister of Wesley's Chapel, City Road, London, 1906-14, and was then appointed to the new Central Hall, Westminster, where Sunday after Sunday he preached to congregations of more than 2,500, remaining there until his death, Jan. 21, 1938. President of the Wesleyan conference in 1914, he published a number of books on devotional subjects, and an autobiography, *Stars of Retrospect*.

Young, EDWARD (1685-1765). An English poet. He went from Upham, Hants, to be educated at

Edward Young,
English poet

Winchester and Corpus Christi College, Oxford. A royal chaplain, in 1730 he was given the living of Welwyn, which he held until his death on April 5, 1765. In addition to several tragedies, Young wrote much pedestrian verse. His only poem of permanent value is *The Complaint, or Night Thoughts on Life, Death, and Immortality*, in blank verse, 1742, which achieved an extraordinary success and has been widely quoted and translated; e.g., from it comes "Procrastination is the thief of time."

Young, FRANCIS BRETT (b. 1884). English novelist. Born at Halesowen, Worcs, he was educated at Epsom College and Birmingham university, qualifying in medicine.

His first book, 1913, was a study of the poetry of Bridges. Experiences in Africa during the First Great War, when he was a major in the R.A.M.C., provided the inspiration for *Marching on Tanga*, 1918. But Brett Young made more stir as a novelist of the Welsh borderlands, producing realistic stories such as *The Young Physician*, 1919; *Portrait of Clare*, 1927 (James Tait Black prize); *My Brother Jonathan*, 1928, and *A Man About the House*, 1942 (both filmed). *Cold Harbour*, 1924, was a brilliant study in the macabre. *They Seek a Country*, 1937, and *The City of Gold*, 1939, were pictures of the African gold rush.

Francis Brett Young,
English novelist

Young, GLADYS. British radio actress. She was born in Newcastle, but moved as a child to

Gladys Young,
British radio actress

Sutton, Surrey, where later she was interested in amateur acting. She then studied at the R.A.D.A., where she was the first pupil to win the Robertson silver medal. During 1914-16 she was leading lady to Dennis Eadie, but then left the stage on her marriage to Algernon West. She first broadcast with the B.B.C. in 1926, and was soon a leading radio actress. She became one of the members of the B.B.C. drama repertory company on its formation in 1939, remaining with it until 1950. The acknowledged head of her particular profession, and sympathetic interpreter, by voice alone, of almost every type of feminine character, she probably took more parts in radio plays than any other individual. Her first film appearance was in *The Courtenays of Curzon Street*, 1947. Her sister was Emily Hilda Young, novelist, whose book, *Miss Mole* (1930), was awarded the James Tait Black memorial prize.

Young, JAMES (1811-83). British chemist. Born in Glasgow, July 13, 1811, he studied chemistry and physics in the Andersonian university and at University College, London. On the discovery of a spring of petroleum at Alfreton, Derbyshire, in 1847, he set about developing the industry of illuminating and lubricating oils. He established works for the distillation of coal or shale at Bathgate and Addiewell, and paraffin was one of the by-products of his process. He died May 14, 1883.

Young, OWEN D. (b. 1874). American lawyer. He was born at Van Homesville, N.Y., Oct. 27, 1874, and educated at St. Lawrence university and Boston university law school, lecturing at the latter during 1896-1903. After acting as counsel for the General Electric co., he joined the board, and became chairman in 1923. Wilson and Harding both employed Young as an adviser on business matters, and in 1929 he became chairman of a committee appointed to draw up a new scheme for German reparations. Thus was produced the *Young Plan* (q.v.). Young later presided over a committee for unemploy-

ment relief set up by Hoover, and continued to carry on business activities. A *Life* by I. M. Tarbell appeared in 1932.

Young, THOMAS (1773-1829). British physicist and Egyptologist. Born at Milverton, June 13, 1773, he early took an interest in science and languages. He took his degree in medicine at Göttingen, and in 1801 was appointed professor of natural philosophy at the Royal Institution. Young made his reputation by his researches on optics. He was the first to prove that the accommodating power of the eye is due to variation in curvature of the lens, and to give an explanation of colour sensation. He measured astigmatism, explained capillary phenomena, did work on the wave theory of light, and gave his name to Young's Modulus (q.v.) of elasticity. As an Egyptologist his great service was translating in 1814 the demotic text of the Rosetta stone. Young died May 10, 1829. There are *Lives* by G. Peacock, 1855; F. Oldham, 1933.

Thomas Young,
British physicist
After Sir T. Lawrence

Young England. Name given to an English political group that appeared about 1842-46. Its members were young Tories who in many ways disliked the policy of the party leader, Peel. Drawn chiefly from the aristocracy, Lord John Manners, afterwards 7th duke of Rutland, being one of them, the members advocated friendlier relations between rich and poor. Disraeli belonged to the group, whose ideas he described in *Sybil*, or *The Two Nations*, 1845.

Younger, GEORGE YOUNGER, 1st Viscount (1851-1929). British politician, born Oct. 13, 1851. In youth he entered the family brewing business. In 1906 he became M.P. for Ayr Burghs. An able speaker on Scottish matters and a powerful organizer, he was president of the national union of Conservative associations in Scotland, 1914. As chairman from 1916 of the Unionist party organization, he was a principal architect of the coalition victory in 1918. In 1922 his name became prominent in the internal dissensions of his party, and Younger resigned his post. Created a baronet in 1911, and made viscount in 1923, he died April 29, 1929. In 1946 Edward

George Younger (b. Nov. 21, 1906) became 3rd viscount.

Younghusband, Sir FRANCIS EDWARD (1863-1942). British soldier and traveller. Born at Murree, India, May 31, 1863, he joined the 1st Dragoon Guards in 1882. In 1890 he was transferred to the Indian service, and he became British commissioner to Tibet, 1902-04, and resident in Kashmir, 1906-09. His journeys of exploration and survey included one from Peking to India through Chinese Turkestan in 1887. Among his publications were *The Heart of a Continent*, 1898; *India and Tibet*, 1912; and (with his brother, G. J.) *The Relief of Chitral*, 1898. Sir Francis, knighted in 1904, died July 31, 1942.

Young Ireland Party. Name given to a group of men formed in Ireland in 1848 to unite all Irishmen irrespective of creed in an effort to secure the complete independence of the country from England. Among its leaders were Gavan Duffy and Smith O'Brien. The policy of violence led to a number of the leaders being transported or compelled to leave Ireland. See *Ireland: History*.

Young Men's Christian Association. International organization for promoting the spiritual,

Y.M.C.A.
badge

social, physical, and educational welfare of young men. In its present form it was founded by Sir George Williams (q.v.) in 1844. When a young man employed in a warehouse in St. Paul's Churchyard, London, he got together a band of young shop assistants for Christian fellowship and mutual improvement, and out of this has grown the worldwide organization briefly known as the Y.M.C.A. Its work was originally confined to young men attached to business houses who were either living in or in lodgings. The movement spread rapidly, and associations, as they were called, were formed all over the country, as well as on the Continent. In 1851 one was started in America, in 1853 in Australia, New Zealand, and South Africa, and in 1854 an alliance of associations of the U.S.A. and Canada was established. The international movement really dates from 1855, when the first world conference was held in Paris.

During both Great Wars the British Y.M.C.A. rendered invaluable service by its welfare work at home and in the battle areas. It organized huts and canteens for war workers and soldiers in camp

Young Men's Christian Association. National h.q. for the British Isles, at the corner of Tottenham Court Road, and Gt. Russell St., London

and billets; it arranged concerts and lectures. The national headquarters are at 112, Great Russell Street, London, W.C.1

Young Plan. Scheme for German reparations payment, drawn up in 1929, to replace the Dawes Plan (q.v.). It reduced the annuities payable, limited the number of yearly payments to 59, and created the bank of international settlements at Basel to handle all reparations transactions. The world depression made it impossible for Germany to continue even these reduced payments, and in 1931 the Hoover (q.v.) moratorium—intended as a temporary measure—suspended them. No further attempt to collect reparations had been made when the Second Great War started.

Young's Modulus of ELASTICITY. Term given in engineering to the constant which governs the relationship between stress and strain of an elastic material within its range of elasticity. The modulus is found by dividing a stress by its corresponding strain; its units are the same as those of the stress, since the strain is only a number. The value of the modulus of direct elasticity for mild steel is 30,000,000 lb. per sq. in., and for transverse elasticity 12,000,000 lb. per sq. in. Young's modulus for rubber is not a constant, for strain and stress do not vary in direct proportion.

Youngstown. Industrial city of Ohio, U.S.A., the co. seat of Mahoning co. It stands on Ma-

honing river, 64 m. E.S.E. of Cleveland, and is served by the Baltimore and Ohio and other rlys. Settled in 1796, Youngstown was incorporated in 1848. In a region rich in minerals, it turns out a sixth of the pig iron and an eighth of the steel of the U.S.A. There are 4 sq. m. of public parks. Pop. 167,720.

Young Turks. Turkish political organization. The outcome of a movement whose ostensible object was the re-establishment of the constitution granted by the sultan Abdul Hamid in 1876, it really aimed at resuscitation of the Turkish empire and complete Turkification of its peoples. A secret committee of union and progress was formed at Salonica in 1905, and included Enver Pasha (q.v.), who headed a revolution which broke out at Resna, July 3, 1908. Monastir (Bitolj) was captured and the sultan dethroned. In general administration the Young Turk committee showed itself more oppressive and tyrannous than Abdul Hamid had been. It drove Turkey into the First Great War on the side of Germany. In 1918 the leaders fled. See *Turkey: History*.

Young Women's Christian Association. International organization for the spiritual, social, physical, and educational welfare of young women. Known briefly as the Y.W.C.A., it does what the corresponding Y.M.C.A. does for young men. It was founded in 1857 in Great Britain and the following year in America. Like the Y.M.C.A. it organizes hostels and clubs in nearly every country of the world and during both Great Wars looked after the welfare of women in the services and industry. The British headquarters are in Great Russell Street, London, W.C.1.

Youth Hostels Association. Name of three British wayfaring organizations; the Y.H.A. of England and Wales, the Y.H.A. (Scottish), and the Y.H.A. of N. Ireland. Based on the early 20th century German Wandervögel, which in turn was derived from the bands of artisans and minstrels who travelled through medieval Germany, the British Youth Hostels Associations were founded in 1930. They help people, particularly young persons of limited means, to a greater appreciation and care of the countryside; encourage walking and cycling holidays; and provide hostels and other simple accommodation for travellers. Hostels are main-

tained throughout the U.K., each under control of a warden. Accommodation includes separate dormitories for men and women, with bed, pillow, and blankets, washing and cooking facilities, and a common room. The standard overnight charge is 1s. 6d., or 9d. for those under 16. Some hostels rank as catering establishments. Use of hostels is restricted to members of the associations, which charge a subscription ranging from 1s. to 7s. per annum according to age, or a life subscription of £4 4s. The British associations belong to the International Youth Hostels Federation.

Youth Service. Branch of the educational system of the U.K. It is concerned with the leisure of young people between 15 and 20 who are no longer in full time attendance at school. It developed

out of the work of such voluntary organizations as the Church Lads' brigade, boy scouts, and girl guides. In 1939 the board of Education was given the special responsibility of looking after the needs and interests of young workers, the minister being authorised to make grants to voluntary youth organizations.

The Education Act, 1944, placed upon every local education authority the duty of providing facilities for leisure time occupation for those over compulsory school age. It was expected that youth activities would be associated closely with county colleges when those were established; meanwhile they were related principally to evening institutes, religious organizations, and boys' and girls' and mixed clubs. Almost every educational authority has a youth officer. Local education authorities may make grants, while the ministry of Education assists financially

national bodies that cooperate. Consult Purpose and Content of the Youth Service, H.M.S.O., 1945.

Ypres (Flem. Yperen; Ger. Ypern). French and most familiar name of a town of Belgium, in the prov. of West Flanders, on the Yperlee and the Ypres canal, 28 m. S. of Ostend; in the Middle Ages, together with Ghent and Bruges, one of the most

important and prosperous trading cities of Flanders, and an international centre of cloth making and trade, with a reputed 14th cent. pop. of 200,000. Its beautiful Gothic buildings reflected this lost glory: the Cloth Hall, with a frontage of over 150 yards, built 1201-1304; the adjoining Meat Hall, 13th century; the belfry, same period; two hospitals of 1261 and 1279; and the cathedral of S. Martin, a remarkable building of 1221-66, with three naves, an unfinished tower, and the tomb of Jansen; also numerous private dwellings of Gothic and Renaissance style stretching from the large central square, the Groote Markt.

Assailed by the Germans in Oct., 1914, this town was almost com-

Ypres, Belgium. Arch of the Menin Gate erected in 1927 as a memorial to British soldiers

Ypres arms

Ypres, Belgium. 1. The 13th century Cloth Hall in the Grand Place, the finest Gothic public building in the country, as it stood before the First Great War. 2. The shattered belfry standing among the ruins after the German bombardment. 3. The Cloth Hall partially restored, showing part of the ruins in the centre, and the cathedral on the right

pletely destroyed by shell-fire during the First Great War. Its post-war construction closely followed the old pattern, even in domestic buildings, though the ruins of the original Cloth Hall were preserved as a memorial. At the Menin Gate (Porte de Menin), on the Menin road leading W. from the town, a great arch was erected 1927 as a memorial to missing British soldiers. The town is also surrounded by 40 British war cemeteries.

Taking part in Philip van Artevelde's revolt against the

count of Flanders in the 14th cent., Ypres was taken by the French in 1382, and again besieged in 1383 by Ghent and English forces. It was frequently assaulted and conquered by French, Spaniards, and others in the 16th and 17th centuries. Its fortress was dismantled by Joseph II of Austria, 1781. The bishopric—1559–1801—brought Ypres some reputation when Cornelius Jansen (q.v.) held it 1636–38. Ypres has a museum, a library, and some textile and biscuit industry. Pop. (1935) 15,965. *Pron.* Eepr.

positions on Oct. 29, and succeeded in rolling up a part of the British line. But determined British resistance gave time for the arrival of reserves, who recovered almost all the lost ground. The last British reserves were sent up in buses to Ypres. On Oct. 30 a German attack on the Messines ridge was held at Messines, but the enemy gained some important positions, the British being pushed back towards Wytschaete and St. Eloi before the attack was brought to a standstill.

The salient shrank still more the next day, with the German artillery concentrating a violent converging fire on Ypres. At Gheluvelt eight German battalions assaulted and captured a position held by only 2,000 British, of whom 1,000 were taken prisoner; and part of Messines was taken by storm after a protracted struggle. The British artillery moved back, and Sir J. French had given orders for a general retreat; but after assurances of further French support he determined to stand firm.

Messines was lost on Nov. 1, but with the arrival of fresh French troops Wytschaete was held against all attacks, and the crisis had passed. Sir J. French ascribed to the timely arrival of French help the preservation of Ypres. Although Wytschaete was lost by the French the next day, the fighting about the Messines ridge thereafter died down.

New German attacks opened Nov. 5 near Kleine Zillebeke and Zwartelen, with little permanent result, but on Nov. 10 St. Eloi fell to a German attack from both sides. The last great assault of the year was delivered on Nov. 11, on the Ypres defences from Zonnebeke to Messines, 13½ German divisions

YPRES: THE BATTLES OF 1914-1918

The name of Ypres is immortalised in British history like those of the Aisne, the Somme, Jutland, and other places and regions associated with the most important battles of the First Great War. The courses of the first, second, and fourth battles of Ypres (1914, 1915, 1918) are outlined here. For the story of the third battle see under Passchendaele. See also Hill 60; Messines, etc.

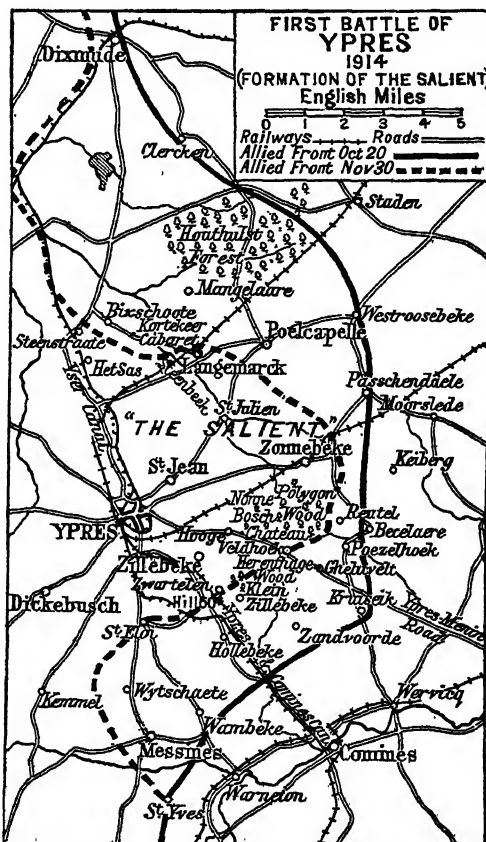

Throughout the fighting on the western front in the First Great War, Ypres remained a key position just inside the British line, which projected in a "salient" (the Ypres salient) in front of the town, the extent of the salient varying as a result of the battles. The only time the Germans ever

reached Ypres itself was for a few days in Oct., 1914, during the comparatively mobile period when the opposing armies were racing to preserve an intact line to the coast, the Germans hoping to gain possession of the Channel ports. These German patrols were driven out by the British, then in process of taking up that position to the left of the Allied line which they maintained until the end of the war.

The German 4th army, with a total strength of 200,000, was at once deployed to turn the Allied left flank and seize Calais. Facing it stood the British cavalry corps and 7th div., holding Ypres; and to the left two French corps divs., and a French cavalry corps, with the French naval brigade on the Yser and six weak Belgian divs. on the coast. For the French and Belgian operations see Yser. For the British positions on Oct. 20, see map.

The Germans opened a great offensive on Oct. 21, driving back the French cavalry corps and thus threatening the British left flank. French reinforcements took up positions on the British left, Oct. 23. Throughout the preliminary stage the weak British front to the S. of Ypres had been

continually attacked (see La Bassée), but the German command now decided to break off this southern offensive and concentrated on Ypres. They attacked again with new and greater dis-

(200,000 men) being deployed. Twelve battalions of the German Guards div. attacked at Polygon Wood and Veldhoek in thick mist, only 2,500 British and French opposed them. They were repulsed with heavy loss, but a German advance was made through Nonne-boschen Wood to Hooze Château. The situation was critical for the British. Orderlies and transport men held up the Germans until other troops arrived to counter-attack. Further S.W., Hill 60 was taken by the Germans in heavy rain. But thereafter the fighting died down again, and a further severe German repulse on Nov. 17 led to the abandonment of the offensive. German losses in the whole series of engagements totalled over 150,000. British losses were approx. 50,000, the French rather more. The total Allied force engaged was 263 battalions against 426 German battalions of much greater strength.

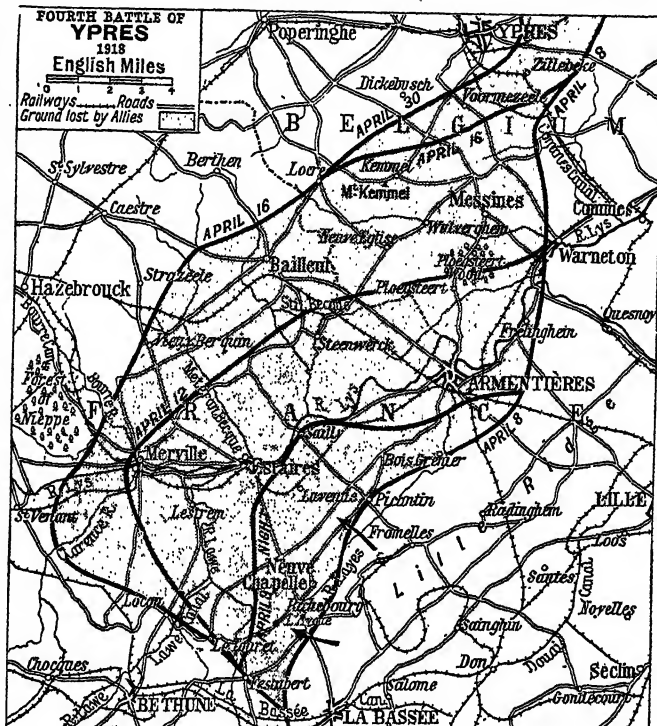

Local engagements continued in the region of the salient. The Allies lost Langemarck in Dec., 1914, and recaptured St. Eloi in March. Full-scale fighting broke out again in April. Hill 60 was captured by the British on April 17. But the German 4th army opened a heavy attack on April 22, along the N. section of the front, from

Second Battle, April-May, 1915

Steenstraete to Langemarck. Opposing them were Belgian troops on the Allied left, then a French colonial div., then E. of Langemarck two Canadian brigades.

This German attack is notorious as the one in which poison gas was used for the first time, in this case chlorine gas, discharged from cylinders in a cloud. The French colonial troops were the first victims to an attack against which all were at that time defenceless. German infantry advanced behind the gas cloud. The flank of the 3rd Canadian brigade was left in the air. If it had yielded, Ypres was lost. But it held. The Canadians were drawn back to a defensive line along the Ypres-Poelcapelle road, while Canadian artillery pounded the advancing German infantry. There were Canadian counter-attacks at midnight and again next day, which carried the Allied front 1,000 yards N. at heavy cost. But the Germans had crossed the Yser canal in the gas onslaught, and the whole position was critical.

The Germans released more gas on the 24th and attacked in force

between St. Julien and Graven-stafel, pushing back the depleted 3rd Canadian brigade to S.W. of St. Julien. British attempts to retake St. Julien on April 25 were frustrated. But the German attacks had now lost their first vigour. Moreover, rudimentary gas masks had now been contrived, and an attack on May 2, again behind a gas cloud, was beaten back. Minor adjustments of the British front followed; and a great gas attack to the E. gave Hooze to the Germans on May 24. But this 2nd battle of Ypres slowly died down. The German aim was probably no more than an attempt to paralyse the Allies by a demonstration of strength while their real offensive of the year was being directed against Russia. The Canadians covered themselves with glory in this battle but at the cost of some 6,000 men.

The 3rd battle of Ypres is the official name for the bitter and disillusioning struggle of July-Nov., 1917, now more generally written of as Passchendaele (q.v.).

The 4th battle of Ypres is sometimes called the battle of the Lys. It was part of the final gigantic German offensive of 1918. In the hope of easily capturing the high ground W. of the Lys, and S.W. of Ypres, which was the

key to the defence of the salient, Ludendorff opened an attack on both sides of the Lys on April 9, with a violent barrage of gas and

Fourth Battle or Battle of the Lys

H.E. shells, especially on the sector temporarily held by Portuguese troops. British forces in this quarter (1st army) had been weakened by the withdrawal of 10 divisions for the 2nd battle of the Somme and their replacement by divisions exhausted in that battle, reinforced by young and inexperienced drafts from home. The German infantry advanced in overwhelming strength, covered by thick mist, and by striking at the Portuguese line tore a great gap in the British front and poured through it, overrunning the British heavy artillery positions. A great catastrophe seemed in sight. But the British to N. and S. of the Portuguese held firm. To the S. they swung the flank back to Le Touret where they linked with those of the N. and closed the gap.

The 55th division distinguished itself greatly at Festubert, where it put up a desperate defence and broke the initial energy of the German assault. But the British were pushed back at Sailly, and at Estaires. Ploegsteert Wood was

lost and Armentières abandoned on April 10. The next day further German advances towards Merville compelled the evacuation of the Messines positions. The British front was broken from Merville to S.W. of Bailleul. But every available man was brought up and the Germans were held. On the night of April 12 troops in this line were directed to hold to the last.

It was at this point that Haig's memorable order was issued:

Every position must be held to the last; there must be no retirement. With our backs to the wall, and believing in the justice of our cause, each one of you must fight on to the end. The safety of our homes and the freedom of mankind alike depend on the conduct of each one of us at this critical moment.

Australian and French reinforcements arrived and the crisis passed, though more ground had to be abandoned. Bailleul was lost on the 15th, and on the same night the British at Ypres withdrew to positions in front of the town in case a general retreat from Ypres became necessary. On April 16-17 a determined German attempt to pinch out the Ypres salient was repulsed, and the fighting died down for a few days.

It was resumed on April 22, and during following days the Germans stormed Kemmel Hill and took Loere, and on April 27 a supreme German effort was made with 120,000 troops to break through on an 8-mile front from Loere to Dickebusch. But they were repulsed at every point, and on the following day were driven back E. of Loere. This marked the end of the battle, with the gain of much ground by the Germans, at very heavy cost, but of none of their ultimate objectives.

Ypres, JOHN DENTON PINKSTONE FRENCH, 1st Earl of (1852-1925). British soldier. Born at Ripple, Kent, Sept. 28, 1852, of Irish stock, he was first intended for the navy, but after four years as cadet and midshipman, he left to join the militia. In 1874 he was commissioned in the 8th Hussars, later transferring to the 19th. Captain 1880, and major 1883, he first saw active service in the Sudan campaign designed to relieve Gordon at Khartum, 1884. In 1889 French obtained command of the 19th Hussars, but left it after five years to become asst. adjutant-gen. of cavalry. In 1897 he was given command of the 2nd cavalry brigade, and in 1899 of the 1st cavalry brigade, as temporary major-general.

French was one of the few officers to establish a name in the

S. African War. As major-general he commanded the cavalry div. in Natal. He led the relief of Kimberley, then cut off Cronje as he escaped from Paardeberg; and commanded the cavalry in the operations ending in the capture of Bloemfontein and Pretoria. He was in charge of the operations in the eastern Transvaal until the end of the war. He was rewarded with the K.C.B., K.C.M.G., and the rank of lieutenant-gen., with the Aldershot command, which he held until 1907, when he became full general and succeeded the duke of Connaught as inspector-general. In 1912 he followed Sir W. Nicholson as C.I.G.S., and in 1913 was made field-marshal.

He resigned in 1914 following the government's action over the resignation of British officers at the Curragh (*q.v.*), but on the outbreak of war was chosen to lead the B.E.F., and was in command during all the early decisive stages of the fighting in the western front. By Sept. 16 he had decided that frontal attack was useless and began to urge the march to Belgium to prevent German capture of the Channel ports. His views slowly prevailed, though not in their entirety, and the great 1st battle of Ypres was a result. All this time and until the end of the battle of Festubert in May, 1915, French had pressed the supply of ammunition, especially high explosive shells, on a scale previously unimagined. He enlisted the support of Col. Repington, military correspondent of *The Times*, and Repington's publication of the facts helped to create the political crisis which established the first coalition govt.

It had become increasingly evident that French found it difficult to cooperate with Joffre and even with his own corps commanders. He was often persuaded to a course of action in which he had little faith, and its subsequent execution left much to be desired. The expensive and fruitless actions at Neuve Chapelle, Festubert, and Hooge, in early 1915, provoked many doubts. Moreover, he exposed himself to criticism by first commending Smith-Dorrien's action at Le Cateau, then later stating that it had imperilled the safety of the whole army. Then,

1st Earl of Ypres,
British soldier

after the battle of Loos, Sept., 1915, he endeavoured to place the responsibility for failure on Haig by misdating the time at which the reserves had been sent forward. This moved the govt. to action, and at the end of 1915 French surrendered his command to Haig, and was placed in command of all troops in the U.K. until appointed lord-lieutenant of Ireland 1918-21. He became a viscount in 1916 and an earl in 1921, and died May 22, 1925, being succeeded by his son John (b. 1881). Among the many honours of the 1st earl were the O.M. and the K.P. In 1919 he published an angry and controversial book about the so-called "shell shortage" with the title "1914." *Consult* Life, by his son, the Hon. G. French, 1931.

Ypsilanti. Name of a family of Greek patriots. Of the Fanariotes class, claiming descent from the imperial family of Comnenus, the first Ypsilanti was Alexander (1725-1805), hospodar of Wallachia during 1774-98, who was executed at Constantinople for suspected plots against the sultan. His son Constantine (1760-1816) was also a hospodar until 1805, when, assisted by Russia, he attempted the liberation of Greece, but failed and retired to exile in Kiev. His eldest son Alexander (1792-1828) served against Napoleon in the Russian army, and rose to be major-general. In 1821 he headed a rising against the Turks and proclaimed the independence of Greece at Jassy, but was defeated by the army of the Porte at Dragashan, June 19, fled to Austria, and died Jan. 31, 1828. His brother Demetrius (1793-1832) took part in the Greek rising of 1821, and forced the Turks in East Hellas to capitulate in 1829. He died Jan. 3, 1832.

Ysaÿe, EUGÈNE (1858-1931). Belgian violinist. Born at Liège, July 16, 1858, he studied there, under Wieniawski at Brussels, and in Paris until 1879. In 1886 Brussels conservatoire made him professor of the violin. His fame was firmly established in England by recitals in 1889, and he first visited the U.S.A. in 1894. He was to go back during the First Great War as conductor at Cincinnati. From 1922 he was playing in Europe until his death, May 12, 1931. One of the foremost violinists of his day, Ysaÿe excelled in Bach and Franck. He also composed a symphony, which was performed in 1905 in London, as well as an opera, *Peter the*

Coalminer, 1929. In 1947 appeared a study by his son Antoine and B. Ratcliffe.

Yser (Flemish Ijzer). River of France and Belgium. Rising near Noorpeene, in Nord dept., France, it flows N. and N.E. to Dixmude, where it turns N. to enter the North Sea at Nieuport (*q.v.*). Normally navigable over the greater part of its course, it is linked by canal with Furnes from Westvleteren. Length is 55 m.

Yser, BATTLE OF THE. Action of the First Great War. This battle, fought Oct. 15-31, 1914, as the last act in "the race to the sea" between the Allies and the Germans after the Aisne, was the successful defence of the line of the river Yser from Nieuport to Dixmude by the Belgian army with French support against the 4th German army. The Belgians were weak after their difficult retreat from Antwerp and numbered only 48,000 rifles. Behind the Yser, which forms a projecting arc from Nieuport to Dixmude, runs a railway embankment forming the chord of the arc, raised above the low and swampy ground, which is below the level of the sea at high water and can be flooded by opening sluices at Nieuport. By Oct. 20, the Allies were forced back to the W. bank of the Yser except at Nieuport and Dixmude. The Germans crossed on the 22nd. On the 24th fifteen assaults were delivered by the German troops. The Belgian shells were almost exhausted, and the Belgian staff was contemplating retreat to Dunkirk, when the flooding of the country was adopted.

At first the wrong sluices were opened and the water rose very slowly. On the 29th the Germans made preparations for a final attack. In the night the Belgians opened the main sluice in "No Man's Land" and the sea poured in; on the 30th the German infantry advanced. They penetrated beyond the embankment, and for some hours everything seemed lost. But on the 31st the Belgians and a French division counter-attacked and drove out the Germans, hundreds of whom perished in the inundations. The Allied loss was over 20,000, and that of the Germans probably double. The line of the Yser, S.E. of Dixmude, was thereafter held by the Allies.

Yssel. River of the Netherlands. A distributary of the lower Rhine, it branches off 2 m. above Arnhem, and flows N. and N.E. through the provs. of Gelderland

and Overijssel to enter the Yssel Meer near Kampen. On its banks are Zutphen, Deventer, and Kampen. Its length is 87 m.

Yssel Meer (Yssel mere). Lake of the Netherlands. A remnant of the former Zuider Zee (*q.v.*), it had by 1944 become virtually a fresh water lake. It is 470 sq. m. in extent. See Netherlands:

Yssel Meer. Part of the barrage between N. Holland and Friesland cutting off the Yssel Meer (formerly the Zuider Zee) from the North Sea

Land Reclamation, and map; Wieringen.

Ystad. Seaport of Sweden, in the extreme S., in the län or govt. of Malmöhus. Situated on the Baltic, 41 m. by rly. E.S.E. of Malmö, it has shipbuilding yards, iron foundries, sugar refineries, and match, tobacco, chemical, and chicory factories. Pop. 11,556.

Ythan. River of Aberdeenshire, Scotland. It rises at the village of Ythan Wells, 7 m. E. of Huntly, and flows generally E. through Fyvie, Ellon, and Slains to the North Sea, where it discharges 12 m. N. of Aberdeen. Its length is 35 m.

Ytterbium. Rare chemical element, whose symbol is Yb, discovered in 1878 by Marignac in the mineral gadolinite. In 1907 Urbain announced that he had been able to separate ytterbium by fractional crystallisation in nitric acid into two elements, which he called neoytterbium and lutecium. Atomic weight is 173.04; atomic number 70.

Yttrium. One of the metallic elements. Its chemical symbol is Y, atomic weight 88.92, atomic number 39. It is a dark grey powder, and is found in the mineral gadolinite and other rare earths, notably the cerium group.

Yucatan. Maritime state of Mexico. In the Yucatan penin-

sula, it has a coastline on the Gulf of Mexico, covers an area of 23,926 sq. m., and has a pop. of 418,210. Quantities of sisal hemp are produced. Mérida is the capital. See Aztec.

Yucatan Peninsula. Land mass of Central America. It comprises the Mexican states of Campeche and Yucatan, the federal

dist. of Quintana Roo, and parts of the Central American states of British Honduras and Guatemala; and separates the Gulf of Mexico from the Caribbean Sea. It measures about 400 m. in length and some 200 m. in breadth. Here are forests of mahogany, rosewood, and other valuable woods, yielding hennequen or sisal hemp, maize, rice, and tobacco. The peninsula is rich in antiquities. First visited by Spaniards in 1508, Yucatan remained a Spanish possession until 1821, and in 1852, after a period of independence, became part of Mexico.

Yucca. Genus of plants of the family Liliaceae. See Adam's Needle.

Yudenitch, NIKOLAI NIKOLAEVITCH (1862-1933). Russian soldier. Born July 18, 1862, he entered the Russian army 1879, saw active service in the Russo-Japanese War, and at the outbreak of the First Great War was chief of staff, and virtually c-in-c. of the army of the Caucasus. Early in 1915 he defeated the Turks under Enver Pasha there, and in 1916, with the Grand Duke Nicholas as his titular chief, conquered all Turkish Armenia. He led an army against the Bolsheviks near Petrograd (Leningrad) in 1919, was defeated, and went into retirement. He died Oct. 6, 1933.

YUGOSLAVIA: BALKAN REPUBLIC

Edgar Stern-Rubarth, Ph.D.

Here is an account of a country, at first a kingdom, later a republic, which came into existence after the First Great War. Further information is to be found in articles about its constituent parts, Bosnia; Croatia; Herzegovina; Montenegro; Serbia, etc.; and under names notable in its history, e.g. Karageorgevitch; Mihailovitch; Tito. See also Trieste; Venezia Giulia; Zadar

Yugoslavia (Serb-Croat Jugoslaviya, South Slavia), the state created at the end of the First Great War by the amalgamation of the previously Austro-Hungarian counties of Bosnia-Herzegovina, Dalmatia, Croatia-Slavonia, and parts of Carniola (Slovenia) with the kingdoms of Montenegro and Serbia under the Serbian Karageorgevitch dynasty, is situated between the Adriatic Sea and the middle Danube, the Alps and the Macedonian mts. Until 1929 its official name was kingdom of the Serbs, Croats, and Slovenes; in Nov., 1945, it adopted the style Federal People's Republic of Yugoslavia.

Except in the fertile plains of the Danube and the Save to the W. and N.W., Yugoslavia is a mountainous country whose highest elevation, in the S.E. Alps, is Triglav mt., 9,450 ft. The chief river, crossing the country from the extreme N.W. to Belgrade, where it joins the Danube, is the Save, navigable for nearly its whole course; its tribs. Bosna and Dvina, the Morava flowing into the Danube, and the Narenta flowing into the Adriatic, are other rivers of importance. The climate in the Mediterranean zone and beyond the mts. varies considerably. The seashore and the islands are evergreen; in the forest which covers some 40 p.c. of the interior, bear and wolf thrive as well as the usual European game.

Division of Population

The people, chiefly of southern Slav blood, are sharply split by religious and cultural differences, results of a long historical development on different lines, and of the widely different nature of the country's three principal sections. Although during and in consequence of the Second Great War something like 2 million lives were lost, the pop. was estimated at 15,324,500 on Jan. 1, 1947 (compared with 13,930,918 in 1931), of whom 46 p.c. were Serbs, 28.5 p.c. Croats, 8.5 p.c. Slovenes, the remainder being Magyars, Albanians, and others. The Croats are fine sailors, having produced notable admirals as well as notorious pirates. Most Croats and Slovenes, for centuries under Hapsburg rule, are

R.C., and, though their language is very like that of the Serbs, they write it in Latin letters; the Serbs have their own branch of the Orthodox church and use the Cyrillic alphabet. Forty-nine p.c. of the people are Serbian Orthodox, 38 p.c. R.C., 11 p.c. Mahomedan. Before the expulsion after the Second Great War of a large part of those of German extraction settled for centuries in the N. and the Bačka and the Banat, E. of the Danube, 2 p.c. of the pop. was Protestant. All religions have the same standing. The Orthodox church is ruled by a patriarch at Belgrade and a holy synod, and has 21 bishoprics; the R.C. church has 8 suffragan sees and 5 others dependent directly on Rome; the Muslims have a *reis-ul-ulema* at Sarajevo as their spiritual head.

Agriculture and Industry

Yugoslavia had an area of 96,220 sq. m. before the Second Great War, after which it was enlarged by the cession under the peace treaty with Italy of the greater part of Venezia Giulia, the commune of Zara (Zadar), and the island and islets of Pelagora, with a total of some 3,500 sq. m. More than half the land is under cultivation, producing maize, wheat, plums, wine, tobacco, apples, and vegetables. Before the Second Great War 80 p.c. of the pop. worked on the land; Yugoslavia came next to Argentina in the export of maize, while she was first for plums and prunes. She also exported many cattle and pigs. Industries comprised textiles, meat preserving, leather working, sugar making, brewing, distilling, and other activities based on agriculture. Copper was mined at Bor, coal between the Morava and the Danube and in central Croatia, lignite in Slovenia. There are also lead, zinc, antimony, chrome, bauxite, and salt deposits. A five-year plan, adopted April 28, 1947, aimed at developing industry, especially engineering, and at mechanising agriculture. In 1948 there were 450 state farms covering 750,000 acres; many others became part of cooperative units. All parcels of land in excess of 90 acres formerly privately owned had been confiscated.

Yugoslavia has some 6,700 m. of rly. and about the same length of state highways, including 500 m. of motor roads, as well as more than 14,000 m. of second class roads. Water transport is well developed both from port to port along the coast and along the Danube. Belgrade has an international airport, and there are internal air services. Before Nazi pressure forced Yugoslavia to trade chiefly with and through Germany, her exports went principally to Italy and Austria, her imports came from Czecho-Slovakia and Austria, Germany ranking third, the U.K. sixth, in her foreign trade.

There are six towns of more than 50,000 inhabitants each: the capital Belgrade (1947 est. 267,000); Zagreb in Croatia, 185,580; Subotica, 110,000; Skopje, 65,000; Ljubljana in Slovenia, 60,000; Fiume (Rijeka), 54,000. Sarajevo had 78,182 inhabitants in 1931, but lost a considerable part of its pop. after 1941. There are universities at Belgrade (1838), Zagreb (1874), and Ljubljana (1919). Elementary education is free and compulsory.

HISTORY. The Croats were probably the earliest settlers of the country. The Chorvati and Serbi mentioned by Byzantine authors immigrated from eastern Galicia into their present country, which was under Roman rule and influence from the first century A.D., in the course of the 6th century. They became independent of Byzantium 1180 and had their own kings from 1217, their own church under a patriarch from 1219. Under Stephen Dusan (1331-55), who called himself tsar of the Serbs and Greeks, they had a short period of far reaching power, but at Kosovo in 1389 were vanquished and subjugated by the Turks. Supported by Russia, they began to revolt against that domination in 1804, under Karageorge, and finally gained in 1816 a measure of autonomy under Serbian princes for the area which became in the course of the Russo-Turkish War of 1877-78 the independent principality (from 1882 the kingdom) of Serbia.

From about the middle of the 19th century, a Yugoslav movement developed, especially in Croatia, at first without any definite trend towards union with Serbia. Serbia's gains in the Balkan Wars (q.v.), 1912-13, and the events of the First Great War produced closer relations among the S. Slav movements and led to the creation, in London in 1915, of a Yugoslav committee. The independent triune state of Serbia, Croatia, and

Slovenia, proclaimed at Corfu in 1917, became a fact Oct. 6, 1918, at Zagreb. The new kingdom, under the Kara-georgevitch dynasty, was proclaimed Dec. 1, 1918, and the treaties of St. Germain and Trianon confirmed its territory within boundaries that remained until the Second Great War. Montenegro joined the new state in Nov., 1918.

The new state had many troubles, chiefly the result of a strongly centralist trend of dynasty and govt., led until 1926 by the powerful Pašić, and resisted by the Croats, under Stephen Radić, and by the Slovenes. A republican trend developed among the opposition, and the clashes with Italy, which cost Yugoslavia Zadar in 1920 and Fiume in 1924, and were to lead to her encirclement by Mussolini's taking Albania under his "protection" 1926-27, hindered compromise in home politics. Radić who, after a term in prison, joined the cabinet 1925-26, was assassinated in the chamber in June, 1928; and Alexander II by a *coup d'état* on Jan. 6, 1929, abolished constitution, parliament, and parties, and established a military dictatorship. He was assassinated Oct. 9, 1934, at Marseilles. His son Peter, a minor at school in England, succeeded him, with Alexander's younger brother Paul as regent.

Nazi pressure was exerted, first upon Yugoslavia's economy, and then upon her foreign policy, which was based on an alliance with France, dating from the creation of the state, and upon the Little Entente (*q.v.*) with Czecho-Slovakia (Aug. 14, 1920) and Rumania (April 23, 1921). The occupation of Czecho-Slovakia by the Nazis in March, 1939, and the pro-Nazi dictatorship in Rumania led to the surrender of the Yugoslav regency council when, in the spring of 1941, Hitler menaced the country; the people's spontaneous resistance, which forced Prince Paul to flee, transformed Yugoslavia into a theatre of guerrilla hostilities throughout the rest of the Second Great War.

In Croatia a Nazi puppet govt. was set up under Ante Pavelić.

one of those who plotted the assassination of Alexander II. At first Col. (later Gen.) Mihailovitch led the resistance by remnants of the regular forces and partisan troops, with some.

Allied support. In the course of 1942, however, left-wing partisans led by Josip Broz (Tito) took an ever more important part in fighting the invaders, Tito being recognized as a full Allied commander in Dec., 1943, and Allied help to Mihailovitch being withdrawn. Backed in the last stages of the struggle by Russian forces, Tito established a Communist govt. after the expulsion of the Germans. A constitution adopted by a national assembly Jan. 31, 1946, organized the country as a federation of the six republics of Serbia, Croatia, Slovenia, Montenegro, Macedonia, and Bosnia-Herzegovina, with two autonomous provs., Vojvodina and Kosovo-Metohija. There is a parliament of two chambers elected for four years—a federal assembly and a house of the peoples—which elects the presidium, or executive body, the president of which is head of the state.

The constitution decreed separation of church and state; women's suffrage; nationalisation of industry, transport, and distribution; confiscation of land in excess of 90 acres; and state control of foreign trade. In Jan., 1946, the primate, Archbishop Stepinac, was sentenced to 16 years' hard labour for opposing govt. measures; Mihailovitch and other officers were shot as traitors on July 17. Friend-

ship and mutual assistance treaties were signed with Bulgaria, Hungary, and Rumania during Nov.-Dec., 1947. But Tito's strongly nationalist regime, and his refusal to conform to the views of Moscow on the development of his country, led in July, 1948, to the expulsion of Yugoslavia from the recently formed Cominform, and the withdrawal of Russian support for Tito, whose country's needs compelled him to expand trade with the U.S.A. and the U.K., and to agree on compensation for expropriated British property.

LITERATURE AND THE ARTS. The Yugoslavs have considerable artistic gifts. Their simple folk-songs were made world-famous by Vuk Karadžić's collection, 1814-15. King Stefan Nemanja's chronicle, 1207, is the oldest known Serbian manuscript. In Mestrovich they produced an impressive and sophisticated sculptor. Modern writers include the Croats Dinko Simunović, Zofka Kveder, Miroslav Križev; the Serbs Borislav Staneković, Petar Kočić, Ivo Andrić; the Slovenes Ivan Cankar, Ivan Pregelj, Milan Jarc; many works by these authors were translated into other languages during the 19th century. French influence later made itself strongly felt, although dramatists, like Laza Kostić (1841-1910), were affected

by, and the lyric poet Oton Zupanić (b. 1878) made interesting translations of, Shakespeare.

Alexander, 1936; Peasant Life in Yugoslavia, 1942; Black Lamb and Grey Falcon, R. West, 2 vols., 1942; Yugoslavia, R. D. Hogg, 1944; The Italo-Yugoslav Boundary, A. E. Moodie, 1945.

Yukagir. Autonomous prov. in the Yakutsk republic, U.S.S.R. Verkhoyansk is the capital. See Verkhoyansk; Yakutsk.

Yukon. River of Canada and Alaska. Consisting of the combined waters of the Lewes and Pelly rivers, which unite at Fort Selkirk in Canada, it flows N.W. into Alaska, and, after a total course of 2,300 m., enters the Bering Sea by a large delta. The Lewes, which is included in the

length specified above, rises in Lake Bennett, near the Chilkoot Pass. The navigable season is from late May to early Oct.; stern-wheel steamers can reach Dawson City 1,400 m. upstream.

Yukon. Territory of Canada. It was made into a separate political unit in 1898, just after the discovery of gold in the region of the Klondike river; it was previously part of the Mackenzie dist. of the North-West Territories. Its area is 207,076 sq. m., and it is bounded by the Arctic Ocean, Alaska, British Columbia, and the N.W. Territories. Mt. Logan is 19,500 ft.; Mt. St. Elias and other peaks exceed 15,000 ft. The chief river is the Yukon.

Yukon is governed by a controller and an elected legislative council of three, and sends one representative to Ottawa. Dawson City is the capital; White Horse, in the S., is a mining settlement. The chief industry is mining gold

on the Klondike, but silver, lead, and coal are also worked. Spruce, balsam, birch, poplar, and cottonwood occur. Moose, caribou, bear, and other wild animals are plentiful. There is a rly. running from Skagway in Alaska to White Horse. Pop. 4,914.

Yukon Particle. Name at one time applied to the sub-atomic particle more often termed a Meson (q.v.).

Yunca (Quichua *Yucacuna*, inhabitants of a hot land). Name of an ancient Peruvian nation. They lived on the Pacific coast, with their capital near the modern city of Trujillo (q.v.). Yunca culture produced some of the greatest prehistoric works of S. America, such as those near Trujillo. See Peru.

Yunnan (south of the clouds). Most south-westerly prov. of China, touching Indo-China on the S. and Burma on the W. It covers 162,342 sq. m. Largely mountainous, it rises to 16,000 ft. in the W., with a slope from N. to S., while the other half is a broken plateau at an average alt. of 5,000 ft. Among many rivers, the Salween and Mekong have cut deep channels, and the Yang-tse touches Yunnan in the N. The prov. is heavily forested and rich in minerals; it yields 90 p.c. of the nation's tin and has had a mining industry for centuries; also copper, lead, zinc, tungsten, and some gold, coal, salt, and gypsum. Agricultural products are tea, tobacco, rice, wheat, and silk. Kunming (Yunnanfu) is the capital; Koki the tin centre; Tali a beauty spot; Mengtze, Szemao, and Tengyueh are other places. Important rlys. run and others are under construction to Indo-China and Burma. The celebrated Yunnan-Burma road was for many years the only land route from China to the Indian and Pacific Oceans. Population 10,853,359, many being Muslims. See Ledo Road.

Yuriev. Russian name of the Estonian town of Tartu (q.v.).

Yusafzai. Pathan tribes of the Indo-Afghan frontier. Iranian Aryans, their N. Pushtu dialect was the first to receive a literary garb (15th century). They extend along the Kabul river into the Peshawar dist. N. of the allied Mohmand.

Yverdon (anc. Ebrodunum). Town of Switzerland, in the canton of Vaud. It stands at the S.W. end of Lake Neuchâtel, near the influx of the river Orbe or Thièle, 20 m. by rly. N. of Lausanne. Pop. 10,865.

Yukon. Map of the gold-mining territory of Canada

THERE was an ancient Egyptian hieroglyph representing a duck  which in the later hieratic form  was simplified to . This was the rudimentary Z of the Roman alphabet, though it went through somewhat surprising changes in its intermediate history. As the Hebrew and Phoenician letter *zayin* (weapons) , the Egyptian duck was barely recognizable.  This form was developed into the classic Greek *zeta*  **I**, which, however, had

an uncial parallel , in which the vertical stroke became a diagonal. The two forms were used in the early Latin alphabets, but disappeared in the 3rd century B.C. The Z form was restored later, when the study of Greek became a mark of culture among the Romans; but by this time it had lost that 7th place which it had held in the Phoenician, Greek, and early Latin alphabets, and was added to the tail end as an extra letter; and so it remains to this day.

Z Final letter of the English and Latin alphabets. It is a soft sibilant, or hissing sound. In the Latin alphabet its use is reserved for Greek words. Its usual English value is that of *s* in *rose*. Nearly all words in modern English beginning with *z* are of foreign origin. See Alphabet; Phonetics.

Zaandam. Town of the Netherlands, in the prov. of N. Holland. It lies on the river Zaan, in the midst of extensive polders, $5\frac{1}{2}$ m. by rly. N.W. of Amsterdam. There are shipyards, and the industries include flour milling, papermaking, and timber sawing. Pop. 40,529.

Zabrze. Town of Silesia. It lies about 45 m. S.E. of Oppeln, and is an important coal-mining and manufacturing centre, with coke furnaces and steel and cable works. Formed in 1905 by the amalgamation of several smaller places, it was renamed Hindenburg, Dec. 4, 1915, in honour of the German general of that name. When the Second Great War began, it had a pop. of 122,000. Taken by assault Jan. 26, 1945, by Marshal Koniev's 1st Ukrainian army, it was in the part of Germany placed under Polish administration in 1945 by the Potsdam agreement, when it reverted to its old name of Zabrze. Pop. 104,184.

Zacatecas. Central state of Mexico. Forming part of the great central plateau, it has a mean alt. of 7,750 ft. It has valuable silver mines, and copper, lead, and quicksilver are also largely worked. Some cereals, sugar, and fruit are grown. Area, 28,122 sq. m. Pop. 565,437. Zacatecas, the capital, is a centre of the mining industry, 65 m. N. by W. of Aguascalientes.

Zacharias. Father of John the Baptist, mentioned in Luke 1. A priest, he expressed disbelief in the message of Gabriel concerning his future son, and was struck dumb, but after the circumcision of John recovered his speech, to prophesy in the words of the Benedictus.

Zacharias (d. 752). Pope 741-752. A Greek of Calabria, he secured by personal influence the

protection and restoration of papal territory from Liutprand, king of the Lombards, and made S. Boniface his papal legate in Germany. He died in Rome, March 14, 752, and was later canonised.

Zadar (Ital. *Zara*). Seaport of Yugoslavia, on the Dalmatian coast, 72 m. N.W. of Split. The Roman Jadera, it came under Venetian domination in the 12th century, and was lost and regained by Venice a number of times. Seized by Austria in 1813, it became the capital of Dalmatia under the Austro-Hungarian monarchy. By the treaty of Rapallo (*q.v.*) it was assigned to Italy, which ceded it to Yugoslavia under the peace treaty of 1947. The round church of S. Donatus was built in the 9th century over the pavement of the Roman forum. The Romanesque cathedral dates from the 12th century, the tower being finished in 1893; the church of S. Francis was begun in 1212 on the site of a church which existed from 906; and the loggia which houses the municipal library was constructed in 1565. The object of a number of Allied attacks from the air during the Second Great War, Zadar was captured by Marshal Tito's forces after three days' fighting on Nov. 2, 1944.

Zadkiel. Pseudonym of Richard James Morrison (1795-1874), writer on astrology. Born June 15,

1795, he entered the navy in 1806 becoming lieutenant in 1815; served in the coastguard, 1827-29; and in 1831 founded *The Herald of Astrology*, known later as *Zadkiel's Almanac*. Also author of controversial works on astronomy, he died April 5, 1874.

Zadok. Biblical character. A priest in David's reign, he remained faithful during the revolt of Absalom (2 Sam. 15), and was raised by Solomon to the high priesthood (1 Kings 2). This office was held by his descendants until the rise of the Maccabees. *Zadok the Priest* is the title of an anthem composed by Handel for the coronation of George II.

Zafrin, ZAFFARINE, OR CHAFARNAS. Islands off the N.E. coast of Morocco. Occupied by the Spanish government in 1848, they are situated near the mouth of the Muluya and the Algerian frontier.

Zagazig. Town of Egypt. A rly. junction, it is situated 40 m. W. of Ismailia, and is the centre of a large trade in cotton. Near by are the remains of the ancient Bubastis (*q.v.*). Pop. 82,912.

Zagreb (Ger. *Agram*; Hung. *Zágráb*). Second city of Yugoslavia. The ancient Croatian capital, it stands near the left bank of the Save, 75 m. N.E. of Fiume, with which there is rly. connexion. Its chief buildings include the 15th century Gothic cathedral, archi-

Zagreb, Yugoslavia. General view of the ancient Croatian capital and second city of Yugoslavia

episcopal palace, palace of the ban or governor, university founded in 1874, and natural history museum. Divided into three parts—the episcopal, upper, and lower towns—it manufactures leather, linen, carpets, rly. wagons, etc., and trades in wine, cereals, hides, potash, porcelain, and silk. Pop. 185,581.

Founded 1093 by Ladislav I, Zagreb became a royal free city in 1242, and the capital of the Hungarian prov. of Croatia-Slavonia in 1867. In 1918, when the Austro-Hungarian empire was breaking up, a Croatian provisional govt. was set up here. Zagreb suffered from earthquakes in 1880 and 1901. The city was in German occupation and was bombed by the Allies during the Second Great War. Marshal Tito's forces entered it May 8, 1945. A new road from Zagreb to Belgrade was completed 1949.

Zaharoff, SIR BASIL (1849-1936). Anglo-Greek financier. Basilios Zacharias was born Oct. 6,

Sir Basil Zaharoff,
Greek financier

1849, a Turkish subject of Greek extraction, at Mughla, Anatolia. After a chequered career, allegedly as a pedlar, guide, and agent for European goods at Constantinople (Istanbul), he became in 1877 the employee of a British firm of armament makers, negotiating sales of weapons in the Near East. In contact with Maxim, whose machine-gun Zaharoff helped to introduce, he won a leading position from 1897 in the Vickers-Maxim combine and was counted among Europe's richest men. For lavish contributions to the propaganda of the Entente and for rearming Russia and smaller allies during the First Great War, he was knighted in 1919. His influence was said to have helped persuade the British govt. to support the Greek attack on Turkey. In the 1920s he financed Rumanian loans and oil enterprises, held a big share in the Anglo-Persian Oil co., and bought up the bank and casino at Monte Carlo. Rumour connected "the mystery man of Europe" with many minor wars and revolts; but in Greece his machinations were evidently due to sincere attachment that made him spend huge amounts irrespective of potential gains. He was in personal touch with Venizelos, as well as Lloyd George, Clemenceau, and Briand. Founder of chairs of

aviation at London, Paris, and Leningrad, and of French literature at Oxford and English at Paris, he was honoured by many countries. He later lived mostly on the Riviera, where he died Nov. 27, 1936. *Consult* Z., Armaments King, R. Neumann, 1935.

Zamia. Large divided leaves and cone of *Z. furfuraceae*

Zama. City in the Roman prov. of Numidia. It was five days' march S.W. of Carthage, near Sica Veneria (El Kef), and was the scene of the defeat of Hannibal by the younger Scipio in 202 B.C., which ended the second Punic War.

Zambezi or **ZAMBESI**. River of Africa. Its headstreams rise in N. Rhodesia, Belgian Congo, and Angola, near those of the Kasai, a large affluent of the Congo, and it flows with a great double curve to its deltaic mouth in Mozambique on the E. coast of the continent. Above Victoria Falls (*q.v.*) the river flows over a level plateau, savanna in character; below the falls it traverses gorges and ravines; from Kebrahasa Rapids it is navigable for 400 m. to its mouth, where is a delta covering 2,500 sq. m. Its length is 1,600 m. The chief affluent is the Shiré (*q.v.*). In 1935 was opened the Lower Zambezi rly. bridge (4,021 yds., the longest in the world), connecting Nyasaland with Beira. *See* Africa.

Zambezia or **ZAMBESIA**. Prov. of Mozambique. It consists of two portions joined together by a narrow strip of country N. of the Zambezi, and includes the Tete dist. and the old dist. of Quillimane, with that seaport its chief town. It adjoins N. and S. Rhodesia and Nyasaland. The Trans-Zam-

bezia rly. connects Beira with the Nyasaland system (*v.s.*). Area, about 70,000 sq. m.

Zambrà, JOSEPH WARREN (1822-97). Anglo-Italian meteorologist. Born in Italy, he was brought to England as a child. In 1850, in partnership with Negretti (*q.v.*), he set up the famous meteorological instrument business on Holborn Viaduct, London. He died at Hampstead Dec. 23, 1897, leaving a large fortune.

Zamenhof, LUDWIG LAZARUS (1859-1917). Polish etymologist, the creator of Esperanto (*q.v.*). Of Jewish parentage, a native of Bialystok, he was by profession an oculist, but is known for his creation of what was designed to be a universal language. He died in Warsaw, April 14, 1917. *Consult* Life, E. Privat, Eng. trans. 1931.

Zamia. Genus of perennial palm-like or fern-like plants of the family Cycadaceae. They are natives of tropical America and the West Indies. The leaves are produced one at a time, and form a crown. In some species they are 8 ft. or more in length. The fruit is in the form of cones.

Zamora. Inland prov. of N.W. Spain, in Leon. It is bounded N. by the Sierra de Peña Negra, and W. by Portugal and the Spanish prov. of Orense. Mainly a hilly plateau, its lowest point is 1,070 ft. alt. In the N.W. is the Sierra de la Culebra, and the prov. is drained by the Douro and its tributaries. In the highlands merino sheep and goats are reared; in the valleys wheat, pulse, vines, and flax are grown. Zamora is the capital. Area, 4,082 sq. m. Pop. 311,450.

Zamora. City of Spain, capital of the prov. of Zamora. It stands on the river Douro, at an alt. of more than 2,000 ft., at the junction of rlys. from Salamanca, Medina del Campo, and Astorga, 31 m. N. of Salamanca. It has an 8th century citadel, a 14th century bridge over the Douro, and several 12th

Zamora, Spain. The cathedral, showing the ruins of the old bridge across the Douro

century churches, including a Romanesque cathedral. It trades in agricultural produce and manufactures linen. During the Peninsular War it suffered severely at the hands of the French, 1808-09. Pop. 18,000.

Zanesville. City of Ohio, U.S.A., the co. seat of Muskingum co. It stands at the confluence of the Licking and Muskingum rivers, 60 m. E. of Columbus, and is served by the Baltimore and Ohio and other rlys. It is one of the chief centres making clay products; glassware, steel goods, and electric transformers are also produced. Coal is mined in the locality. Settled in 1800, Zanesville was the capital of Ohio 1810-12, was incorporated in 1814, and became a city in 1850. Pop. 37,500.

Zangwill, ISRAEL (1864-1926). British novelist. A London Jew, born Feb. 14, 1864, he attended

Israel Zangwill
Russell

London university, and became an elementary school teacher in Spitalfields. The foundation of his literary reputation was his series of masterly studies of Jewish life, of which

Children of the Ghetto, 1892, is best known. His other works include Ghetto Tragedies, 1893; The King of Schnorrers, 1894; The Master, 1895, considered by some his finest work; Ghetto Comedies, 1907; The War for the World, 1917; Chosen Peoples, 1918; Jinny, the Carrier, 1919. Among his plays are Merely Mary Ann, 1903; The Melting Pot, 1908; The War God, 1911; The Next Religion, 1912 (which was banned); Too Much Money, 1918; The Voice of Jerusalem, 1920. Zangwill was founder and first pres. of the international Jewish territorial organization. He died Aug. 1, 1926.

Zante. Italian and more familiar name of the island of Zakynthos. Called the golden island, and third largest of the Ionian Is., it is a department of Greece. Wine, olives, and currants are exported, and carpets manufactured. The chief town, on the E. coast opposite Morea, is also named Zante. Pop., island, 44,750; town, 11,609.

Zanzibar. British protectorate, island, and city off the coast of Tanganyika, E. Africa. The protectorate comprises the islands of Zanzibar and Pemba, and a coastal

strip in Kenya protectorate. The pop. is over 250,000; in round figures there are on Zanzibar Island 150,000, and on Pemba 100,000, or by groups 200,000 Africans, 34,000 Arabs, 16,000 Indians, 250 Europeans.

The island of Zanzibar is situated in lat. 6° S. and long. 39° E. It is separated from the mainland by a channel 22½ m. wide at its narrowest. About 53 m. long by 24 m. wide, it has an area of 640 sq. m., the largest coralline island on the African coast. Pemba lies 35 m. N.E.; it is 42 m. long and 14 m. wide, with an area of 372 sq. m. Features of a tropical climate are extreme heat during monsoon changes, and annual rainfall in Zanzibar of 58.59 ins. and in Pemba of 73.25 ins. Mean temperatures vary from 77° F. in July to 83° F. in Jan.

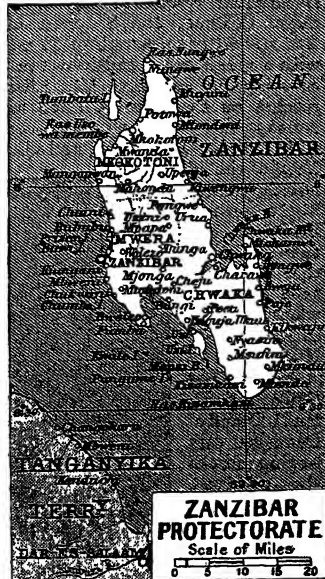

The city of Zanzibar is 25 m. almost due N. of Dar-es-Salaam, on the W. coast of the island, with one of the finest natural harbours in the world, and a pop. est. at 50,000. A fascinating city with an aspect more Oriental

than African, it has narrow, winding, cobbled thoroughfares, also many fine buildings including the sultan's palace on the sea front. The great harbour is now used mostly by coastal vessels. Zanzibar was long the h.q. of the slave trade. The protectorate depends on agricultural products, of which the chief is cloves, introduced in 1830. Four-fifths of the world's supply of cloves normally comes hence, but the "sudden death" virus disease is a continuing menace. Other products are copra, mangrove bark, chillies, citrus, and cacao. There are many cattle, especially in Pemba.

Zanzibar flourished when the Pyramids were being built, for it was the centre of the then known S. hemisphere. Before the Christian era it probably did a steady trade with the Assyrians, Egyptians, Hindus, Greeks, and Arabians. It was practically unknown to Europeans until in 1497 Vasco da Gama sailed round the Cape and incidentally rediscovered it. In 1503 Zanzibar was made subject to Portugal. The first recorded visit of an English ship was in 1591. Zanzibar

was later governed by rulers from Oman on the Persian Gulf, among whom Ahmed bin Said Al-Busaid in 1744 set up the dynasty which has ever since occupied the throne.

In 1856 Zanzibar and the adjacent African territories were declared independent; this included Pemba and a coastal strip some 10 m. wide. In 1890 the islands were declared a British protectorate. The mainland strip was divided, Germany securing the sultan's rights over the portion along the coast of German E. Africa (now Tanganyika Territory), and Italy obtaining control over the portion on the coast of Somaliland. Great Britain paid rent to the sultan for the coast portion of British E. Africa (now Kenya Colony). In 1906 the government of the British protectorate was reorganized, and in 1914 control passed from the foreign to the colonial office; since 1925 administration has been the responsibility of a British resident, who presides over the island's legislative council. In

Zanzibar. Map of the islands off the East African coast, since 1890 a British protectorate

1920 the mainland portion became the Kenya Protectorate. The sultan, Seyyid Sir Khalifa bin Harub (b. 1879), came to the throne in 1911. These are executive and legislative councils.

Bibliography. Zanzibar, Sir R. F. Burton, 1872; Pemba, J. E. E. Craster, 1913; Z., Past and Present, F. B. Pearce, 1920; Z., Its History and Its People, W. H. Ingrams, 1931.

Zanzur. Oasis of Libya, about 9 m. S.W. of Tripoli. The chief products of the region are dates, olives, figs, pomegranates, and almonds. Italians defeated Turkish forces here Sept. 20, 1912.

Zapata, EMILIANO (c. 1880-1918). Mexican bandit. A Guerrero Indian, he organized in 1910 a band of some 1,000 Indians who joined Villa and Madero in the revolt which overthrew Diaz. For seven years he was perhaps the most powerful bandit the world has seen: he led a disciplined force of 20,000, created or controlled the presidents, and held sway over most of the country. Licentious, treacherous, and cruel, he is said to have ordered the execution of 11,000 persons and done damage amounting to £50,000,000. He was finally slain by an officer of President Carranza. Consult The Criminal Jester, H. H. Dunn, 1934.

Zaporozhe. City of Ukraine S.S.R., centre of a region of the same name. A city built after the revolution, and embracing the older Alexandrovsk (pop. 5,000), it lies on the left bank of the Dnieper 125 m. N.W. of Mariupol, and is an important junction of rlys. and waterways. Here in 1932 the great Dnieper Dam (*q.v.*), which traverses the island of Khortitsa, once a famous Cossack settlement, was completed; and here is centred the largest aluminium-producing plant in the U.S.S.R. Power generated in 1947 served more than 2,500 collective farms and some 300 machine and tractor stations, as well as industrial plants over a wide area. The Russians did not defend Zaporozhe during the Second Great War, evacuating it in Aug., 1941, after breaching the dam. The Germans made it the centre of a strong defensive system, the Russians retaking it by storm Oct. 14, 1943, only after a bitter battle in which many Germans were drowned while trying to escape across the Dnieper. Pop. (1939) 289,000.

Zapotec. An American Indian tribe in Oaxaca, Mexico. Numbering some 200,000, they are descended from a people once dom-

inant in Mexico (*q.v.*) before the Spanish conquest.

Zara. Italian name of a seaport of Dalmatia, considered in this work as Zadar (*q.v.*).

Zaragoza. Spanish form of the name of the city of Saragossa (*q.v.*).

Zarathustra. Founder of the religion of ancient Persia and the Parsees, called also Zoroaster (*q.v.*).

Zarephath or **SAREPTA.** Town of Zidon or Sidon (1 Kings 17, v. 9; Luke 4, v. 26). It was on the Mediterranean, between Tyre and Sidon, near the modern Sarafond. Elijah tarried here during a drought, and here took place the miracle of the widow's barrel of meal and cruse of oil.

Zaria. Prov. of N. Nigeria. It is bounded N. by the French colony of the Niger, and lies between the provs. of Sokoto (W.) and Kano (E.). The S.E. is hilly and contains extensive deposits of tin. It is watered by the Kaduna river and its tributaries. Kaduna is near the middle of the prov., which is traversed by the Iddo-Kano rly. and other lines. Zaria, like the rest of Hausaland, fell under the Fula domination in the early 19th century. In 1902 it was occupied by the British. The town of Zaria, alt. 2,090 ft., is situated on the main rly., 97 m. S.W. of Kano.

Zea. Italian and more familiar name of the Aegean island of Ceos, one of the Cyclades group of the Grecian Archipelago. It is situated about 13 m. E. of Cape Colonna, the S. point of Attica, and has a length of 13 m., with a maximum breadth of 8 m., covering 39 sq. m. Mt. Elias reaches an elevation of 1,860 ft. Among the chief products are wine, figs, lemons, cotton, and silk.

Most of the inhabitants dwell in the town of Zea (the ancient Iulis), in the middle of the island, whose harbour is Port St. Nikolo.

Zealand (Dan. Sjaeland). Island of Denmark containing most of the capital, Copenhagen, and six provinces. Its maximum length from N. to S. is about 80 m., and its greatest

breadth is 66 m., the area being situated between the Great Belt and the Sound, its N.E. part being barely 3 m. from the coast of Sweden. To the N. is the Kattegat, and to the S. are grouped the islands of Laaland or Maribo, Falster, and Møen, which separate Zealand from the Baltic Sea. The coastline is extremely irregular and much indented. The principal openings are Sejerø Bay on the N.W., Ise Fjord on the N., Kjøge Bay on the E., and Faxe Bay on the S.E. The surface is low, nowhere exceeding 400 ft. alt. Chief occupations are dairy farming and horse and cattle rearing. The largest towns besides the capital are Roskilde, Elsinore, Slagelse, Naestved, Holbaek, Korsør. Pop., rather over a million.

Zealots. Jewish sect. It was founded by Judas of Gamala or of Galilee, who led the revolt against the census of Quirinius. Claiming descent from the Maccabees, the Zealots were stern advocates of Mosaic law, bitterly opposed Roman domination, and figured prominently in the great rebellion and the siege of Jerusalem. The term zealot was applied to Simon the Canaanite (A.V.) or Cananaean (R.V.), to distinguish him from Simon Peter (Matt. 10; Mark 3; Luke 6). The term zealot is now used for enthusiast, fanatic, and bigot, according to circumstances.

Zebra. Group of animals of the horse family, found only in Africa. They are distinguished by the elaborate black striping on their tawny coats. The common or mountain zebra (*Equus zebra*) occurs in S. Africa, and is heavily and broadly striped. It became almost extinct in Cape Colony once,

Zebra. Grévy's species, distinguished from the common zebra by its larger size and closer stripes. Gambier, Bolton, F.Z.S.

but is now increasing under protection. Grévy's zebra occurs in Somaliland and Shoa, and is considerably larger than the mountain species. The ground colour of its pelt is almost white, and the stripes are very narrow and numerous. A rare species, Foa's zebra, confined to the mountains of the Zambezi dist., has many narrow and peculiarly arranged stripes. Burchell's zebra (*E. Burchelli*), found on the S. African plains, resembles the quagga (*q.v.*), and has a tail like that of a horse.

Zebu (*Bos Indicus*). Humped species of horned cattle. They are

interrupted by an invasion of the sea from the E. as far as the Pennines, when the Magnesian Limestone series was deposited. In Durham marls with salt, gypsum, and anhydrite were laid down. The German salt and gypsum beds date from this time. In addition there was formed a thin bed of copper-bearing shale.

Zedekiah. Last king of Judah. The youngest son of Josiah, he was placed on the throne in 597 B.C. by Nebuchadrezzar when Jehoiachin was taken captive to Babylon. He was 21 years old when he became king, and his reign lasted for 11 troublous years. Against the warnings and advice of Jeremiah, he joined in an intrigue against the king of Babylon, whose vassal he was, with the result that Jerusalem was stormed and Zedekiah taken captive. His eyes were put out, and he spent the rest of his life as a prisoner at Babylon.

Zedoary (*Curcuma zedoaria*). Perennial herb of the family Zingiberaceae. A na-

tive of the Himalayas, it has tuberous roots, and broad leaves which are silky beneath. The yellow tubular flowers are produced in spikes. The tubers are used for making a perfume and as an aromatic tonic; *C. aromatica* is used for similar purposes. Rhizomes of *C. longa* yield turmeric, an ingredient of curry powder.

Zeebrugge.

Town of Belgium, in the prov. of W. Flanders. It lies on the coast 8 m. by rly. N. of Bruges at the mouth of the canal which links Bruges with the sea. Good harbour facilities, mainly constructed 1895-1907, greatly increased the value of Bruges as a port, and the Zeebrugge mole protecting the harbour curves

crescent-wise for a length of $1\frac{1}{2}$ m. A train ferry service with Harwich was opened in 1924. Zeebrugge played an important part in the First Great War. Here the 3rd British cavalry division landed on Oct. 8, 1914. In German occupation from a week later it became a centre of the coastal defences and a submarine base. It became famous by the British attack of April 23, 1918 (*v.i.*). Captain Fryatt's (*q.v.*) ship, the *Brussels*, was taken into harbour by the Germans in June, 1916, and later sunk by them to block the passage, but was salvaged by the Allies in 1919. In German occupation in the Second Great War from May, 1940, Zeebrugge was liberated Sept. 10, 1944, by Canadians who here met no opposition.

ZEEBRUGGE ATTACK, 1918. During the First Great War the mole and harbour works of Zeebrugge were constantly bombarded from the sea and air, notably on May 12, 1917. But immense concrete shelters were constructed by the Germans for their submarines, and these gave them a large measure of security. On April 23, 1918 (S. George's day), a successful attack was delivered by a large British naval force under Vice-Admiral R. Keyes, in which the channel leading into the harbour was completely blocked to submarines and destroyers, by three old cruisers filled with cement, which were sunk in it or off the entrance.

To divert the attention of the Germans and the very powerful coast batteries from the blockships, a feature of this attack was a landing from the old cruiser *Vindictive*, and the Mersey ferry-boats *Iris* and *Daffodil*, on the long, curving mole, while a submarine, charged with explosives, was run in under a viaduct which connected the shoreward end of the mole with the coast, so as to blow it up and isolate the German defenders on the mole.

The first of the blockships, *Thetis*, fouled an obstruction near the entrance to the canal and had to be sunk, as she became unmanageable. But the other two, *Intrepid* and *Iphigenia*, pushed into the canal and were so sunk that they prevented all passage for anything larger than a fishing boat. The *Vindictive*, when this work had been accomplished, succeeded in withdrawing with the two ferry-boats, taking with her a quarter of a ton of masonry from the mole which fell on board.

The casualties in this brilliant operation, including an attack on

Zebu. Domesticated ox, used for draught purposes in India, on account of its immunity from tropical diseases
Gambier Bolton, F.Z.S.

Zedoary. Aromatic tuberous roots and spike of flowers

Zechstein. In geology, the upper division of the Permian System (*q.v.*). In England it was a period of desert conditions in-

Ostend, were light in view of the magnificent service rendered and the extraordinary heroism displayed: 188 officers and men were killed or fatally wounded: 384 were wounded; and 16 were missing. Zeebrugge was sealed up for the rest of the war at this price. The men engaged in the blockships and landing parties were all volunteers. The British loss in ships was 1 destroyer, 2 coastal motor boats, and 2 launches. On April 23, 1925, the king of the Belgians unveiled a memorial on the mole. This is a granite pillar 75 ft. high supporting a figure of S. George.

Zeeland. Prov. of the Netherlands. It lies in the S.W. of the country, on both sides of the Schelde estuary, and consists of the islands of Walcheren, N. Beveland, S. Beveland, Tholen, St. Philipsland, and Schouwen to the N., Zeeland Flanders to the S., of the estuary. It is bordered on the N. by S. Holland, on the E. by N. Brabant, on the S. by Belgium, and on the W. by the North Sea. The low-lying land, much of it reclaimed from the sea, is fertile. Corn, vegetables, particularly chicory, flax, and fruit are grown; stock farming and dairying are important. Middelburg, on Walcheren island, is the capital; and in normal times Flushing, which is connected by a rly. across the islands with Bergen-op-Zoom on the mainland, is an important port. Connexion between Zeeland Flanders and the rest of the Netherlands is by free ferry across the Schelde from Terneuzen to Hoedekenskerke, served by a branch rly. from Goes. Rlys. serving Zeeland Flanders pass through Belgium.

Zeeland became part of the county of Holland in 1256, was one of the 17 provs. of the Low Countries under Charles V, and joined the union of Utrecht in 1579. It was the home of many of the navigators of the great age of exploration, and seafaring and fishing remain among the chief occupations of its hardy people. Its area is 690 sq. m. Pop. 258,510.

During the Second Great War the Dutch army made its last stand in Zeeland Flanders in 1940; and the prov. was the scene of violent fighting in 1944, described under Schelde and Walcheren.

Zeeland, PAUL VAN (b. 1893). Belgian economist and statesman. Born at Soignies, Nov. 11, 1893, he was educated at Louvain and Princeton universities. Professor of law at Louvain, in 1929 he became

economic adviser to the Belgian govt., and paid a visit to Russia. In 1934 van Zeeland was made cabinet minister without portfolio; on March 25 next year premier and minister of foreign affairs in a coalition. This govt. resigned in 1936, but he soon formed a new administration, and presided at the assembly of the League of Nations. In 1937 he successfully fought a bitter by-election in Brussels against the Rexist leader, Léon Degrelle, also securing a vote of confidence in parliament, but resigned on Oct. 25. Van Zeeland undertook at the request of the British and French govts. an international economic mission, publishing his findings in *Economics or Politics*. When the Germans invaded Belgium in May, 1940, he went to Great Britain and worked for refugee organizations. Returning home in 1944, he was appointed Belgian commissioner for repatriation, and elected senator. He was foreign minister Aug., 1949–March, 1950, and from April, 1950.

Zeeman, PIETER (1865–1943). Dutch physicist, born at Zonne-maire, May 25, 1865. At 32 he became lecturer at Leyden, and in 1900 professor of physics at Amsterdam, becoming director of the physical institute there in 1908. Zeeman carried out much research work on the inter-relationship between magnetism and light, discovering what became known as the Zeeman effect (*v.i.*). As a result of this work he shared the Nobel prize for physics in 1902 with Lorentz.

Zeeman Effect. In physics, effect associated with the splitting up of the lines of a line spectrum into definite components when the light source is placed in a strong magnetic field. The nature of the splitting up provides information regarding inter-atomic forces.

Zeerust. Town of Transvaal, S. Africa. It is 149 m. by rly. W.N.W. of Johannesburg, and is situated in the fertile Marico valley, a dist. suitable for fruit growing, rich in minerals, and raising cereals and cotton. The Anglican church is said to be the oldest in Transvaal. Pop. 4,046.

Zeiss, CARL (1816–88). German optician. He was born at Weimar, Sept. 11, 1816, and intended to train as a doctor, but became interested in the science of optics, and in 1846 founded at Jena the business making optical instruments, which, when incorporated in 1889 as Carl Zeiss-Stiftung, had become world-famous for its lenses, binoculars, cameras, etc. He

devoted himself to business almost until his death, Dec. 3, 1888.

Zemstvo. Elective assembly of the former Russian empire. By the constitution established in 1864, district zemstvos, and a provincial zemstvo composed of delegates from all the zemstvos of a province or government, were created. In 1890 their functions were restricted and power passed to the provincial governor. With the introduction of Soviet government, zemstvos disappeared. *See* Russia; Soviet.

Zemun (Ger. Semlin). Former town of Yugoslavia, now part of Belgrade. It is on a tongue of land between the Save and the Danube. Here the Vienna-Istanbul rly. bridges the Save to reach Belgrade. The Germans fought desperately to hold this bridge against the Russians and Yugoslav partisans in Oct., 1944, and it was forced, and Zemun captured, only on the 22nd, two days after the fall of Belgrade. John Hunyadi's castle, in which he died in 1456, is in ruins. Close by is the monument erected in 1896 to commemorate the millennium of the kingdom of Hungary. Zemun was prominent in the First Great War.

Zenana (Persian, *zanana*, from *zan*, woman). Term used for a Hindu harem, *i.e.* for the apartments in which the women of a family are secluded, and also for the women.

Zend. Name usually given to the language of the Zend-Avesta. But as the word *zend* by itself means only commentary, the name Avestic or old Bactrian is preferred. The language belongs to the Iranian group of the Aryan branch of Indo-European.

Zend-Avesta. Name by which the sacred books of the Parsees are known in the West. Correctly, the name should be Avesta and Zend, Law and Commentary. Written originally in Zend, a language allied to Sanskrit, translated into Pahlavi about the 3rd century A.D., and later into Pazend or Parsee, what exists is regarded as a fragment, the rest having been destroyed during the conquests of Alexander, 330–327 B.C., and the Arab invasion of Persia, A.D. 651. Attributed in part to Zoroaster, but as to form and arrangement to about A.D. 230, the work includes a composite liturgical manual for the use of the priests, and hymns, etc. *See* Zoroaster; Zoroastrianism; *consult also* trans., in *Sacred Books of the East*, J. Darmesteter and L. H. Mills, 1880–87; Pahlavi Texts, trans. E. W. West, 1880–97.

Zenith (Old Fr. through old Span. from Arab. *semt*, way). Upper pole of the horizon, the point in the celestial sphere vertically above the observer. It is also defined as the point at which a vertical plumb prolonged upwards meets the celestial sphere. The word commonly denotes an extensive stretch of sky overhead. Magnetic zenith is indicated by the upper end of a needle freely suspended about a horizontal axis. *See* Nadir.

Zenjan OR ZINJAN. Town of Persia. The capital of the prov. of Kameh, it is about 80 m. S.W. of Resht on the Caspian.

Zeno (b. 490 B.C.). Greek philosopher. He lived at Elea in Italy, and belonged to the Eleatic school (q.v.). Friend and associate of Parmenides (q.v.), he is chiefly remembered as the author of the famous paradoxes of Achilles and the Tortoise (q.v.) and the Arrow (q.v.). The discussions provoked by these and similar puzzles proved the beginnings of what is known as the dialectic or question-and-answer method of arriving at a solution of philosophical problems.

Zeno (c. 340-264 B.C.). Greek philosopher, founder of the Stoic school of philosophy, and known as Zeno of Citium, a town in Cyprus. For some years he was a merchant, but having lost his property by shipwreck on a journey to Athens, he settled there and decided to devote himself to philosophy. In succession an adherent of the Cynic, Megarian, and Academic schools, but dissatisfied with each, about 310 he founded a new system and a school of his own at Athens. He opened his school in the Stoa Poikilē (painted porch), and was its president for forty-six years. *See* Stoicism.

Zeno (426-491). East Roman emperor, 479-491. An Isaurian by birth, he became chief of the bodyguard of Leo I, whose daughter Ariadne he married. Their son Leo II, for whom Zeno acted as regent, soon died, and Zeno in 474 was left sole ruler. He was not popular and, through the intrigues of Verina, widow of Leo I, her brother Basiliscus was proclaimed emperor. Zeno fled to Isauria, but the people soon tired of Basiliscus and Zeno was reinstated. During the last part of his reign he was frequently in collision, if not actually at war, with the Ostrogoths of Moesia, but averted the menace by persuading Theodoric the Goth to attack Odoacer in Italy.

Zeno, APOSTOLO (1668-1750). Italian poet and historian. He was

born in Venice, Dec. 11, 1668, and became the chief dramatic poet of his time in Italy. In 1710 he assisted in founding the *Giornale dei Letterati d'Italia*, and conducted it until in 1718 he was appointed poet laureate to the court opera and imperial historiographer at Vienna. He wrote and produced 60 operas, besides comic operas for music by Handel and Pergolesi among others; was the author of many shorter poems; and edited Venetian and Latin historians. His dramas were published in ten volumes in 1744. Zeno died Nov. 11, 1750.

Zeno, NICCOLO (fl. 1375-91). Venetian navigator. He and his brother Antonio visited Greenland, and on the return journey found land which people have attempted to identify as New England, Labrador, or Newfoundland. An account of their voyages was published in Venice, 1558.

Zenobia. Queen of Palmyra, 267-272. Famed for beauty and strength of character, she was the wife of Odenathus (q.v.), and after his assassination became regent for her son, Vaballath, choosing as her ministers the Greek rhetorician Longinus and Paul of Samosata, bishop of Antioch. Her ambition was to carve an empire out of the Roman dominions in the East; and while Claudius II was repelling an invasion of the Goths, she occupied Egypt, and after Aurelian had been defeated by the Goths, she proclaimed her son Augustus. Aurelian marched against Zenobia, defeated her at Emesa, and took Palmyra, 272. The queen was taken prisoner, but Aurelian spared her life, and after gracing his triumph she spent her remaining years in retirement at Tibur. *See* Palmyra.

Zenta. Hungarian, more familiar form of the name of the Yugoslav town Senta. It stands on the right bank of the Tisza (Theiss), 33 m. by rly. S. of Szeged. Pop. 31,969. Zenta is famous for the battle fought Sept. 11, 1697, between the emperor's troops under Prince Eugene and the Turks. Each side is said to have numbered about 100,000 men, and after a hard struggle the Turkish army, with which the sultan was present, was virtually destroyed.

Zeolite. The name given to a family of minerals. They are hydrated silicates of calcium and aluminium, sometimes with sodium and potassium. The members of the group include analcite, apophyllite, chabazite, prehnite, stilbite, natrolite, and others. They

generally result from the secondary alteration of feldspars and aluminous minerals of igneous rocks, but may also be deposited from the watery solutions emanating during the later stages of the cooling down of igneous magmas; then they are often connected with ore deposits. Zeolite minerals are generally found filling cracks and cavities in basalts, etc., also as a gangue in some veins.

Zephaniah. Minor O.T. prophet active in the days of King Josiah. A son of Cushi, he was probably of the royal house. His short book has been described as a compendium of prophecy, dealing first with universal judgement for sin, and then briefly with universal salvation.

Zephyrus. In Greek mythology, the personification of the west wind. He was a son of Eos, the dawn, and was regarded as beneficent to sailors, as opposed to such violent winds as Aquilo, the N.E. wind. *See* Venti.

Zeppelin, FERDINAND, COUNT VON (1838-1917). German airship designer. Born at Constance,

Count Zeppelin, German airship designer

July 8, 1838, he was educated at Stuttgart for the army and joined it at 20. In 1863 he fought in the American Civil War on the Union side. Returning to Germany, he saw active service in the wars of 1866 and 1870-71. Retiring from the army as general in 1891, he devoted the remainder of his life to aeronautics. In 1899 he formed a company and built his first floating airship dock. For some years he continued airship construction until in 1906 he made a successful flight of 60 m. in two hours. The German gov. then came to Zeppelin's help, and in 1908 his first airship passed the government's tests, but was wrecked. Many rigid airships of this class were later built at Friedrichshafen. Zeppelin had envisaged the use of airships in war for reconnaissance but not for attack. They were, however, used by the Germans in the First Great War in bombing expeditions against the U.K., where their inventor's name became a household word in consequence. Zeppelin died March 8, 1917. *See* Air Raids; Airship; Eckener; Graf Zeppelin; Hindenburg. *Consult* Z., the Man and His Work, H. Eckener, Eng. trans. 1938.

Zerafshan OR KARA-DARIA. River of Soviet Central Asia. Rising in the mts. of Zerafshan, Tadzhik S.S.R., it flows W. into Uzbek S.S.R., through Samarkand, passes Bokhara on the W., and loses itself in the sand near the Amu-Daria (Oxus), after a course of 470 m.

Zerbst. Town of Saxony-Anhalt, E. Germany, on the Nuthe, 22 m. S.E. of Magdeburg. The chief buildings are the church of S. Nicholas and the town hall, both of the 15th century. The buildings of three religious houses still stand, but all are used for secular purposes. The palace, once the residence of the princes of Anhalt-Zerbst, contains the archives. The town retains parts of its walls, has some picturesque old houses, and in its market-place a bronze figure known as the butter girl, and a Roland column. Machinery, beer, soap, starch, and chemicals are manufactured. Zerbst was a flourishing town in the Middle Ages. It has belonged to Anhalt since 1307, and during 1603-1793 was the capital of the little state of Anhalt-Zerbst. Overrun at the end of April, 1945, by the U.S. 9th army, it came after the surrender of Germany within the Russian zone of occupation. Pop. 24,000.

Zermatt. Village and tourist centre of Switzerland. In the canton of Valais, it stands in a valley surrounded by mountains, at an alt. of 5,315 ft., 22 m. by rly. S. by W. of Visp. Near the base of the Matterhorn and the beautiful Monte Rosa, it is the starting point of the rly. to the Gornergrat (*q.v.*), on the route over the Théodule Pass to Val Tournanche in Italy. Pop. 1,200.

Zero. Mathematical symbol which signifies the absence of quantity or number. It is written 0, and its appearance as a printed symbol is not known before the 7th or 8th century, although it was probably introduced into Hindu mathematics as early as the 5th century. In thermometry it is used as one of the fixed points of temperature.

Zero, ABSOLUTE. In physics, a temperature of -273.13°C. , at which a body would possess no heat energy. At this temperature the molecules of a gas would theoretically exert no pressure on the sides of a containing vessel; but in practice all gases become liquids or even solids at temperatures above this. Absolute zero has not been reached, but Onnes arrived within 3° of it

by allowing liquefied helium to boil, and W. F. Giauque reached as low as $0.05^{\circ}\text{Kelvin}$ by adiabatic magnetisation. *See* Heat.

Zero Hour. Military term to denote the precise, prearranged time for a troop movement, particularly the launching of an attack and of the relevant artillery barrage, extensively used during the First Great War. *See* D-day.

Zeser, ZOSER, OR TCHESER (*fl.* 2960 B.C.). Egyptian ruler. Son of Khasekhemui, he was the second king of the IIIrd dynasty. During his prosperous reign the boundaries of Egypt were extended above the first cataract of the Nile. Besides many temples he built the earliest pyramid, that of stone at Sakkara (*q.v.*).

Zetland, MARQUESS OF. British title borne since 1892 by the family of Dundas. In 1762 Lawrence Dundas (d. 1781), a contractor to the army and M.P., was made a baronet. The family obtained estates in Shetland, and Sir Thomas (1741-1820), the 2nd baronet, was lord-lieutenant of Orkney and Shetland. In 1794 he was made a peer as Baron Dundas, and his son Lawrence (1766-1839) was made earl of Zetland in 1838, this being a variant spelling of Shetland. From him was descended Lawrence (1844-1929), 3rd earl, who during 1889-92 was lord-lieutenant of Ireland, being made a marquess on his retirement. The 2nd marquess has a separate entry (*v.i.*). The eldest son of this peer is called earl of Ronaldshay.

Zetland, LAWRENCE JOHN LUMLEY DUNDAS, 2ND MARQUESS OF (b. 1876). British politician and author. Born June 11, 1876, son of the 1st marquess, and educated

at Harrow and Trinity College, Cambridge, he travelled widely in the Far East, visiting India, where in 1900, as earl of Ronaldshay, he was aide-de-camp to the viceroy; also Persia, Siberia, Japan, and China. The results of his observations were chronicled in several vols., *e.g.* On the Outskirts of Empire in Asia, 1904; An Eastern Miscellany, 1911. He was Unionist M.P. for Hornsey, 1907-16, and governor of Bengal, 1917-22.

Succeeding to the marquessate in 1929, he served on the Indian round table conference and parl. committee. Baldwin made him secretary for India in 1935, and during 1937-40 he combined the office with that of secretary for Burma. He was president of the Royal Geographical society, 1922-25; Royal Asiatic society, 1928-31; then until 1945 chairman of the National Trust. His next post was lord-lieut. of the N. Riding. In 1942 Zetland received the Garter. He published several more books on Asia, and produced the official Lives of Curzon (1928) and Cromer (1932). He brought out an ed. of Disraeli's letters in 1929.

Zeugen. In geology, a type of rock-table found in deserts. It is the product of wind erosion acting on horizontal strata where residual remnants of a hard bed protect and stand above the general level of more easily eroded rocks. The flat zeugen become undercut by wind action, and eventually the hard rock cap tips over. Zeugen may be up to 150 ft. in height.

Zeuglodonts (Gr. *zeuglō*, strap of a yoke; *odon*, tooth). Extinct fossil whale found in the Eocene deposits. The earliest known cetacean, it reached a length of 70 ft., with a long narrow skull and a long body and tail. It swam by means of paddles or flappers.

Zeugma (Gr. *zeugnynai*, to join). Figure of speech, by which one word, especially a verb, is used in connexion with two words or clauses, although it is strictly applicable only to one, a kindred idea being mentally supplied for the other. A famous example is in Pope: *See Pan with flocks, with fruits Pomona crowned.*

Zeus. In Greek mythology, the supreme god, identified by the Romans with Jupiter (*q.v.*).

2nd Marquess of Zetland

Zermatt, Switzerland. The famous tourist centre at the foot of the Matterhorn

Of common Indo-European origin, the name, which means shining, i.e. the sky, is identical with Skt. Dyaus, Lat. Jupiter, and A.-S. Tiw. A god of the weather, especially thunder and rain, Zeus was associated with Thessaly, especially Mt. Olympus. His chief shrine and oracle were at Dodona, where the oak was sacred to him. Son of Cronos (*q.v.*) and Rhea, he dethroned his father, and overthrew the Titans (*q.v.*) and Gigantes (*q.v.*). His chief consort was Hera (*q.v.*), and among his many children were Artemis and Apollo. Zeus was father of the human race. See Olympus.

Zgorzelec. Polish name of the city of Silesia historically known by German name of Görlitz (*q.v.*).

Zhdanov. New name of the Ukrainian seaport more familiar as Mariupol (*q.v.*), given in honour of the politician Zhdanov (*v.i.*), who was born there.

Zhdanov, ANDREI ALEXANDROVITCH (1896-1948). Russian politician. Born at Mariupol, he was the son of a school inspector, and joined the Bolshevik party in 1915. After holding party posts in the Tver and Gorki districts, he succeeded the murdered Kirov as party leader in Leningrad in 1934. In 1938 he was appointed president of the Soviet foreign affairs commission, and as such was a bitter critic of Litvinov. He was appointed secretary of the central committee of the Communist party in 1940, taking charge of propaganda. In the Second Great War Zhdanov was chairman of the Leningrad defence council, and received the rank of colonel-general. In 1944 he became president of the supreme soviet of the R.S.F.S.R., and in 1946 secretary of the Russian Communist party. He signed the Russo-Finnish armistice in Sept., 1944, and until 1947 was chairman of the Allied control commission in Finland.

Zhdanov was one of the chief architects of the Soviet policy of territorial and economic expansion through the creation of satellite states. He was strongly opposed to any compromise with the western powers, and at the founding of the Cominform in 1947 he accused the U.S.A., the U.K., and France of imperialistic aims. He died suddenly in Moscow on

Aug. 31, 1948, and was buried at the foot of the Kremlin wall in Red Square, Moscow.

Zhitomir. Town of Ukraine S.S.R., capital of a region of the same name. The town lies on the Tetenev, a trib. of the Pripet, 80 m. W. of Kiev. First mentioned in 1240, it went to Lithuania in 1320, became the capital of the dist. of Kiev in 1686, and in 1778 was united to Russia. Before the Second Great War it had a pop. of 95,090, including a number of Jews. With 19 Orthodox and three R.C. churches, two synagogues, a Hebrew theatre, and a Jewish printing works where most of the Hebrew books published in Russia were printed, it was a centre of Jewish culture; it had also some manufactures. It is a railway and road junction of some importance. The Germans captured it during July, 1941, after more than a week of fierce fighting. Infantry and Cossack cavalry of Vatutin's 1st Ukrainian army seized it during the night of Nov. 12-13, 1943, by this victory driving a wedge between the German armies to the N. and S. Manstein, however, forced the Russians to evacuate the town again six days later. Vatutin's recapture of Zhitomir by assault on Dec. 31 was the signal for a mass flight of the German and Rumanian "colonists" whom the Germans had introduced into the Ukraine. *Pron.* Jitomir, sometimes used in English as a translation of the name.

Zhob. River and district of Baluchistan, Pakistan. The Zhob river has a northern course of about 120 m., and joins the Gomul near Khajuri Kach, on the borders of Waziristan. Area, 10,478 sq.m. The pop. of 61,499 consists mostly of Pathans.

Zhukov, GREGORI KONSTANTINOVICH (b. 1895). A Russian soldier. Joining the tsarist army

G. K. Zhukov,
Russian soldier

as a private in 1915, he served on the E. front until the Revolution of 1917, when he was commissioned in the Red army and fought against Poland. In 1922 he entered Frunze military academy, and earned distinction for studies in defensive strategy against mechanised troops. In 1938-39 he served against Japanese forces on the Amur. Named chief of the

general staff and vice-commissar for defence in Feb., 1941, Zhukov was made responsible for Moscow's defence after Marshal Timoshenko was transferred to the S. sector. In Dec. his armies launched a series of attacks which drove the Germans back. He planned and initiated the counter-offensive at Stalingrad, and in Jan., 1943, coordinated forces for raising the siege of Leningrad.

On March 5, 1944, Zhukov took over command of the 1st Ukrainian army, and launched the offensive which carried his troops to the borders of Czecho-Slovakia. Early next year he led the 1st White Russian army in the advance on Berlin. Appointed marshal of the Soviet Union May 1, 1945, he signed for the Russians the ratification in Berlin on May 8 of Germany's surrender. As commander of the Russian occupying forces in Germany, he represented Russia on the Allied control council until recalled to Moscow in April, 1946, to become for a time c.-in.-c. land forces and deputy minister of armed forces.

Ziani. Name of an ancient Venetian family. Sebastiano, elected doge in 1172, played an important part in the peace negotiations between Barbarossa and Pope Alexander III. He also set the finances of the republic in order and instituted the ceremony of the Wedding of Venice with the Adriatic. His son, Pietro, succeeded Dandolo as doge, 1205-29.

Ziegfeld, FLORENZ (1869-1932). American theatrical producer. Born in Chicago, March 21, 1869, he became a showman at its world fair, 1893, and three years later brought to the U.S.A.

Florenz Ziegfeld,
American theatrical
producer

Anna Held, a French music hall singer, whom he married and starred in musical plays. In 1907 he produced the first of the famous Ziegfeld Follies revues in New York, and spent vast sums on "glorifying the American girl" in lavish and spectacular entertainments. One of his most successful productions was Show Boat, at the Ziegfeld Theatre, New York, 1927. He died July 22, 1932. A film, The Great Ziegfeld, appeared in 1937, William Powell playing the lead.

Ziggurat. Temple-tower constructed in diminishing stages, in Babylonia and Assyria. The word

means a high place. The external ascent, usually spiral, was sometimes an upright stairway from terrace to terrace. See Babylon col. plate, f.p. 833; Ur.

Zimbabwe (Karanga, houses of stone). Bantu name for various ancient stone strongholds, especially in S. Rhodesia. Great Zimbabwe denoted three adjacent groups of ruins 17 m. S.E. of Victoria. Explored by Bent in 1891, they were found to comprise an irregular oval, 831 ft. in circuit, enclosed by a wall of unmortared granite blocks, in parts 31 ft. high and 15 ft. thick at the base. An inner parallel wall 190 ft. long forms a narrow passage from one entrance to a confined area containing a solid conical tower 31 ft. high and 57 ft. round the base. Within the ruins were found steatite carvings, especially of hawk-like birds, bowls, phallic emblems, an crucibles, an ingot-mould of an old Phoenician type, and gold objects. Probably the structures were erected under the influence of Arabian gold seekers.

Zimisces (925-976). East Roman emperor, 969-976, otherwise known as John I (Zimisces). He was a native of Cappadocia. Succeeding his uncle, Nicephorus Phocas, whom he murdered, he drove the Russians out of Bulgaria, which, except in the west, became the vassal of Byzantium. Part of Syria was recovered from the Abbasides, and campaigns on the Tigris and Euphrates checked the onset of Islam. *Prov.* Tsimis-keez.

ZINC AND ZINC ORES. The metallic element zinc (chemical symbol Zn) falls into the 4th group of the periodic table of elements, its neighbours being magnesium and cadmium, to which it bears similarity. The atomic no. is 30; atomic weight, 65.38; density, 7.1 gm per c.c.; electrical resistivity 6.1 ohm cm; melting point, 419.5° C.; boiling point, 913° C.; crystal structure, close-packed hexagonal, with a large axial ratio $c/a=1.8563$ and inter-atomic distances of 2.6595 and 2.9070 Å.U. at 25° C.

Zinc occurs in nature chiefly as the sulphide, zinc blende or sphalerite, ZnS , and the carbonate smithsonite (calamine), $ZnCO_3$. Blende is commonly contaminated with other sulphides, such as iron or copper pyrites, and it is often associated with lead sulphide, galena. These mixed ores sometimes contain sufficient silver to render its extraction profitable. Other minerals which occur, usually only in association with

blende or calamine, but occasionally as independent sources of zinc, are the two silicates, hemimorphite, $Zn_2SiO_4 \cdot xH_2O$ and willemite, Zn_2SiO_4 . The famous Broken Hill ore, so called because of its occurrence on a vast scale at Broken Hill, N.S.W., Australia, is an intimate mixture of zinc blende and galena with a variable composition, containing up to 20 oz. silver per ton.

World production of zinc exceeds 1,800,000 tons per year, the largest contributors being the British Commonwealth and the U.S.A., the former producing about 20 p.c., the latter 40 p.c. of the world's total. In the British Commonwealth, the bulk comes from Australia and Canada. Other important producers are Mexico and European countries, among which Germany and Austria yielded 12 p.c. before the Second Great War. The U.S.S.R. produces less than 7 p.c. of the world's total. In the U.K. output from Derbyshire and N. Wales has now almost ended.

There are two principal methods for extracting zinc from its ores, distillation, and electrolysis after leaching. The electrolytic process has gained in popularity, largely because of high purity of the product. The metal from this and from the vertical retort process often exceeds 99.99 p.c. zinc. Considerable amounts of zinc are now recovered by the smelting of zinciferous lead slags, produced during the smelting of the lead concentrates from mixed ores. This is carried out in special furnaces and often electro-thermal methods are used.

PROPERTIES AND USES. Pure zinc (or "spelter" as the metal is termed commercially) is white, with a slightly bluish tinge. It can be readily polished, and a freshly broken surface shows a high metallic lustre. The metal is a poor conductor of heat and of electricity, and it is so soft that it can be easily marked with a knife, but at ordinary temperatures it is not malleable or ductile. At slightly elevated temperatures of about 150° C. it can be easily rolled or drawn into wire, which may have a tensile strength up to 8 tons per sq. in., compared with 2-3 tons per sq. in. for the cast metal. Zinc has a high resistance to corrosion by the atmosphere, and it is this property which largely accounts for its wide use in modern industry. Galvanised sheet and wire are familiar all over the world, accounting for half of the world's zinc, and zinc sheet is being

used increasingly. Zinc plating is replacing cadmium in many plants because of its lower cost.

In the alloy field, zinc is widely applied. Brass, which normally contains between 30 and 40 p.c. zinc, has been cast in the U.K. since 1693. The pressure die-casting industry has been founded on the zinc-base alloys of the "Mazak" type. These alloys contain varying amounts of magnesium, aluminium, zinc, and copper. These are used for mass-produced articles, e.g. door handles, often being electroplated with chromium or nickel. A motor car contains many die-cast parts.

Zinc dust is used in the chemical industries as a reducing agent and in the extraction of gold for the precipitation of metallic gold from cyanide solutions. Zinc oxide is widely used as a pigment by painters because of its pure white colour and protective qualities; and the sulphide, with that of barium, is the pigment lithopone. Certain zinc salts are used in medicine and dentistry, and they also serve as mordants in dyeing processes, as wood preservatives, and disinfectants.

HISTORY. Although the Romans used zinc in brass, it is almost certain that they were not familiar with it as an individual metal. Probably the Chinese separated metallic zinc from its ores many years earlier, but in Europe it was first mentioned as a metal by the alchemist Paracelsus (c. 1492-1541), and at about the same time by Georgius Agricola: but neither describes a method of smelting zinc. At the beginning of the 18th century an Englishman visited China to learn the secret of zinc extraction, and shortly afterwards a plant was started at Bristol for the production by distillation *per descensum*. Further plant was later built at Swansea and Llanelli, which remained the centre of the British zinc industry for many years. In Belgium and Germany the more economical method of zinc distillation *per ascensum* was preferred, and these methods are the basis of many of the modern processes. See Brass; Condensation; Distillation; Electrolysis; Flotation; Roasting; Sintering. For zinc blende, see Sphalerite.

Zincite. Mineral composed of zinc oxide with traces of manganese up to 12 p.c. It occurs as reddish masses or grains associated with franklinite, willemite, and calcite, and is common in the pyrometamorphic zinc deposits at Franklin Furnace, N.J.

Zincography. Process of placing designs for printing purposes on zinc plates, and of producing impressions therefrom. The process is in principle the same as lithography, the zinc taking the place of the stone; it is described under Process Engraving.

Zinc White. Alternative name for the pigment commonly known as Chinese White (*q.v.*).

Zinder. Town in the Niger colony, French West Africa. It was occupied in 1899 and was capital of the colony until 1926, when it was superseded by Niamey. Lying about 130 m. N.E. of Kano in Nigeria, it is a centre of motor roads and of trade, having strong walls pierced with gates. In the vicinity horses, sheep, and camels are bred. Pop. 6,000.

Zinkeisen. Name of two sisters, British designers. Anna Katrina was born at Kilcreggan, Dumbartonshire, Aug. 28, 1901, studied art in London, and early exhibited at the R.A. and Paris Salon. She made her reputation with posters and her semi-stylised compositions had an influence on commercial art. Doris Clare, also Scottish-born, was a successful theatrical designer, her lavish and fantastic style being at its best in productions of *The Insect Play*, 1923; *The Way of the World*, 1924; many Cochran revues; *Nymph Errant*, 1933; *Richard III*, 1944; and the ballets *Giselle*, *The Sleeping Princess*, and *Twelfth Night*.

Zinnia. Small genus of annual and perennial herbs of the family Compositae. Natives of Central America, they have opposite, undivided leaves, and brightly coloured flower-heads. *Z. elegans*, from which most of the garden varieties have been derived, is an annual, with flower-heads ranging in colour from white to scarlet.

Zinoviev, GEORGEI (1883-1936). Name adopted by Radomilsky Apfelbaum, a Russian politician of Jewish parentage. He was born at Elisavetgrad (the name of which was changed to Zinovievsk in 1924) in Sept., 1883, and joined the revolutionary movement as a young man, becoming a leader of the exiled revolutionaries in Berne, where he studied law. Back in Russia, he was active in the revolution of 1905, and had to flee the country again in 1908. He spent

much of the next few years in Switzerland, where he became the chief lieutenant of Lenin, with whom he returned to Russia in 1917 in the sealed rly. coach authorised by the Germans. As president of the St. Petersburg soviet, he enjoyed great power in the new regime, and in 1919 became president of the committee of the third (Communist) international. The so-called Zinoviev letter, published in the press on the eve of the general election in the U.K. in 1924, which represented him as calling on English Socialists and Communists to rebel, was thought to have helped in the defeat of the (minority) Labour govt. at the polls. After Lenin's death in 1924, Zinoviev was at first a supporter of Stalin, but his association with Trotsky led to his expulsion from the Communist party in 1926. He was reinstated in a minor post three years later, but in 1935 was sentenced to 10 years' imprisonment for "moral responsibility" for the murder in Dec., 1934, of Kirov, head of the Leningrad Communist party; and on Aug. 18, 1936, was charged with helping in 1932 to form a terrorist organization aimed at the assassination of Stalin and others. Condemned on Aug. 24, he was shot next day.

Zinzendorf, NICOLAUS LUDWIG, COUNT VON (1700-60). Reorganizer of the Moravian Church. He was born at Dresden, May 26, 1700, and went into the Saxon state church, but soon settled on his estate in Lusatia and gathered a community based on quietist principles. In 1722 he founded for persecuted Moravians a settlement at Herrnhut, for which he was banished by the king of Saxony in 1736. He became bishop of the Moravians in 1737 and then travelled widely in Europe, visiting London and America, preaching and organizing Moravian churches and missions till in 1748 he was allowed to return to Saxony. He died at Herrnhut, May 9, 1760. Zinzendorf wrote mystical works both in prose and verse, and

numbers of his hymns survive. His autobiography, in diary form, was published in 1907. *See* Moravians.

Zion, MOUNT. One of the hills upon which Jerusalem was built. It was immediately S. of Mt. Moriah on which the Temple stood, and was called the City of David. The name Zion is sometimes used in a general sense for Jerusalem.

Zion City. Village of Illinois, U.S.A., in Lake co. It stands on Lake Michigan, 43 m. N. by W. of Chicago, and is served by rly. It was founded in 1901 by John Dowie (*q.v.*), as a market-gardening and dairying colony under the Christian Catholic Apostolic Church. Pop. 3,101.

Zionism. A Jewish movement for the reestablishment of Jewish national life in Palestine. Deriving from the Friends of Zion, founded in Russia c 1870, and the Jewish agricultural colonies established in Palestine from 1882, the movement found expression in 1895 in a book, *Der Judenstadt*, 1895, by Theodor Herzl (Eng. translation *The Jewish State*, 1896). Herzl and Max Nordau convoked the first Zionist congress, 1897, at Basel. This empowered Herzl to negotiate with the Sublime Porte for the grant of an autonomous state under Turkish suzerainty. Two interviews with Sultan Abdul Hamid had no results, and the British govt. was approached.

The Sinai peninsula, considered first, was dropped as too waterless; then on Joseph Chamberlain's initiative, Uganda was suggested. This proposal was rejected thrice at Zionist congresses. Zangwill founded the International Jewish Territorial Organization (ITO) willing to accept the E. African solution. Meanwhile pogroms in Russia were accelerating Jewish immigration into Palestine.

In 1908 a Zionist agency was created at Jaffa, and in 1909 the first Zionist settlement was established at Daganiah on the Jordan, and the first Jewish town, Tel Aviv, was founded. When the First Great War broke out, about 95,000 Jews were living in Palestine; most of them were expelled by the Turks, but ten years later their numbers had grown again. During that war Chaim Weizmann of Manchester won Balfour over to the Zionist aims, which were embodied in the so-called Balfour Declaration (*q.v.*) of Nov. 2, 1917, and confirmed in the mandate for Palestine granted to the U.K. Conflicts between Jews and the Arabs of Palestine, not unnaturally opposed to Zionist aims, caused the British

Zinnia. Brightly coloured flower-heads and leaves

Count Zinzendorf, Moravian leader

in 1921 to limit Jewish immigration.

The subsequent history of Zionism dovetails into that of Palestine (q.v.). With funds collected from Zionists and other Jews everywhere, but particularly in the U.S.A., Zionism assisted the settlement of Jewish immigrants in Palestine and the development of local industry and of culture, e.g. by the creation of the Jewish university of Jerusalem, 1925. The Zionist congress elected an executive body and a president who was simultaneously president of the Jewish agency, which from 1929 embraced non-Zionist Jews also and eventually produced the provisional govt. of the state of Israel, proclaimed May 14, 1948. See Herzl, T.; Nordau, M.; Palestine; Weizmann, C. *Consult* History of Zionism, N. Sokolow, 2 vols., 1919; Zionism, L. Stein, 1932; Why a Jewish State? L. J. Feuer, 1942; The Birth of Israel, J. Garcia-Granados, 1948; Trial and Error, C. Weizmann, 1949.

"Zip." Patent name for a device of which the principle is explained under Slide Fastener.

Zipaquira. Town of Colombia, in the dept. of Cundinamarca, about 30 m. N. of Bogota and connected with that city by the Del Norte rly. Rock salt is mined from deposits hundreds of feet thick, said to be sufficient to supply the world for centuries. Here is a govt. caustic soda plant. Zipaquira lies in a notable cattle-raising district. Pop. 12,200.

Zipporah. Wife of Moses. Daughter of Jethro (Exod. 2), she married the patriarch in Midian, and bore him two sons, Gershom and Eliezer. Later she returned to her father, but rejoined Moses in the wilderness (Exod. 18).

Zircon. In mineralogy, zirconium silicate, $ZrSiO_4$. Occurring as colourless to reddish-brown tetragonal crystals or grains, it is common as an accessory constituent of acid igneous rocks and pegmatites; also in certain metamorphic rocks. The source of the metal zirconium, it is worked from pegmatites in Madagascar, Brazil, and elsewhere; also from placer deposits in Ceylon, Burma, India, and the U.S.A., where it is frequently associated with ilmenite, rutile, and monazite. Zircon has a high refractive index, an adamantine lustre, and is hard; flawless stones of good colour are therefore prized as gems. Gem varieties include hyacinth, red, and transparent; while jargon is colourless and smoky.

Zirconium. One of the chemical elements. Its symbol is Zr; atomic number 40; atomic weight 91.22; density 6.5 gm per c.c.; melting point $1,857^\circ\text{C}$.; boiling point about $2,900^\circ\text{C}$. It has cubic and hexagonal structures. Zirconium is found chiefly as the silicate zircon (v.s.) or the oxide baddeleyite, ZrO_2 . New South Wales produces the largest amount of zircon; most baddeleyite comes from Ceylon and Brazil. Either ore may be obtained in solution by fusion, or baddeleyite may be dissolved in concentrated sulphuric acid under pressure. Owing to the iron and silicates present, many stages are necessary to obtain pure zirconium. Powdered zirconium is inflammable, and will combine with hydrogen, nitrogen, and the halogens. The metal is only slowly attacked by most acids. The common oxide is zirconia, ZrO_2 , a white, highly refractory solid, dissolving in acids to give salts and in fused alkalis to give zirconates.

Zirconium is used for alloying; the addition of 0.7 p.c. to copper doubles the tensile strength, while the addition to magnesium refines the grain and increases resistance to corrosion. Some ferro- and silico-zirconium has been used in steel. The most important commercial compound is the oxide which, melting at $2,700^\circ\text{C}$, is used in ceramics and as refractory linings for furnaces.

Ziska OR **ŽIŽKA**, JOHN (c. 1360–1424). Bohemian soldier. Born at Trocznov, he was brought up as a page in the palace of King Wenceslas, and then served as a soldier of fortune in the German, Hungarian, and English armies. Returning to Bohemia in 1419, he turned the Hussite army into a disciplined host, his followers being called Taborites. He defeated the Germans at Prague, 1420, and though blinded next year, won many more battles, notably in 1422 at Deutsch Brod. Ziska marred his victories by ruthless methods against priests and monks, but he united the Hussite reformers, and was preparing to attack Moravia when he died, Oct. 11, 1424.

Zither. Musial stringed instrument. Popular in the highlands of Bavaria, Styria, and Tirol, it is a shallow box about 20 ins. long, 10 ins. wide, and 3 ins. deep, and having a round opening in the upper sound-board. The shape is not an exact oblong, as frequently one or both of the sides bulge so as to amplify the resonance. The strings fall into three categories:

Zither. Stringed musical instrument of Central Europe

(1) five melody strings of wire tuned like the viola (q.v.), but having the A duplicated; (2) a varying number of accompaniment strings of gut; and (3) twelve bass strings, an octave lower in pitch than the accompaniment strings on the

side farthest from the player. The accompaniment strings provide a complete chromatic scale; they are not, however, arranged in semitonic order, but in fifths and fourths. This principle facilitates the playing of chords.

Zittau. Town of Saxony, E. Germany, on the left bank of the Neisse. One of the earliest German settlements in this formerly Slavonic land, a town since 1255, it contains the churches of Our Lady (13th century), SS. Peter and Paul, a former abbey church (14th century), and S. John (rebuilt 1834–37), and secular buildings of 16th to 17th century origin. It has parks, libraries, and high schools, is a rly. junction, and, in pleasant, hilly surroundings, was an attractive residential town before the Second Great War. Besides a textile industry, there were chemical, metal, and engineering plants based upon the nearby lignite mines. Overrun by the Russians during April, 1945, it lay in the Russian zone of occupation after the surrender of Germany. Pop. 45,000.

Zoar. One of the five cities of the Plain. It was situated near the shores of the Dead Sea. At the destruction of Sodom and Gomorrah, it was spared as a refuge for Lot (Gen. 18).

Zodiac. In astronomy, a belt of the sky 16° wide containing the apparent paths of the sun, moon, and chief planets. The name is derived from the Greek *zodion*, little figure. The zodiac was divided into twelve signs of 30° each. All these signs have their own names and symbols and are as follows, the English equivalents of the Latin names being given in brackets: Aries (Ram) ♈; Taurus (Bull) ♉; Gemini (Twins) ♊; Cancer (Crab) ♋; Leo (Lion) ♌; Virgo (Virgin) ♍; Libra (Balance) ♎; Scorpio (Scorpion) ♏; Sagittarius (Archer) ♐; Capricornus (Goat) ♑;

Aquarius (Water Bearer) ♒; Pisces (Fishes) ♓. The first six of these signs are N. of the celestial equator and the remainder S.

Zodiac. Representation of the signs of the zodiac, from a 16th century MS

The line of intersection of the planes of the ecliptic and the celestial equator meets the celestial sphere at two points known as the equinoctial points, and from these the positions of stars are calculated. The point at which the sun crosses the equinoctial from S. to N. is called the first point of Aries or the vernal equinox, Libra being the corresponding point, the autumnal equinox. The ancients supposed that the equinoctial points were fixed, but they are slowly moving, taking nearly 26,000 years to make a complete circuit of the heavens, and the signs no longer correspond to the constellations, e.g. the sign of Aries is now in Pisces.

The zodiac is Babylonian in origin (c. 2000 B.C.), and was adopted by the Greeks. Other zodiacs were used by the Egyptians and Chinese, who had one of 12 signs at least seven centuries B.C.; the Mexicans had 20 zodiacal signs; and the lunar zodiac of 27 or 28 sections has been extensively used in the East. It was believed till the beginning of the 19th century that all the planets moved within the zodiacal belt, but the discovery of the minor planets showed this to be erroneous. See Aries; Ecliptic; Equinox; Precession; Season.

Zodiacal Light. Term applied to the cone of faint light in the sky, which may be seen stretching along the zodiac from the W. horizon after evening twilight has faded, and from the E. horizon just before the beginning of morn-

ing twilight. In middle latitudes of the N. hemisphere its appearance is most frequent from Jan. to March after sunset, and in autumn before sunrise.

This light is weaker, as a rule, than that of the Milky Way. It accounts for about 30 p.c. of light from the sky at midnight. Its spectrum is identical with that of sunlight.

Zoë (d. 1050). East Roman empress, 1042-50. Daughter of Constantine VIII, she married Romanus III, who came to the throne in 1028, and afterwards Michael IV, the Paphlagonian, whom she had persuaded

put an end to the weakly Romanus in 1034. After Michael's death she raised to the throne in 1041 his nephew, Michael V, who rewarded her by sending her to a cloister on Prinkipo Island. After his dethronement, Zoë and her sister Theodora were declared joint empresses, and Zoë, at the age of 62, took a third husband, Constantine IX, with whom she reigned jointly until her death.

Zoetrope (Gr. *zoë*, life; *tropos*, turning). Mechanical invention, sometimes termed Wheel of Life,

Zoetrope with portion of drum removed to show arrangement of figures

conveying an impression of figures in actual motion. It consists of a rotating drum or cylinder perforated with slits. On the inside surface of the drum are represented figures in different progressive actions of running, jumping, etc. The drum being made to revolve, a visual impression of continuous motion is imparted to the various

objects when viewed through the holes. *From. zoëv-trope.*

Zoffany, JOHN (1733-1810). An Anglo-German painter. Johann Zauffely went from Ratishbon (Regensburg) to study painting in Italy. After an unhappy marriage he came in 1758 to England, and after a hard struggle became celebrated as a

J. Zoffany, Anglo-German painter

portraitist, especially of actors, among whom he painted Garrick and Foote. Admitted in 1769 to the newly established Royal Academy, he executed portraits of many of the members; The Life School at the R.A. is at Windsor Castle. A favourite artist of George III, for whom he painted pictures of the royal family, Zoffany travelled in India during 1783-90, and died at Strand-on-the-Green, Chiswick, Nov. 11, 1810. He is well represented in the National and National Portrait galleries, London.

Zog (b. 1895). Former king of Albania. Head of Zogolli, one of the four ruling families of the Mati district of Albania, Ahmed Zogu was born Oct. 8, 1895. He served in the Austrian army in the First Great War, and in 1920 became Albanian minister of the interior, and of war in 1921. Becoming premier in 1922, he was a bitter opponent of Yugoslav incursions into his country, and, governing with ability, pursued a strongly anti-irredentist and constructive policy. In June, 1924, a serious revolt caused him to resign and flee to Yugoslavia, but in Dec. he returned to Albania and, ousting the premier, Fan Noli, formed a new govt. On Feb. 1, 1925, he was elected president of the Albanian republic.

Zog, former king of Albania

On Sept. 1, 1928, he was proclaimed king of Albania, becoming the only Muslim monarch in Europe, and on April 27, 1938, married at Tirana the Hungarian countess Geraldine Appenyi. The mixed marriage resulted in a strong protest from the Vatican. Zog's conciliatory policy to Italy, which earned him much internal opposition, did not prevent the Italian

govt. from invading and annexing his country on Good Friday, April 7, 1939. Zog was forced into exile in Egypt and was officially deposed in 1946. See Albania.

Zoisite. One of the epidote group of minerals, composed of a complex basic silicate of calcium and aluminium. Zoisite is a rock-forming mineral often found in metamorphosed igneous rocks rich in lime; also in metamorphosed impure limestones and saussurite.

Zola, ÉMILE ÉDOUARD CHARLES ANTOINE (1840-1902). French novelist. Born in Paris, April 2,

Émile Zola

1840, of Italian, Greek, and French ancestry, he was educated at Aix and at the Lycée St. Louis, Paris, and Marseilles university, but failed to take a degree and sank into poverty. In 1861 he

started literary work with journalism, and next year became a clerk to Hachette. In 1864 appeared his *Contes à Ninon*, followed by the novel *Thérèse Raquin*, 1867. Zola now left business and devoted himself to the realistic novel. His main contribution to a current which profoundly influenced French 19th century fiction was the Rougon-Macquart series of twenty novels, beginning in 1870-71 with *La Fortune des Rougon*, and ending with *Le Docteur Pascal*, 1893.

Among the chief books of the cycle, which traces with scientific methods of social and psychological research the fortunes of a certain family, and exposes the differing effects of heredity and environment, are: *La Faute de l'Abbé Mouret*, a study of provincial life, 1875; *L'Assommoir*, dealing with the drink problem, 1877; *Nana*, the most notorious, 1880; *Pot-Bouille*, 1882; *Germinal*, descriptive of mining, 1885; *La Terre*, of peasant life, 1888; *La Débâcle*, of the Franco-Prussian War, 1892. In the trilogy of *Lourdes*, 1894; *Rome*, 1896; *Paris*, 1898, Zola traced the movement of a priest from Catholicism to free thought.

Inevitably Zola, with his courageous search for truth, his demand for detail and movement in his stories, put in a great deal that was violent and unpleasant; he dwelt upon brutality and debauchery, the grotesque and the horrible.

He probably enjoyed denunciation and exposure, for his characters were meant to typify the French men and women of his time. The body of his fiction has been compared in scope to Balzac's *Comédie Humaine*, and in form to Galsworthy's *Forsyte Saga*, but more than either it appears to be the product of mental energy that was almost demoniac. He must rank with the creative geniuses of fiction.

Zola's great popularity was in part affected by his violent intervention in politics as a champion of Dreyfus. In 1898 he launched an attack on what he believed to be a conspiracy by government and military, publishing the open letter beginning *J'accuse*, in *L'Aurore*. (See Dreyfus Case.) Riots broke out. Zola was both mobbed and chaired, and was sentenced to imprisonment and fine, but spent some months in exile in England, returning to France in 1899 on the revision of the Dreyfus trial. He was accidentally poisoned by gas fumes in his bedroom in Paris on the night of Sept. 28-29, 1902. There was an amazing demonstration at his funeral. In 1908 his body was placed in the Panthéon.

Bibliography. Most of the novels exist in Eng. trans., notably by E. A. Vizetelly. So does *Le Procès Zola*, an account of the trial in 1898. Consult also E. Z., *Novelist and Reformer*, Vizetelly, 1904; Z. and His Time, M. Josephson, 1928; Zola, H. Barbusse, Eng. trans., 1932. In a film, *The Life of E. Z.*, 1938, Paul Muni took the part.

Zollverein (Ger. *Zoll*, customs; *verein*, union). Term used historically for a union of German states adopting a common tariff against goods imported from outside and practising free trade among the members. The first Zollverein was formed in 1819. In 1828 Bavaria and Württemberg formed a union, and in 1833 these N. and S. unions were amalgamated. The German Zollverein gradually embraced all the states of the N. German Confederation.

Zomba. Capital of Nyasaland Protectorate. It is situated on the slopes of Mount Zomba at an alt. of 3,000 ft., 40 m. N.E. of Blantyre, and is connected by road with Lilwonde, on the Shire river, and Fort Johnston.

Zone (Gr., girdle). Large region, represented ideally as surrounding the earth, over which climate is roughly uniform. Since the temperature of a place chiefly depends upon the amount of radiation received from the sun,

the first attempt at division of the earth's surface into climatic zones was determined by astronomical considerations. On this basis there are a torrid zone straddling the equator and limited by the tropics of Cancer and Capricorn (lat. $23\frac{1}{2}^{\circ}$ N. and S.); two temperate zones extending from the tropics to the polar circles (lat. $66\frac{1}{2}^{\circ}$); and two polar zones beyond.

Current practice is to define the limits of the temperate zones by the temps. of the coldest and warmest months, e.g. in the N. hemisphere the Jan. 64° F. isotherm and the July 50° F. isotherm have been proposed by Köppen as the respective equatorial and polar boundaries. The former may be said to represent the S. limit of comfortable mean temps.; the latter coincides with the N. limit of regions in which trees are found. Similar boundary lines apply in the S. hemisphere. It has also been necessary to supplement the five original zones by three more, i.e. N. and S. dry belts at the boundaries of the torrid zone, and the boreal tree belt between the N. temperate and N. polar zones. These do not completely surround the earth.

Zone time is the name given to the system, now almost universal, under which national standards of time differ from one another by multiples of half an hour or one hour, i.e. corresponding with $7\frac{1}{2}^{\circ}$ or 15° of longitude. Hence, in e.g. the U.S.A. and Canada, several zone times are in force. See Climate.

Zone. In geology, a group of strata marked by the occurrence of a distinctive fossil or group of fossils. To be of value as a zonal index the particular fossil should have had a restricted existence in geological time, a wide distribution, and easily recognizable features, have been capable of existing under different conditions, and be of common occurrence. Zones are thus subdivisions of larger geological periods, e.g. the Cretaceous System is divided into five groups, Wealden, Lower Greensand, etc., but each of these is further split into zones. The Chalk, for example, can be subdivided into some eleven zones, all represented by characteristic fossils. See Fossil; Geology.

Zooïd. Term used for an organism which does not proceed from an egg, but is produced by budding or fission from a preceding individual. The term is also used for an individual member of a compound or colonial animal. See Biology.

Zoological Gardens. Area set apart for the exhibition and study of living animals. The Jardin des Plantes, Paris, the zoological garden, Berlin, the national zoological park at Washington, and the zoological gardens at Dublin are some of the largest. Those of the Zoological Society of London in Regent's Park, founded 1828, cover 34 acres, and include mammals, birds, and reptiles from all parts of the world. There are an aquarium and an insect house. By the building of the Mappin Terraces a greater amount of freedom was given to many animals. In 1927 the trustees bought about 500 acres at Whipsnade (*q.v.*) as a zoological park, opened in 1931. See Regent's Park.

Zoological Society. Association of persons for the promotion of zoological research. Such societies exist in all civilized nations. At the head of them stands the Zoological Society of London, founded in 1826 and granted a royal charter three years later.

Zoology (Gr. *zōon*, living creature; *logos*, discourse). That branch of the science of biology concerned with the structure, life, habits, and classification of animals, as distinguished from botany, which deals with plants. See Animal; Biology; Mammal.

Zorndorf. Village in that part of Germany placed under Polish administration by the Potsdam agreement. It is 5 m. N. of Küstrin and is famous as the scene of a battle fought Aug. 25, 1758, between the Prussians and the Russians during the Seven Years War. This was stubbornly contested throughout the day by about 40,000 men on either side, and ended in a Russian retreat. Both combatants lost very heavily, and the encounter ranks as one of the bloodiest of the century. See Seven Years War.

Zoroaster or **ZARATHUSTRA** (Pers. Zardusht). Founder or prophet of the old Persian religion. He figures as an historical person in the oldest portion of the Zend-Avesta. He is believed to have been born in N.W. Persia, not later than

660 B.C., perhaps much earlier. Legend asserts that he was of noble family, received the ancient Parsee scriptures from a divine source, and was murdered in Bactria when the Turanians took Balkh. Consult Z., Prophet of Ancient Iran, A. V. W. Jackson, 1899. Pron. Zoro-aster.

Zoroastrianism. Religion of ancient Persia. Named after its founder or prophet, Zoroaster, it aimed at a reformation in the life of the people. It was adapted to the needs of a pastoral community, was monotheistic, and inculcated hospitality, philanthropy, and benevolence as against Turanian brigandage, and the polytheism, idolatry, and licentiousness of the primitive Aryans. It was persuasive, or passive, rather than propagandist, and its central idea was of a world contest between the forces of good and evil, or between light and darkness, personified as Ormuzd and Ahriman, in which struggle it was man's duty to help the good. Flourishing between the 6th and 4th centuries B.C., Zoroastrianism was made the state religion under the Sassanids, A.D. 227-651, and suffered partial extinction by Mahomedanism. Great reverence was paid to the elements. Moore's poem, *Lalla Rookh*, popularised the name fire-worshippers, by which the adherents of Zoroastrianism are sometimes designated. See Parsees; Zend-Avesta.

Bibliography. Essays on the Sacred Language, Writings, and Religion of the Parsees, M. Haug, 1862; Trans. of Herodotus, 1858-60, and Five Great Monarchies of the Ancient Eastern World, G. Rawlinson, 1862-67; Chips from a German Workshop, F. M. Max Müller, 1868-75; Zoroastrian Problems in the 9th Century Books, H. W. Bailey, 1943.

Zorrilla, José (1817-93). Spanish poet and dramatist. Born Feb. 21, 1817, at Valladolid, the son of a lawyer, he studied at Madrid and took up the law, but eventually abandoned it for literature. He died in poverty Jan. 23, 1893.

José Zorrilla,
Spanish poet

Yet his name was familiar to all speakers of the Spanish language, by whom he is regarded as one of the foremost poets. His verse is rich in phrasing and full of emotion. Zorrilla is especially famous for his dramatic work *Don Juan Tenorio*, 1844, still per-

formed throughout the Spanish-speaking world of Europe and America. The *Dagger of the Goth*, and *The Shoemaker and the King*, are well known.

Zorrilla de San Martín, JUAN (1857-1931). Uruguayan poet and diplomatist. Born in Montevideo,

Zorrilla de San
Martín,
Uruguayan poet

and educated at the Jesuit College of Santa Fé, Argentina, he devoted himself to government service, being for a time Uruguayan minister in London. The publica-

tion in 1888 of his epic *Tabaré*, based upon an Indian legend of Uruguay, and with strong resemblance in theme and manner to *Hiawatha*, established him securely as the most eminent poet of his country. *Tabaré* has been translated into French and made the theme of an opera successfully produced in Spain. It is widely read throughout Spanish America. Zorrilla died Nov. 3, 1931.

Zouave. Name given to a certain class of African infantry in the service of France, originally recruited from the Zwawa, a tribe of Berbers, in 1831.

Up to the Second Great War there were four regiments of Zouaves, each of five battalions, but they consisted exclusively of Frenchmen, and were regarded as *corps d'élite*. The uniform is a picturesque adaptation of Moorish dress, the short blue Zouave jacket and baggy red trousers being particularly distinctive. Zouaves fought under Leclerc in N. Africa, and one regt. retook Belfort, Nov. 20, 1944.

Zouave in Moorish
uniform

Zoutpansberg. Range of mts. in the N.E. of the Transvaal, S. Africa. With an alt. of 3,000 to 4,000 ft., they form a N. extension of the Drakensberg, and give their name to an extensive dist. now crossed by the rlys. from Pretoria to S. Rhodesia. The dist. is rich in minerals and game.

Zsigmondy, RICHARD (1865-1929). Austrian chemist, born in Vienna, April 1, 1865. Lecturer at

Zoroaster,
Persian prophet
From a rock sculpture

Graz university from 1893, he was in 1897 appointed scientific member of the Schott glass combine at Jena. With Siedentopf he invented the ultra-microscope, 1903. He was made professor of colloid chemistry at Göttingen, 1908, subsequently inventing the star dialyser and the ultra-membrane filter. Chiefly for devising methods of making colloidal solutions, especially in connexion with purple of Cassius, and for measuring ultra-microscopic quantities, he was awarded the Nobel prize for chemistry in 1925. He died Sept. 23, 1929.

Zuccherò or **ZUCCARO**, FEDERICO (1543-1609). Italian painter. Born at St. Angelo in Vado, he studied under his brother Taddeo (1529-66). After cooperating with the latter in the decoration of the Vatican, Belvedere, and other buildings, he visited France and the Netherlands, and, in 1574, England, where he painted portraits of Elizabeth and Mary Queen of Scots. He established the academy of S. Luke in Rome, and died at Ancona. See Bacon, Sir N.; Elizabeth illus. p. 3028; Norris, Sir J.

Zug. Lake of Switzerland. Formed by the river Aa, and situated mostly in canton Zug and partly in Schwyz, it is 9 m. in length and 2½ m. in breadth.

Zug. Small canton of north-central Switzerland. It is situated S. of Zürich, E. of Lucerne and Aargau, and W. of Schwyz. Mountainous in the S. and S.E., its chief heights are the Kaiserstock (8,530 ft.) and the Rossberg (5,190 ft.). To the N.W. it is rich in cornfields and orchards. The canton contains the Lake of Aegeri and the bulk of that of Zug. The chief streams are the Reuss, Sihl, and Lorze. Cattle breeding, cotton spinning, agriculture, and the manufacture of condensed milk are the principal occupations. The capital, which stands at the N.E. corner of the lake 18 m. by rly. S. of Zürich, has the same name as the canton, and a pop. of 12,372. Zug joined the Swiss confederation in 1352. Area, 93 sq. m. Pop. 36,643.

Zugspitze. Highest mt. of Germany, 9,720 ft. alt. In S. Bavaria, near the Austrian border, it is 54 m. S.S.W. of Munich.

Zuider Zee or **ZUYDER ZEE** (Dutch, south sea). Former inland sea of the Netherlands, opening from the North Sea. The is. of Texel, Vlieland, Terschelling, and Ameland lay across the N. opening. Its greatest length, S.S.W. to N.N.E., was about 83 m., its greatest width about 34 m. Its average

depth was 12-13 ft. The chief islands were Wieringen, Marken, Urk, and Schokland. The North Sea Canal (Noordzee Kanal) joined it with the North Sea at Ymuiden. Ports included Amsterdam, Nieuwediep, Kampen, Harderwijk, and Harlingen, and fishing was of importance.

The Zuider Zee in early historical times was forest land, the enclosing islands being part of the mainland. During the 12-14th centuries enormous encroachments were made by the sea. Recovery of the land began in the 17th century in the prov. of N. Holland. The Zuider Zee ceased to exist with the completion of the great dyke from the N. Holland coast to Wieringen, and thence to Friesland, a total length of nearly 20 m., in 1933. See Netherlands: Land Reclamation; Yssel Meer.

Zulia. North-western state of Venezuela, bordered on the W. by Colombia. On its other sides it touches the states of Falcón, Lara, Trujillo, and Táchira; and it almost surrounds Lake Maracaibo (q.v.). The surface is mostly low-lying and well watered, the chief rivers being the Zulia and the Catatumbo; it also contains many lakes. Much is covered by forests of potentially valuable timber. The capital is Maracaibo. Area, 25,283 sq. m. Pop. 345,667.

Zuloaga, IGNACIO (1870-1945). Spanish painter. Son of a ceramic manufacturer, Zuloaga y Zabaleta

Ignacio Zuloaga, Spanish painter. Self-portrait, reproduced by courtesy of the Hispanic Society of America

was born at Eibar, near Bilbao, July 26, 1870, and learnt the art of damascening metal for armour and arms in his father's factory. He studied painting in Rome and Paris, and after a visit to England returned to Spain, and was during 1892-99 an art critic. Settling near Segovia, he painted studies of bull-fighters, dwarfs, dancers, brigands, and portraits of society women; his art was essentially Spanish, with occasional satire derived from Goya. Little Doña Mercedes is in the Luxembourg; Family of My Uncle Daniel is at Boston, Mass. Zuloaga died in Madrid, Oct. 31, 1945.

Zulu or **AMAZULU**. Negroid people of Bantu speech, mostly N. of the Tugela river in S. Africa. Essentially one in race, language, and culture with the Xosa Kaffirs,

they became distinguished from them by the autocratic military organization introduced, after a visit to Cape Town, by Dingiswayo, and developed by his successor Chaka (1783-1828), seventh in descent from a legendary chief Zulu. They include the Swazi and Tonga tribes, as well as those bands whose reflex migrations beyond the Limpopo, begun in Chaka's day, resulted in the formation of the Matabele and Angoni confederations, and exerted political influence up to the Victoria Nyanza about 1859. They are famous for physique and fighting qualities. See Africa, and colour plate; Cetywayo; Kaffir.

Zululand. Maritime country in S. Africa. Lying in the N. of Natal, it was annexed by that prov. in 1897 and is now a division. It extends from the Tugela River on the S. to Swaziland and the Portuguese territory of Mozambique on the N. It has an area of 10,427 sq. m. and a seaboard of 210 m. The country is flat in the coastal regions but gradually rises to 5,000 ft. in the interior. It is well watered, the chief rivers being the Pongola, Umkusi, Ungavuma, Umfolozi, and Maputa; in connexion with the last is a large irrigation scheme.

The climate is comparatively healthy, though malaria is prevalent. Heat would be oppressive were it not for frequent violent thunderstorms. The tsetse fly, which once infested Zululand, was overcome by an ingenious trap made in the form of an animal, at which the flies seek their food by sight. Gold occurs, though production is low; also silver, copper, lead, tin, asbestos, and coal. Pop. approx. 260,000.

Under their chief Chaka, the Zulus early in the 19th century were welded into an invincible army and their country became a powerful kingdom. Chaka was slain by his half-brother Dingaan, who has achieved fame in African history because of the total defeat of his army of 12,000 by a few hundred Boers on Dec. 16, 1838. Dingaan was deposed next year. In 1873 Cetywayo became king, but in 1879 came into conflict with British forces under Chelmsford. Several engagements took place, notably at Isandhlwana, Jan. 22, Rorke's Drift on the same day, Ginginhlovu on April 2, and Ulundi on July 4. At the last battle the power of the Zulus was completely broken. Zululand was declared British territory in 1887 and annexed to Natal ten years

later. In 1906 a serious native rebellion in Natal spread to Zululand, but was suppressed by the colonial forces. *See* Isandhlwana; Natal; South Africa; Ulundi.

Bibliography. Cetewayo and his White Neighbours, Sir H. R. Haggard, 1896; *Story of the Zulus*, J. Y. Gibson, 1911; *History of the Zulu Rebellion*, 1906, J. Stuart, 1913; *Zulu Battle Piece*, Sir R. Coupland, 1948.

Zungaria. Tract of mountainous country in the N. of Sinkiang, China. Adjoining Kazakh S.S.R. on the W. and Mongolia on the E., it marks the extent of the empire of the Zungars in the 18th century. *See* Sinkiang.

Zunz, LEOPOLD (1794-1886). German Jewish scholar, born at Detmold, Aug. 10, 1794. From the age of 21 he devoted himself to the study of ancient Hebrew manuscripts. In 1819 he founded a league for the study of Jewish culture, of which many leading German Jews became members. Sometimes called the founder of the science of Judaism, he was a popular preacher and writer, his historical books being of unequalled value as statements of fact and as sources concerning the Jewish people. In 1840 he became first director of the Lehrerseminar in Berlin. He died March 8, 1886.

Zurbaran, FRANCISCO DE (1598-c. 1664). Spanish painter. Born Nov. 7, 1598, at Fuente

F. de Zurbaran,
Spanish painter

de Cantos, he studied under Juan de las Roelas at Seville. His art, naturalistic and a little sombre, is distinguished by a note of sincere piety. His best works include the decoration of the high altar in the Jesuit collegiate church of S. Thomas Aquinas, Seville; a series of paintings for the Carthusians of Santa Maria de la Cuevas, now in the Seville gallery; and an Adoration of the Shepherds, now in the National Gallery, London. He was town painter of Seville, 1629, and court painter, 1638. In 1650 he visited Madrid, where he was employed on the decoration of the Buen Retiro, and where he died. Known as the Spanish Caravaggio, he was a friend of Velazquez.

Zürich. Lake of Switzerland. The major portion is in the canton of Zürich. Length is 25 m., greatest breadth $2\frac{1}{2}$ m., area 34 sq. m., and maximum depth 470 ft. The Linth enters the S.E. end and

Zürich, Switzerland. General view showing the Grossmünster (left) and the lake and Alps beyond

the Limmat carries the drainage of the lake to the Aar.

Zürich. Canton of Switzerland. It abuts on the Rhine and on Germany in the N., where it comprises undulating lowland; in the S. numerous mountain ridges separate narrow steep-sided valleys, in one of which is the lake of Zürich; the Limmat, Töss, Thur, and other rivers flow in general N.W. The soil is carefully tilled, and there are extensive vineyards. Textile industries and the manufacture of machinery, paper, leather, and embroideries give employment to the people, who are mainly German-speaking Protestants. The canton joined the confederation in 1351. Its area is 668 sq. m. Pop. 772,617.

Zürich. The largest city and former capital of Switzerland. The capital of the canton of Zürich, it stands at the N. end of the lake of Zürich, 41 m. by rly. and 25 m. direct N.N.E. of Lucerne. The Limmat separates the Grosse from the Kleine Stadt; it is crossed by the fine Münster bridge. Near by is the Grossmünster, a Romanesque church with Gothic features, built 1090-1150, 1225-1300, of which Zwingli, who began his reformation here in 1518, was pastor. Other fine churches are the Frau Münster, erected in the 13th and 14th centuries, the modern church of Our Lady, and S. Peter's with the tomb of Lavater, once the pastor. Their bells leave an unforgettable impression.

The Swiss national museum, a large building opened in 1898, occupies the tongue of land between the Limmat and its affluent, the Sihl. The university, refounded in 1833 from a 16th century original, has faculties of theology, law, medicine, veterinary medicine, and philosophy. Near it is the federal institute of polytechnics, built 1860-64, belonging to which are archaeological, geological, and other collections. The

German Renaissance town hall dates from 1694. The foremost commercial and industrial city in the republic, Zürich is chiefly interested in silk manufactures; cottons, paper, chemicals, and machinery are also produced. This is the centre of Swiss banking and commerce, and a headquarters of international trade. Pop. 336,395.

Zutphen. Town of the Netherlands, in the prov. of Gelderland. It lies on the Yssel, 19 m. by rly. N.E. of Arnhem, and is an important rly. centre. There is trade in timber and dairy and agricultural produce, and paper, tobacco, soap, and textile industries. The Gothic church of S. Walpurgis is a 12th century foundation with 17th century tower, and a fine library with chained books. The town hall, the 17th century Wynhuis tower, and remains of the town walls are notable. The battle of Zutphen, between the English and the Spaniards, was fought at Warnsveld near the town, Sept. 22, 1586, when Sir Philip Sidney, in command of the English forces, was mortally wounded. In German hands from May, 1940, Zutphen was captured April 7, 1945, by Canadian infantry after fierce fighting. Pop. 21,505.

Zweibrücken (Fr. Deux Ponts, two bridges). Town of Rhineland-Palatinate, W. Germany, 30 m. E. of Saarbrücken. The cap. and residence of the duchy of Palatinate-Zweibrücken 1410-1815 (though for the last 20 of those years in French possession), it had a fine Baroque palace (1720-30), a huge Gothic church with five naves (1493-1510, reconstructed 1904-11), town hall (1779-85), a theatre, museum, libraries, public schools, park, and racecourse. From 1815 the town belonged to Bavaria. There were engineering, textile, footwear, and cigar works, and the ducal printing plant was famous in the 18th century for its *Editiones Bipontinae*. Captured by the U.S. 7th army March 20,

1945, the town came in the French zone after Germany's surrender. Pop. 20,770. See Saar Basin.

Zweig, ARNOLD (b. 1887). German writer. Son of a saddler, he was born at Gross-Glogau, Prussia, Nov. 10, 1887, and studied philosophy at a number of German universities. Service in the First Great War deeply coloured his outlook as a writer and

Arnold Zweig,
German writer

provided the themes of many novels. After living in Bavaria until 1923, he settled in Berlin, but in 1933 was expelled from Germany by the Nazis, making his home at Haifa, Palestine. A writer of great power, he gained international reputation with *The Case of Sergeant Grischa*, 1927. Other novels included *Education Before Verdun*, 1935; *Crowning of a King*, 1937. He published a play, *The Axe of Wandsbek*, 1947.

Zweig, STEFAN (1881-1942). Austrian-born British writer. Born of Jewish stock in Vienna, Nov. 28, 1881, he was educated there. After publishing verse and becoming well-known as a translator of Baudelaire, Verlaine, and Verhaeren, he gained the friendship of Freud, and wrote biographical

Stefan Zweig,
Austrian-born
British writer

studies in which sexual psychology was emphasised: *Fouché*, 1929; *Marie Antoinette*, 1931; *The Queen of Scots*, 1935. His German version of *Volpone* was a notable success, and he achieved international reputation with pathological studies of Tolstoy, Nietzsche, Hölderlin, and Kleist. Zweig's works were banned by the Nazis, and he escaped from Austria after they invaded that country, coming to England and becoming a British subject. He committed suicide with his wife at Petropolis, Brazil, about Feb. 23, 1942. A biography of Balzac on which he had worked for 20 years was unpublished. *Consult Life*, by his wife, new ed., 1947.

Zwickau. Town and district cap. of Saxony, E. Germany. One of the oldest and most important

towns of E. Germany, it was until the Second Great War an industrial centre, based upon a large coalfield. Its district, with 870 persons to the sq. m., was one of the most densely populated in the country. Situated on the Mulde, 40 m. S. of Leipzig, at an alt. of 880 ft., it was a rly. junction and had an airport. Though concerned with coal, gas, electricity, engineering, chemicals, and ceramics, the city was romantic in its centre, where stood the Gothic S. Mary's church (1118, reconstructed 1505-37) with a tower 237 ft. high and remarkable paintings by Lucas Cranach; also S. Catherine's (1212-19), where Münzer preached in 1520-21; the cloth hall (1522-36), later a theatre; and Osterstein castle (1565-85). Schumann was born here. Originally a Sorbian settlement and known since 1118, it was a town from 1212 and came to the Wettin dynasty in 1307. Zwickau as a centre of the Anabaptist movement was saved from disaster by Luther's personal intervention. It became rich by the mining of silver in the neighbourhood, and won fame for its public school and civic library in the 16th century. Captured by the U.S. 3rd army, April 18, 1945, it came within the Russian zone after the surrender of Germany. Pop. 128,000.

Zwingli, ULRICH (1484-1531). Swiss religious reformer. Born to a peasant couple at Wildhaus, St. Gall, Jan. 1, 1484, and educated at Berne, Vienna, and Basel, he became a teacher of the classics, a parish priest in 1506, and for a time acted as an army chaplain, during which period he seems to have acquired doubts about doctrine. Basing his teaching on the Gospel and the Fathers, Zwingli publicly denounced the authority of the pope in matters of politics, and later of faith, and opposed the sale of indulgences. In 1518 he became pastor at Zürich, and under a Protestant government was able to teach reformed doctrines freely.

His sermons caused a cleavage in Zürich, but in 1523 the council adopted his views. He broke with Luther over the doctrine of the Eucharist, teaching that it is nothing more than a symbolic meal. From 1527 he engaged with the

troops in the war between Zürich and the R.C. cantons, and was killed in battle at Cappel, Oct. 11, 1531. Unlike Luther, Zwingli called for a complete breach with medieval practice and hoped to see church government identical with civil. As a believer in predestination he anticipated Calvin. His doctrine was set out in the Helvetic Confession of 1536. A biography by S. Simpson appeared in 1902. See Reformation.

Zwolle. Town of the Netherlands, in the prov. of Overijssel. It lies on the Zwartewater, 19 m. by rly. N. of Deventer, and is an important rly. junction. There is busy trade in local dairy and agricultural produce. Industries include brewing, distilling, tanning, soap, tobacco, and butter making. The large church of S. Michael was begun in 1406, and the R.C. church of Our Lady is a 15th century building with a tower 300 ft. high. The town hall was originally built in 1447. In German occupation from May, 1940, Zwolle was liberated by Canadian infantry, April 14, 1945. Part of the "temporary" Waterloo bridge from London was incorporated in a temporary bridge over the Zwartewater to take the place of one destroyed by the Germans. Pop. 46,845.

Zygote. Biological term applied generally to the product of fusion of two gametes. From it the new sexually produced individual develops. In botany the kind of zygote formed by the fusion of two structurally similar gametes is termed a zygospore, to distinguish it from the kind called an oospore which results from the fertilisation of an egg cell by a structurally different and usually smaller male gamete.

Zymotic Disease. Term embracing those communicable or infectious diseases which occur in epidemic form.

Zyrians. Name given to a Finnish tribe inhabiting part of the territory between Perm and Archangel, N. Russia, and occurring in smaller numbers along the lower Ob, Siberia. They are akin to the Permian tribes. See Komi-Zyrian.

Zywiec. Town of Poland, 40 m. S.W. of Cracow, near the Czechoslovak border. At an alt. of 1,150 ft. on the Beskid slopes, it has wood, chemical, and liquor industries, and a famous Hapsburg castle with park. Pop. 6,398. Zywiec gives its name to a district. In German-occupied Poland from Sept., 1939, it was liberated by the Russians during Jan., 1945.

Ulrich Zwingli,
Swiss reformer
After Holbein the
younger

THE NEW UNIVERSAL ENCYCLOPEDIA is a work of such great length that it must necessarily be printed in sections over a fairly long period of time; and events in the twentieth century move so rapidly that changes have inevitably occurred during the time between the sending to press of the first and the last sections of the work. In this final section of "newest words" is given the latest

information available on all subjects treated in the main text at the time of printing these last pages. Reference forward to this section will be found in a number of articles in the main text; but many items find a place here to which there is no reference from the main text. Biographies of personalities who came into the public eye only after the Second Great War are among the new subjects.

Death of H.M. King George VI and Accession of H.M. Queen Elizabeth II

TO British people everywhere the most outstanding event to occur since this edition went to press has been the change in the occupancy of the British throne. **George VI** died suddenly of coronary thrombosis, at Sandringham House, in the early hours of Feb. 6, 1952. His body was brought to London, where it lay in state in Westminster Hall for three days before burial in St. George's Chapel, Windsor, Feb. 15. He was succeeded by his elder daughter, the Princess Elizabeth Alexandra Mary, duchess of Edinburgh, who became queen-regnant by the name and style of **Elizabeth II**. The words of the proclamation, as read in the U.K., described her as "Queen of this Realm, and of her other Realms and Territories, Head of the Commonwealth." At the time of her accession she and her husband the duke of Edinburgh were in Kenya, on the first stage of an official tour which was to have included Australia, New Zealand, and Ceylon. The tour was at once postponed, and the queen flew back to London. Prince **Charles Philip Arthur George** (*q.v.*) became the heir-apparent to the throne, also duke of Cornwall, duke of Rothesay, earl of Carrick, baron of Renfrew, lord of the isles, and prince and grand steward of Scotland. Princess **Anne** (*q.v.* in this N.V. section) became second in the line of succession, and Princess **Margaret** (*q.v.*) third.

Those who use this Encyclopedia will doubtless be prepared to make for themselves the mental adjustments consequent upon these facts, wherever necessary in various contexts throughout the work—not only in the articles on the various personages mentioned, but under such headings as **ROYAL FAMILY**, **UNITED KINGDOM**, etc. They will also appreciate that the succession of a king by a queen has affected such nomenclature, well established over a period of 50 years, as **KING'S BENCH DIVISION**, **KING'S COUNSEL**, **KING'S EVIDENCE**, **KING'S MESSENGERS**, **KING'S PROCTOR**, **KING'S REGULATIONS**, and **KING'S SPEECH**, all of which have separate headings in this Encyclopedia under these titles, as well as innumerable other, more general, references which now call for a change in gender, if only in the use of the personal pronoun.

Abdullah Ibn Hussein. King of Jordan. In April, 1950, in spite of protests by the Arab League he proclaimed the union of Arab Palestine with Transjordan, to form the kingdom of Jordan. His Memoirs were published in English in 1950. He was shot dead in Jerusalem, July 20, 1951, by a 21-year-old assassin, and was succeeded by his son, Talal.

Aberdare. Under the 1948 redistribution of parl. seats Aberdare gives its name to a bor. constituency.

Aberdeenshire. Under the 1948 redistribution of parl. seats Aberdeenshire had 2 co. and 2 burgh constituencies, Kincardineshire being joined to Angus.

Acheson, **DEAN GOODERHAM** (b. 1893). American politician. Born April 11, 1893, at Middletown, Conn., he was educated at Yale and the Harvard law school. His appointment in 1919 as private secretary to an associate justice of the supreme court was followed in 1921 by a partnership in one of the leading legal firms in Washington. Acting secretary of the treasury for a short time in 1933, he was appointed assistant secretary of state, 1941, U.S. member on the council of U.N.R.R.A., 1943, and under-secretary of state, 1945-47. In this last capacity he was a firm upholder of the "Truman doctrine" by

which the U.S. offered protection to Greece and Turkey, and it was he who first made tentative proposals in a speech at Cleveland, Miss., for economic aid to Europe on lines developed in the European Recovery Programme (*q.v.* in N.V.).

Truman appointed him in succession to George C. Marshall as sec. of state, Jan. 21, 1949. Before the senate committee examining his fitness for that post he admitted his friendship with Alger Hiss (*see* Hiss Case, in N.V.), although maintaining unqualified opposition to Communism. In his first year of office he completed the negotiation of the North Atlantic Treaty (*q.v.* in N.V.) and obtained congressional assent to the most ambitious peacetime arms programme ever presented in the U.S.A. He backed U.N. action in Korea (*q.v.* in N.V.).

Achilles. In 1948 this British light cruiser was transferred to the Indian Navy and renamed Delhi.

Adenauer, **KONRAD** (b. 1876). First chancellor of the Western German republic. Born at Cologne, of a R.C. family, Jan. 5, 1876, he studied law and became a deputy judge in 1901. He then entered the municipal government in his native city, being elected lord mayor in 1917. A member of the centre party, after the 1918 revolution president of the Prussian state council, he refused the German

chancellorship and concentrated on his work in Cologne, which he helped to make enterprising and prosperous. Dismissed immediately the Nazis came to power in 1933, and subsequently twice imprisoned, Adenauer made no compromise and he was reappointed

lord mayor when the city was occupied by the Allies, 1945. Having the decisive share in creating the Christian Democratic Union, a mixed Protestant and R.C. bourgeois

party, he was made speaker of the Bonn assembly in 1949, and when elections to the first federal parliament gave his party 139 out of 402 deputies, became chancellor of a coalition cabinet of C.D.U., Liberals, and a German party, in that position negotiating with the Western Allies agreements that gave W. Germany increasing independence of action.

Adoption. The Adoption of Children Act, 1949, placed the adopted child in almost the same position as every other child. Adopted children are treated (in England but not in Scotland) as though they were actually the

children of their adopting parents for the purpose of intestate or testate succession. In Scotland as well as in England an adopted child and the adopter are within the prohibited degrees of consanguinity. For all adoptions a probationary period of three months is necessary before an order can be made. The Adoption Act, 1950, consolidated the law on adoption.

Africa. After the Second Great War, development of African resources was intensified, particularly in Belgian and British territory. Belgium further developed the minerals, especially uranium, of the Congo; in E. Africa, developed agriculture in the Rhodesias. The Ground Nut Scheme (*q.v.*) in Tanganyika and Kenya, put into operation in 1947, was an important social as well as industrial experiment.

All the British W. African colonies received new and more democratic constitutions during 1945-50.

Of the former Italian colonies, the U.N. decided that Libya (Cyrenaica and Tripolitania) should be united into one independent country by 1952, remaining meanwhile under British administration. Somaliland was placed under Italian trusteeship for ten years from 1950, thereafter to be independent. Eritrea continued under British administration pending a U.N. decision as to its future.

Egypt and the British govt. on behalf of Uganda entered into an agreement in 1949 for the development of irrigation and hydro-electric works (est. to take 25 years to complete) at the Owen Falls near Lake Victoria, headwaters of the White Nile. Work began at Jinja in 1950. (*See* Owen Falls Dam, in main text.)

The international-scientific committee for trypanosomiasis research, set up as a result of an international conference at Brazzaville in Feb., 1948, met for the first time in London, Feb. 8-11, 1949. The meeting was attended by representatives of the U.K., France, Belgium, Portugal, S. Africa, and S. Rhodesia. *See also* South Africa, in N.V.

Agent-General. The title of the Eire representative in London was changed from high commissioner to ambassador, July 26, 1950.

Agricultural Labourer. Minimum wage rates were increased on Nov. 12, 1950, to £5 for male, and £3 16s. for female, full-time workers for a 47-hour week.

Agriculture, ASSOCIATION OF. British society founded 1947 to protect the interests of agriculture and provide closer understanding between town and country. It developed from the body known as the Central and Associated Chambers of Agriculture, a central chamber for England and Wales having been started in 1866. The avowed object of the chambers was to

watch over all measures before parliament affecting the agricultural community, and to take such action, both in and out of parliament, as seemed desirable for their benefit. In 1918 the council of the chambers adopted the constitution of a national agricultural council, with representatives of the Agricultural Co-operative Society, National Farmers' Union, etc. Scotland had a similar independent organization. The headquarters of the Association of Agriculture are at 232-241, Abbey House, Victoria Street, London, S.W.1.

Air Records. In 1947-48 U.S. pilots set up a series of new absolute speed records, the last in this period being 670-98 m.p.h. by Major R. Johnson at Muroc, Sept., 1948, flying the North American F-86. British airmen set several new marks over the 100 km. "closed circuit," J. Derry achieving an average of 605.23 m.p.h., April 12, 1949, with the swept-wing D.H. 108; over the 1,000 km. closed circuit J. Cooksey, in a Meteor, made a record May 12, 1950, with an average speed of 511 m.p.h. The height record for aeroplanes was broken, March 23, 1948, by a British pilot, J. Cunningham, with a D. H. Vampire; he reached 59,446 ft.

Ajax, H.M.S. This British cruiser was broken up in 1949.

Ajmer. State of the Union of India, formerly the prov. of Ajmer-Merwara. Pop. (1950 est.) 730,000.

Alanbrooke, 1st Viscount. He was installed as constable of the Tower, in succession to Lord Wavell, Oct. 25, 1950.

Alaska. A bill granting statehood to Alaska passed the U.S. house of representatives in 1950.

Albania. The first republican government was formed, 1946, by Ahmed Hodja (Hoxha), simultaneously foreign minister. The mining of the Corfu channel off the Albanian coast led to the blowing up, Oct. 22, 1946, of the British destroyers Volage and Saumarez, thirty-eight being killed and forty-five wounded. The U.K. brought the matter before the security council of the U.N. April, 1947. In spite of support for Albania by the U.S.S.R., the international court of justice was invoked. (*See* Corfu Channel, in N.V.)

Albania concluded a 30-year treaty and customs union with Yugoslavia, Jan., 1947, but turned against Yugoslavia in that country's conflict with the Cominform; refused the offer of Marshall aid in July, 1947; and was involved in many border incidents with Greece, through assisting, and serving as a base of operations for, the Greek rebel army.

Alcan Highway. The official name for this strategic road connecting the U.S.A. and Alaska across Canada is Alaska Highway.

Alemán, MIGUEL (b. 1902). Mexican president. Born in Sayula, Vera Cruz state, the son of a revolutionary general, he practised as a lawyer, and became a justice of the federal appeals court and a member of the senate. He was governor of Vera Cruz state 1936-40. Minister of the interior and of government under President Avila Camacho from 1940. Alemán was elected president of Mexico, 1946.

Alexander, ALBERT V. British politician. He was created Viscount Alexander of Hillsborough in Jan., 1950. In March he ceased to be minister of defence, becoming chancellor of the duchy of Lancaster until Nov. 1951.

Algiers. Capital of Algeria. Following this city's role as France's war-time seat of government, 1943-44, and its economic development, its pop., unlike those of most other great French towns, increased rapidly. In 1947 the est. figures were 360,700 for Algiers proper, and 519,200 with suburbs, the city becoming third city of France, after Paris and Marseilles, in place of Lyons.

Allen, HERVEY. This U.S. writer died Dec. 28, 1949.

Allgood, SARA. This Irish actress died Sept. 13, 1950.

Allighan Case. Proceedings by a parliamentary committee of privileges, April-July, 1947, following public allegations by G. Allighan, M.P. for Gravesend, that M.P.s often disclosed confidential information to newspapers for cash payments. Allighan, a professional journalist, made the statements in an article in *World's Press News*.

The report of the committee of privileges, published July 30, after examination of witnesses, stated that the general charges were unfounded and constituted grave contempt and a gross breach of privilege. The only such transactions that could be established as having occurred were accounts of one private meeting of the parliamentary Labour party. Such an account in the *Evening Standard* was revealed to have been written by Allighan himself, who admitted to control of a press agency through which he had received £120 a month for such information. He was expelled from the house.

Altrincham. In 1948 Altrincham and Sale became a borough constituency.

American Loan. Loan from the U.S.A. negotiated by Lord Keynes in 1945. With the end of fighting, President Truman announced the immediate cessation of Lease-Lend (*q.v.* in main text). This left the U.K. with her entire industry converted to war production and no interval in which to re-equip it for peace. Keynes was therefore sent to Washington, and on Dec. 6, signed an agreement for a total loan of \$4,400,000,000 (approx. £1,100,000,000) to the U.K.

consisting of a final sum in settlement of lease-lend of \$650,000,000, and a credit for \$3,750,000,000 to be spent, between the date of ratification and the end of 1951, mainly on American goods needed for reconvertng British industry to peace use, the whole to be repaid over a 50-year period starting Dec. 31, 1951, with interest at 2 p.c. except during years when Great Britain's income from home-produced exports and invisible current transactions was less than the average amount of U.K. imports during 1936-38.

The loan agreement, which involved British support for the American programme for an international lowering of barriers to world trade, including the modification after one year of control by the U.K. of the use of sterling in the group of countries whose currency was related to the British pound, was ratified by the U.K. parliament by the end of the year. But congress did not ratify it until July 13, 1946, by which time prices had risen so steeply in the U.S.A. that a considerable part of the value of the loan had been whittled away before it became available. A year later, when the time came for the free convertibility of sterling into dollars to be put into force, more than two-thirds of the loan had already been expended. The drain on British dollar resources of allowing all those countries which had sterling credits to buy in respect of them in terms of dollars would have meant bankruptcy in a very short time, and convertibility was suspended three weeks after it started; at the same time drawings on the loan were suspended by the U.S.A. Stringent economies in buying in dollar countries followed, including the cessation of American tobacco imports. After further conversations inconvertibility of sterling was accepted by the U.S. govt. as imperative in the actual state of British economy, and on Dec. 5 the remainder of the loan was made available, the last instalment being drawn in Feb., 1948.

Ames, LESLIE. English cricketer. In 1950 he became the first professional appointed to the M.C.C. board of selectors.

Amethyst, H.M.S. British warship. A frigate of 1,490 tons, her armament including 6 4-in. and 8 2-pdr. guns, she was launched in 1943, had a speed of 20 knots and a complement of 192. On April 20, 1949, while proceeding up the Yang-tse-kiang to Nanking with supplies for the British embassy and to protect British nationals, the Amethyst came under heavy fire from Chinese Communist batteries, was severely damaged and ran aground on Rose Island, about 75 miles below Shanghai. Other British warships made abortive attempts to reach the vessel, but on April 21 an R.A.F. Sunderland brought medical aid. After unsuccessfully negotiating for three

months with the Communist authorities for a safe-conduct, the Amethyst's commander, Lt.-Cdr. J. S. Kerans, steamed down the river on July 30 and rejoined the British fleet, after coming under heavy fire at least twice.

On their return to the U.K., Nov., 1949, the ship's company received civic welcomes at Plymouth and London, and, in addition to other recognitions of individual feats of gallantry, were awarded the naval General Service medal, with an appropriate clasp. *Consult* Yangtse Incident, L. Earl, 1950.

Ancaster, EARL OF. In 1950 he resigned the office of lord great chamberlain, being succeeded by his son, Lord Willoughby de Eresby.

Anne (b. 1950), British princess. Daughter of Princess Elizabeth and the duke of Edinburgh, Anne Elizabeth Alice Louise was third in succession to the crown at birth, Aug. 15, 1950.

Ansaldo, GIOVANNI. Italian journalist. He was appointed editor of the Neapolitan daily paper *Il Mattino* on its reappearance in 1950.

Antarctic Exploration. In Feb., 1947, it was announced that the U.S. navy expedition to the Antarctic had made aerial surveys resulting in extensive alterations to the map of the Antarctic region. A large bay was discovered S.W. of the Thurston peninsula, to the W. of which was a range of mts. The bay forms an inland sea, 20,000 sq. m. in area, thus reducing the estimated area of the mainland. Some 2,000 nautical miles of newly discovered coast were charted for the first time, and 75,000 square miles, previously uncharted, were identified as ocean.

An Antarctic research expedition sponsored by the Australian govt. sailed in 1947 to carry out researches into cosmic rays and weather conditions from a base on Heard I., 2,500 m. S.W. of Fremantle. It was reported, Mar., 1950, that Big Ben, 11,000 ft. peak on Heard I., is an active volcano.

Survey work was carried out, 1948-50, in Grahamland by parties whose members were mainly British from bases on Stonington I., Marguerite Bay, and at Hope Bay. Investigations into mineral resources were also undertaken and meteorological information collected. In 1950, aircraft of the Norwegian-British-Swedish expedition to Queen Maud Land were stated to have surveyed hundreds of square miles and discovered a hitherto unknown mountain range. One of the main objects of this expedition was the observation of climatic fluctuations.

In 1949 the previously uncharted strait between Ellisee and Cornwallis Islands, in the South Shetlands, was named Prince Charles Strait, after the son of Princess Elizabeth and the duke of Edinburgh.

"Antrycide." Proprietary name of a drug produced by a team

of British scientists of I.C.I. Its existence was announced by the colonial office in Dec., 1948. It was hoped the drug, a white crystalline powder, soluble in water, would prove to be a cure for, and a prophylactic against, forms of trypanosomiasis (nagana) occurring in animals, and transmitted from one host to another by the tsetse fly, and thus open areas of Africa infested with the fly to cattle raising. Administered by hypodermic injection, it showed great promise in its early tests, but further experiments under field conditions revealed marked variations in its efficacy.

Apsley House. In 1947 this house, presented by the nation to the 1st duke of Wellington, was given to the nation by the 7th duke for preservation as a Wellington museum. A condition was that it should continue to be also a residence of dukes of Wellington.

Aquitania. Withdrawn from active service, 1949, she returned to the Clyde as scrap, 1950.

Arab League. Israel signed an armistice with Egypt on Feb. 24, 1949, with Lebanon on March 23, with Transjordan (Jordan from June 2) on April 3, with Syria on July 20.

An Arab "government" claiming sovereignty over the whole of Palestine was formed at Gaza, Sept. 22, 1948, Hussein, the mufti of Jerusalem, being a week later elected president of a "national assembly" there; this govt. was recognized by all the league members except Transjordan. Abdullah on Dec. 20 approved a proposal for the union of Transjordan and Palestine made by a congress of Palestine Arabs held at Jericho; and on the same day nominated a new mufti of Jerusalem. Following general elections, April 11, 1950, in Jordan and the part of Palestine under Jordanian control, this proposal was endorsed by a joint meeting of the two houses of parliament, and Abdullah proclaimed the union on April 24.

Owing to the disapproval by the other Arab countries of this annexation of Arab Palestine, Jordan did not send a representative to the league meeting held in Alexandria in June, 1950, at which a collective security pact, modelled on the N. Atlantic treaty, was signed by five of the member countries, Iraq abstaining on the ground that the pact would be useless if Jordan did not adhere to it.

Arab Legion. During the disturbances in Palestine before the ending of the British mandate in 1948, the Arab Legion was extensively employed on police duties in Arab areas of the country. When hostilities broke out between the Arab states and the new state of Israel, on the night of May 14-15, 1948, the Arab Legion bore the brunt of the fighting for the Arab cause. During its actions in Pales-

time, the Arab Legion's British officers were withdrawn from front-line units. *Consult* Story of the Arab Legion, J. B. Glubb, 1948.

Ardennes, FIGHTING IN THE. At Bastogne, in 1950, a memorial was dedicated to 76,890 Americans killed, wounded, and missing in the Ardennes fighting of 1944-45.

Argentina. On Feb. 24, 1946, Juan Domingo Perón, leader of the National Labour party and the Peronist Radicals, was elected president of the republic in the first elections held since 1938, and inaugurated June 4. The "state of siege" which had existed with one brief interval since Dec., 1941, was declared lifted, May 24, and political parties resumed full activity. A new constitution was introduced (see p. 596). The central bank, the rlys., the internal air lines, and some shipping were nationalised; a five-year plan began in 1947; in the same year women were given the vote, and a special tax on all employers (excluding employers of domestic servants) was introduced for the benefit of state-aided industries. A general election held in Dec., 1948, was boycotted by opposition parties. An act of Sept., 1949, recognized the legality of all existing parties, but forbade party coalitions at elections.

University fees were abolished June, 1949. A pipe-line for natural gas, 1,100 m. long, from the Patagonian oilfields to Buenos Aires, was completed during 1947-49.

Over the British crown colony of the Falkland Is. and their dependencies, Argentina in 1946 renewed claims of sovereignty made in 1936. She established bases in the S. Shetlands, and an Argentine naval squadron held manoeuvres in British Antarctic waters in Feb., 1948. In this matter Argentina acted in conjunction with Chile, who also put forward claims. Both countries rejected a British proposal to submit the dispute to the international court of justice. An agreement between Argentina, Chile, and the U.K., reached Jan. 18, 1949, not to send warships S. of lat. 60° during the antarctic summer, except for customary routine movements, was renewed for 1950 and 1951.

Ark Royal. A second British aircraft carrier of this name was launched by the queen at Birkenhead, May 3, 1950.

Arsenal. This football club won the F.A. cup in 1950, for the third time.

Ashmolean Museum. The first museum in Gt. Britain to be devoted entirely to Eastern art was opened in 1949 at Oxford, as a branch of the Ashmolean.

Assam. State (formerly prov.) of India. A severe earthquake followed by flood, in the Brahmaputra valley (Sibsagar and Lakhimpur dists.) in Assam killed more than 570 and did immense damage, Aug. 15, 1950. Pop. (1950 est.) 8,510,000.

Assumption. On Nov. 1 (All Saints' Day), 1950, the Pope proclaimed the new dogma of the bodily Assumption of the Virgin Mary into heaven.

Astatine. Radio-active element, symbol At, atomic no. 85, formerly called alabamine in the U.S.A. One isotope (mass no. 218) occurs in the radium series, another (mass no. 216) in the thorium series; both emit α -rays and have a half-life of seconds only. An artificial isotope (mass no. 211) decomposes partly by emitting α -particles, and partly by k -electron capture.

Athletics. British records in July, 1950, included: 220 yds. E. McD. Bailey 21.1 secs. 440 yds. A. S. Wint 47.2 secs. 120 yds. hurdles W. F. Porter (U.S.A.), 13.9 secs. 440 yds. hurdles R. B. Cochran (U.S.A.), 52.7 secs.

Atlantic Flights. *North Atlantic.* By 1950 the major European, U.S., and Canadian transport companies were operating regular daily landplane services via London Airport, Prestwick, and Shannon (Rineanna), or the Continental capitals, to Gander and thence on to New York, Montreal, etc. Some eastbound services were non-stop New York to London. A more northerly route passed through Keflavik, in Iceland, and sometimes Bluie West, in Greenland, while other lines called at the Azores and Bermuda. A series of Weather Ships (v.v. in main text) was established by governments at the request of the International Civil Aviation Organization.

South Atlantic. B.O.A.C. and other national companies had regular services crossing the ocean between Dakar and Natal or Recife (Brazil). Other lines covered the routes Canary Is.—Cape Verde—Caracas (Venezuela), Cape Verde—Natal, and Dakar—Paramaribo (Surinam).

Atomic Bomb. Rumours of a "super bomb, 1,000 times as effective as the first atomic weapons," were started in the U.S.A., Nov., 1949, by a remark by Senator Edwin Johnson in a television programme. They were confirmed by President Truman's announcement, Jan. 31, 1950, that he had instructed the atomic energy commission to continue work on the "so-called hydrogen or super bomb." Later, various scientists unofficially gave their opinion on how such a bomb could be constructed. Most were agreed that it would derive its energy by building up helium nuclei out of separate hydrogen atoms; since the total mass of the helium nucleus is less than the sum of the masses of the nuclei thus synthesised, the surplus mass would appear as free (explosive) energy. To effect the synthesis very high temperatures (of the order of millions of degrees centigrade) would be necessary, and it

was presumed that these would be supplied by an ordinary plutonium bomb acting as a detonator.

The building-up of helium from four nuclei of ordinary hydrogen is believed to take place in the centre of the sun, but by a catalytic process too slow for use as an explosive. Three alternative processes were therefore suggested as possible bases for the bomb: (1) production of light helium (helium-3) plus one neutron from two nuclei of deuterium (${}^2\text{H} + {}^2\text{H} = {}^3\text{He} + {}^1_0\text{n}$); (2) production of two helium nuclei from one nucleus of lithium and one of ordinary hydrogen supplied in the form of lithium hydride (${}^6\text{Li} + {}^1\text{H} = 2{}^4\text{He}$); (3) production of one helium nucleus from one nucleus of tritium and one of ordinary hydrogen (${}^3\text{H} + {}^1\text{H} = {}^4\text{He}$). The third of these nuclear reactions would release more than seven times as much energy, weight for weight, as uranium-235 or plutonium, and since no critical mass is involved, there would be no theoretical limit to the size of any one bomb. The main technical problem would appear to be that of keeping the hydrogen and tritium sufficiently concentrated during the fission of the detonator. It was also pointed out that tritium in any quantity can be made only at the expense of a corresponding quantity of plutonium; that the hydrogen bomb would necessarily be much more powerful than the plutonium bomb, and that the plutonium bomb was already too powerful for many military purposes.

Atomic Energy Act. Act of the U.K. parliament, 1946, which imposed on the minister of supply the duty of promoting and controlling development of atomic energy.

Attlee, CLEMENT RICHARD. British statesman. He ceased to be minister of defence, 1946, on appointing A. V. Alexander to the office. Attlee took prime responsibility for putting before parliament the treaty which gave dominion status to India and Pakistan in 1947. In Oct., 1948, April, 1949, and Jan., 1951, he presided over conferences of Commonwealth premiers or their representatives, held in London. At the general election of Feb., 1950, he was returned for Walthamstow W., continuing in office as prime minister. He flew to Washington in Dec., 1950, to confer with President Truman on the world situation.

Auriol, VINCENT (b. 1884). French president. Born at Revel, Haute-Garonne, Aug. 27, 1884, he was educated at Toulouse, where he practised as a lawyer. Socialist deputy for Haute-Garonne 1914-40, he achieved cabinet rank as minister of finance, 1936.

Later he was twice minister of justice under Blum. He was one of the 80 deputies who voted "no" when Pétain called on the chamber to surrender its powers, was arrested by Vichy police, and imprisoned in the château de Pellevoisin, Vals-les-Bains, and Aubenas, where he fell dangerously ill. Sent back to his home at Muret under house arrest, he escaped to London, 1943. He joined de Gaulle, and was a member of the consultative council in Algiers and in Paris, where de Gaulle appointed him minister of state in 1945. A member of the constituent assembly, he was elected its president in succession to F. Gouin, 1946, and was chosen, Jan. 16, 1947, first president of the fourth republic. He gave the position of president more importance in the constitution by new, but judicious, use of his powers. He and Mme. Aurriol paid a state visit to the U.K., March 7-9, 1950.

Australia. Labour, confirmed in power in the 1946 elections, was defeated by the combined Liberal and Country parties in 1949, R. G. Menzies (*q.v.* in main text) forming a new govt.

The 40-hour week was established in 1947, with effect from Jan., 1948. The National Health Service Act, 1948, gave the govt. authority to develop medical, optical, and dental services. By the Bank Nationalisation Act of 1947, the federal govt. proposed to nationalise all private banks. Eleven banks, however, and the state govts. of S. Australia, Victoria, and W. Australia challenged the validity of the act under the federal constitution, and the decision of the Australian high court, declaring a number of sections invalid, was upheld by the privy council in London. The act was repealed in 1950. An act of 1949 conferred the federal vote on aboriginals, provided they were entitled to vote under state laws or had served in the defence forces. An act dissolving the Communist party of Australia was passed in 1950.

The foundation stone of a national university was laid at Canberra, Oct. 24, 1949.

During 1948-49, the Australian parliament voted two gifts of £A10,000,000 (£8,000,000) each to the U.K. as a contribution towards European reconstruction.

To carry through a scheme for diverting the upper waters of the Snowy river (which discharges into the Tasman Sea) through the Snowy mts. into the Murrumbidgee and Murray rivers the Snowy mts. hydro-electric authority was set up under an act of 1949. The undertaking involved the building of seven dams, 86 m. of tunnels, 550 m. of canals, and 16 power stations, and was est. to take 25 years to complete and to cost £200,000,000. It was to provide water for irrigation, as well as power, to Victoria and New South Wales.

By the end of 1949, the pop. of Australia exceeded 8,000,000.

Australian Flights. By 1950 the through service between the U.K. and Sydney (B.O.A.C. and Qantas Empire Airways in association) was operated by landplanes in a total time of 3½ days. Tasman Empire Airways operated a connecting link to Auckland, New Zealand, and British Commonwealth Pacific Airlines (with Pan American Airways) eastward from Sydney and Auckland. Canadian Pacific Air Lines provided a third trans-Pacific service.

Austria. The first elections in Nov., 1945, of an Austria once more independent gave 85 of the 165 seats in the lower house to the Communists. The second, Oct., 1949, gave 77 to the People's party, 67 to the Socialists, 16 to a new Union of Independents, and 5 to the Communists. In the upper house, members of which were nominated by the provincial Diets, the corresponding figures were 25, 20, 4, and 1.

The cabinet formed after the first election by Leopold Figl (People's party) continued in office. The federal president, elected Dec. 20, 1945, for six years, was a Socialist, Karl Renner (d. 1950). As both a former enemy and a liberated country, Austria was granted by the Allies rights not given to (*e.g.*) Germany: namely, the prompt recovery of sovereignty, and the right to re-establish diplomatic contacts. But she remained under Allied occupation, divided into four zones, Vienna being divided into four sectors.

Economic recovery was delayed by the stubborn refusal of the Kremlin to agree on Allied terms for a peace treaty, chief stumbling block being Russia's claim to all German assets in Austria (in which she included virtually everything that had come under Nazi control) and her confiscation of Austria's most valuable property, the oil wells at Zistersdorf.

Four currency reforms, cancelling pre-war debts and reducing and freezing others, had assisted economic recovery. That of Nov. 21, 1949, involved devaluation and the establishment of three different exchange rates according to the nature of the transaction involved.

The state of war with Austria was declared at an end by the U.K. Sept. 16, 1947, by Australia Oct. 7, 1948. See also European Recovery Programme in N.V.

Avalanche. A series of snow avalanches in the Alps of Switzerland, Austria, and Italy in Jan., 1951 (the worst in the area since 1827) killed about 300 and did damages est. at £3,000,000.

Aycliffe, or Newton Aycliffe. Proposed new town in Durham co., England, planned as a satellite town for Darlington with a pop. of 10,000. The order for the new town was given by the minister of

town and country planning, April 25, 1947, under the New Towns Act of 1946. Lord Beveridge was appointed chairman of the Aycliffe development corporation.

Aylesford. The Carmelite monastery here, surrendered to the crown in 1538, was reopened in 1949. Aylesford has large paper mills.

Ayrshire. Under the 1948 redistribution of parl. seats Ayrshire had 5 co. constituencies (one of them including Bute).

Bahamas. A 25 years' agreement for the use by the U.S.A. and the U.K. of sites in the Bahamas as proving grounds for unarmed guided missiles was signed in Washington, 1950.

Bailey Bridge. In 1950 a Bailey bridge for foot passengers was built across the Thames by Royal Engineers, just above Hungerford Bridge, to link the left bank of the river with the Festival of Britain exhibition site.

Balanchine, GEORGES. Dancer and choreographer. In 1948 he became artistic director of the newly-formed New York City Ballet company, which made its first appearance in England in 1950.

Balchin, NIGEL MARLIN (b. 1908). British novelist. Born Dec. 3, 1908, he was educated at Dauntsey's school and Peterhouse, Cambridge, and in his subsequent career combined industrial psychology and authorship. During the Second Great War he acted as deputy scientific adviser to the army council. His best-known novels, marked by realism and sincerity, include *Darkness Falls from the Air*, 1942; *The Small Back Room*, 1943 (filmed, 1949); *Mine Own Executioner*, 1945 (filmed, 1948); *A Sort of Traitors*, 1949.

Baldwin, 2ND EARL. He resigned his post as governor of the Leeward Is. in 1950.

Balham. The parl. constituency of Balham and Tooting was abolished in the redistribution of seats in 1948.

Bamangwato. Tribe of the Bechuana. A dispute over the tribal chieftainship arose in 1949. The chief-designate, Seretse Khama, son of chief Sekgoma II, while studying law in England, married (1949) a white woman, Ruth Williams, and a tribal assembly in June, 1949, accepted Seretse as chief despite his refusal to give up his wife. His uncle, Tshekedi Khama, who since 1926 had acted as regent during Seretse's minority, and who with his supporters opposed the mixed marriage, thereupon announced that he and 44 headmen would go into voluntary exile, as he believed that the position of Mrs. Khama would lead to a breakdown of tribal administration.

A judicial commission was appointed to decide on Seretse's fitness to be chief, and when Mrs. Khama arrived in Bechuanaland in Aug.,

1949, she was treated as a private person. The findings of the commission were not made public, but in March, 1950, the British govt. announced its decision to withhold recognition of Seretse as chief of the Bannangwato for at least five years and to exclude him from the Bechuanaland protectorate, except by special permission, during that period. Clashes between supporters of Seretse and Tshekedi occurred in Serowe, the tribal capital, in April.

Seretse was allowed to go to Lobatse to settle a dispute with his uncle as to an inheritance, and to visit his wife at Serowe April 16-21, and again May 16-June 12, after the birth of their daughter. In Aug. he was ordered to leave Bechuanaland, and with his wife and daughter flew to London. *Consult Seretse Khama and the Bannangwato, J. Mockford, 1950.*

Barker, Sir HERBERT. This British manipulative surgeon died July 21, 1936.

Bartlett, VERNON. This British politician and publicist retired from parliamentary life in 1950.

Baruch, BERNARD MANNES (b. 1870). American economist. Born Aug. 19, 1870, at Camden, S.C., he was educated at the City college of New York. He entered finance and by 1912 was reputed to have amassed a fortune of 12-15 million dollars on Wall St. During the First Great War he was entrusted with complete charge over U.S. war production, and at Versailles was economic adviser to Pres. Wilson. In the Second Great War he was personal adviser to J. F. Byrnes as director of the office of war mobilisation 1943-45. In March, 1946, Pres. Truman appointed him U.S. delegate to the U.N. atomic energy commission, and in June Baruch submitted his country's proposals for international atomic control. These were eventually accepted as the basis for a report to the security council. Baruch resigned from the commission in Jan., 1947, having completed his task.

Barwani. This former state of central India was merged in Madhya Bharat, 1948.

Basildon. Proposed name for a new town of Essex, England, to be built under the New Towns Act, 1946, for a pop. of 50-60,000. The 7,000-acre site is near Pitsea.

Baudouin, PRINCE (b. 1930). Belgian crown prince, also styled duke of Brabant. Born Sept. 7, 1930, elder son of Leopold III and his first wife, Astrid, he was baptized Baudouin Albert Charles Leopold Axel Marie Gustave. During the Second Great War he was evacuated in 1940 first to France and later to Portugal, but subsequently returned to join his father at Laeken, near Brussels, during the German occupation. He lived either at Laeken or at Ciergnon, in the Ardennes, until the approach

of Allied forces in 1944, when the Germansevacuated the royal family first to Hirschheim, on the Elbe, and later to Strobl, Austria.

After liberation by U.S. forces in May, 1945, he lived with the rest of the family chiefly at Prégny, near Geneva, where he attended a private school. In 1948 he visited the U.S.A., and on July 22, 1950, he returned to Belgium with his father. On Aug. 1, the king delegated his powers to Baudouin, pending the Prince's accession to the throne on his 21st birthday.

Bautzen. At the end of the Second Great War this town of Saxony came within the Russian zone of occupation. A concentration camp established here by the Nazis was maintained in use by the Russians until Jan. 16, 1950. Handed over to the German ministry of the interior, it remained in use as a prison.

Baxter, A. BEVERLEY. He became M.P. for Southgate, 1950.

Bayar, CELAL (b. 1884). President of the Turkish republic. As a youth he entered the service of the Deutsche Orient bank, but soon turned his attention to politics. Joining the Nationalist party, he rapidly rose to prominence as a leader and loyal follower of Kemal Atatürk (*q.v.* in main text). Deputy for Smyrna (Izmir), 1923, Bayar was minister for reconstruction, 1924, but after a few months returned to banking. Appointed to the key position of minister of national economy, 1932, he was prime minister, 1937-39.

Forming the Democratic party, 1945, he was elected president of the republic after his party had obtained a majority in the grand national assembly by the general election of 1950. He succeeded Ismet İnönü (*q.v.* in main text).

B.C.G. This anti-tuberculosis vaccine (full name *Bacillus Calmette Guérin*) is a "live" vaccine prepared from a strain of tubercle bacillus which has been so attenuated that it has lost much of its capacity for producing disease. It has been widely used in France and in Scandinavia to protect persons liable to contract the disease, *e.g.* children of tuberculous parents and nurses in sanatoria. Controlled trials to last three years were begun in 1950 by the British medical research council.

Beasley, JOHN ALBERT (b. 1895). Australian politician. Born at Werrilee, Victoria, Nov. 9, 1895, he sat in the house of representatives as Labour member for W. Sydney, 1928-46, becoming leader of the N.S.W. parl. Labour party, 1931, and of the federal Labour party, 1940. He served as asst. minister for industry and external affairs 1929-31; minister of supply and shipping 1941-45; and minister of defence 1945-46. In 1946, he became resident Australian minister in London, being appointed high commissioner the following year.

Beatty, 1st EARL. His bust, by Wm. Macmillan, R.A., was placed in Trafalgar Square, London, 1948.

Beggar's Opera, THE. There was a further notable revival at Cambridge, and later in London, in 1948, the music for which was newly scored by Benjamin Britten.

Beira. Town of Mozambique. A 20-year agreement on the use of the port of Beira for Rhodesian trade was signed in Lisbon, June 17, 1950, by the U.K., Portugal, and S. Rhodesia. The Portuguese govt. was to maintain the port and the Beira rly. in a state of efficiency adequate for traffic to and from S. Rhodesia, N. Rhodesia, and Nyasaland; the U.K. and S. Rhodesia were to ensure the use of Beira for traffic for which that port is the natural inlet or outlet.

Belgium. The situation of Belgium after the Second Great War was better than that of any other of the occupied countries. She had suffered little destruction during the invasion of 1940, and the greater part of the country, including the capital, was liberated with great speed and little damage in Sept., 1944; while through the consequent presence on her soil of U.S. forces and her control of valuable minerals in the Congo she earned large sums in dollars. As a result, her immediate post-war recovery was rapid. But as her dollar reserves dwindled, unemployment increased; and the continued internal tension caused by the "royal question" had a deleterious effect on the country's life.

Leopold, in exile in Austria and later in Switzerland, refused to abdicate; but successive govts., aware of the hostility to him of a large part of the pop., were unwilling to invite him to return. In 1946 the king announced that he would be prepared to accept the result of a referendum. When the govt. reluctantly held a referendum on March 12, 1950, 57.68 p.c. of the votes were cast for the king; but the Socialists, who constituted a third of both houses of parliament elected in June, 1949, had declared that they would actively resist the king's return if the vote in his favour were less than 66 p.c. The govt., a Christian Social-Liberal coalition, resigned on March 18, and no leader could form a new cabinet. The Socialists were willing to accept Leopold's suggestion, broadcast in a recorded statement, that he should return, be restored to the royal honours, and then delegate his powers for a time to his eldest son Baudouin; but the king rejected their demand that he should leave the country again after the delegation. The prince regent, therefore, on the advice of the Christian Social leaders, dissolved parliament.

New elections on June 4, 1950, gave the Christian Social party in

the house of representatives 108 (instead of 105) seats, the Socialists 76 (66), the Liberals 21 (29), the Communists 7 (12). The Christian Social party, which formed a new govt., also had a small majority in the senate. Despite the smallness of its majority, and the dangerously high feeling in the country, the new govt. called a joint meeting of the two houses of parliament which ended the regency and recalled Leopold. He arrived in Brussels July 22. Strikes and other demonstrations seemed to presage civil war; but on Aug. 1 Leopold agreed to delegate his powers immediately to his elder son Baudouin pending Baudouin's accession to the throne on his 21st birthday, Sept. 7, 1951. Disorders then ceased. *See also* Benelux (N.V.); European Recovery Programme (N.V.); North Atlantic Treaty (N.V.); Western Union (main text).

Belgrade. Capital of Yugoslavia. In 1948 work was begun on the building of a new city on the opposite side of the rivers Save and Danube from that on which the old capital stands. The new city, to house administrative departments, was planned for a pop. of 250,000.

Benelux. Term coined to designate Belgium, the Netherlands, and Luxembourg as a customs union, an agreement for which, concluded by the exiled govts. in London in 1944, was later ratified. Post-war differences in economic conditions within the three countries led to postponement of its fulfillment; but the intention to bring it eventually into effect continued.

Bengal, West. State (formerly province) of India. Pop. (1950 est.), 24,320,000.

Ben-Gurion, DAVID (b. 1886). Jewish politician. A native of Plonsk, Poland, he went to Palestine in 1900,

was exiled by the Turks, 1915, and became in the U.S.A. one of the organizers of the Jewish forces to fight against Turkey in the First Great War, serving himself in Allenby's Jewish battalion. A leading Zionist and trade unionist, he was general sec. of the federation of Jewish labour in Palestine, 1921-35, and a member from 1933 and chairman from 1944 of the executive of the Jewish agency and the world Zionist organization. He was prominent in the events leading to the formation of the Israeli state, 1948, and became its first prime minister and minister of defence. He wrote *We and Our Neighbours*, 1930, and *The Working Class and the Nation*, 1933.

Benthoscope. Under-water observation chamber. Closely resembling a bathysphere (*q.v.* in main text), it is designed to descend to a depth of about 10,000 ft., whereas the former does not usually go below 4,000 ft. A benthoscope which was lowered to a depth of 4,500 ft. (then a record), off the Californian coast, Aug. 16, 1949, was a steel sphere with a wall $1\frac{1}{2}$ in. thick and an outer diam. of 57 $\frac{1}{2}$ in. Two people could enter it through a 15-in. door, sealed with a rubber gasket; it had two windows of fused quartz. It was suspended from a barge on a steel cable attached to a winch.

Benue. This African river gave its name to a province of N. Nigeria formerly called after its chief town Nassarawa.

Bergius, FRIEDRICH. This German chemist died March 29, 1949.

Berkelium. Artificial, radioactive element, symbol Bk, at. no. 97, first produced in 1950 at Berkeley, California, by bombarding americium-241 with α -particles. Half-life, 4.8 hr.

Berkshire. In the 1948 redistribution of parl. seats Berkshire was divided into four co. constituencies, and Reading in addition was allotted two members.

Berlin. Four-power control of the former German capital, through an Allied *Kommandatura*, soon ceased to function harmoniously owing to the different intentions and methods of the U.K., the U.S.A., and France in the western sectors of the city, and of Russia in her eastern sector. Accentuated after the formation of the Socialist Unity party, the conflict became an open one when the mayor, Otto Ostrowski, joined that party and was forced to resign in April, 1947, by the Socialist, Christian Democrat, and Liberal majority in the city assembly. The Russian c.-in-c. refused to accept the Social Democrat, Ernst Reuter, elected as his successor; and the acting mayor Luise Schröder and the deputy mayor Ferdinand Friedensburg found themselves systematically frustrated by the Socialist Unity party, backed by the Russians, in their attempts at reconstruction in the devastated city, where 567,000 dwellings, with 2 $\frac{1}{2}$ million living-rooms—43 p.c. of the pre-war total—had been destroyed during the war. Meetings of the *Magistrat* (executive committee) and the city assembly were increasingly subjected to external Communist-inspired interference and even violence.

Eventually the Russian members marched out of the Allied *Kommandatura*, March 20, 1948. When on June 18 the U.K., the U.S.A., and France announced their decision to introduce a reformed currency, the *deutsche Mark*, into their

zones from June 21, the Russians stopped all passenger trains and motor and foot traffic between their zone of Germany and the rest of the country at midnight, June 18-19, "as a protection against an influx of worthless currency"; and on June 24 they stopped goods trains also, under the pretext of technical trouble on the line. On the same day they introduced a revalued mark, under their exclusive control, into their zone, meaning to make it also the currency of all Berlin. The western powers prevented that by introducing the *deutsche Mark* in their sectors of Berlin. Eastern zone marks rapidly depreciated, since they were much less stringently controlled, the unofficial rate of exchange for one western mark fluctuating from 5 $\frac{1}{2}$ to 10 eastern marks; and the use of two currencies of differing value within Berlin created further strain in the city's economy.

The Russian Blockade, 1948-49

The Russian blockade would have meant starvation, or surrender to Moscow, for 2 $\frac{1}{2}$ million Berliners in the western sectors if the U.S. and British authorities had not come to their rescue with the Air Lift (*q.v.* in main text), June 26, 1948-Sept. 30, 1949. An attempt to settle the conflict was made in Moscow, July-Aug., 1948, by the three western powers. Stalin agreed to the raising of the blockade, with a simultaneous acceptance for the whole of Berlin of the eastern mark, under four-power control. Subsequent negotiations in Berlin, however, lasting until Sept. 25, revealed that the Soviet authorities on the spot were not prepared to carry out this agreement. The dispute was therefore submitted to the U.N. security council, where the smaller powers unsuccessfully attempted mediation.

The elected city assembly, prevented by force by the Communists from sitting in the town hall (which lay in the Russian sector), moved to the British sector in Sept., 1948, without the Socialist Unity party members. Municipal elections held Dec. 9, in the western sectors, were not recognized by the Soviet authorities. Social Democrat, Christian Democrat, and Liberal candidates stood, the Socialists securing 64.4 p.c. of the votes on a poll of 86 p.c., of whom only 3 p.c. returned invalid votes. Next day Reuter was again elected mayor (he was again refused recognition by the Russians); Luise Schröder and Friedensburg were elected deputy mayors. Reuter's election was confirmed by the city assembly Jan. 14, 1949. On Nov. 30, 1948, the Socialist Unity party members of the city assembly (26 in number out of 130) met in the state opera house, elected Fritz Ebert, son of the first president of the Weimar republic, provisional mayor, and set up a provisional *Magistrat* which claimed responsibility for the whole of Berlin. This *Magistrat* took

over the town hall, and continued to function in the Soviet sector.

Negotiations in New York between the four powers involved led to the end of the blockade on May 12, 1949, but the air lift was maintained four months longer in order to build up stocks against its possible repetition. Minor sources of conflict continued to divide the city's Allied rulers; among them, alleged trespassing on both sides, kidnapping of western Berliners by the Russian-organized "people's police," a dispute over the payment of Berlin railwaymen. These men, though they served all Berlin, were paid in eastern marks, and to secure payment of at least part of their wages in western marks, they went on strike from May 20 to June 28.

During May-Sept., the western commandants in Berlin attempted in vain to bring about a reunification of the divided city. On Sept. 30 the W. German *Bundestag* passed a resolution advocating the inclusion of Greater Berlin in the W. federal republic; and on Oct. 8 the *Magistrat* of western Berlin applied to be admitted as the twelfth *Land* of the federation. The Allied high commissioners, though favouring close economic cooperation between W. Germany and W. Berlin, could not countenance such a development because of the possible repercussions in the Russian zone. With Allied approval, the W. German govt. made substantial grants to Berlin and supported its industry by placing orders with its factories.

Elections for the chamber of deputies in W. Berlin, Dec. 3, 1950, gave the Social Democrats 44.7 p.c. of the votes, and the largest number, but no longer an absolute majority, of seats. Social Democrats 61 (76); Christian Democrats 34 (26); Free Democrats 32 (17). The *Magistrat* was replaced by a senate of 16, based on the membership of the new chamber.

Bermudas. The use of motor vehicles, prohibited in 1908, became legal (with limitations) in 1946. In 1950 the Admiralty announced that for reasons of economy it had been decided to close Bermuda dockyard, one of the oldest British naval establishments overseas.

Bernadotte, FOLKE, COUNT. Swedish humanitarian. In 1950 the Israeli govt. agreed to pay £19,500 to the U.N. as reparation for the assassination of Bernadotte.

Berners, 14TH BARON. This English composer and author died April 19, 1950.

Bernhard, PRINCE. An Act of the Netherlands parliament, 1950, named Prince Bernhard as regent should Queen Juliana die before their eldest daughter Beatrix came of age.

Bevan, ANEURIN. This British politician became minister of labour and national service Jan., 1951.

Beveridge, WILLIAM HENRY BEVERIDGE, BARON. He was appointed chairman of the Aycliffe de-

velopment corporation in 1947, and of the Peterlee development corporation in 1949. The broadcasting committee of enquiry, 1949, of which he was chairman, issued its report Jan. 18, 1951.

Bevin, ERNEST. British politician. At the general election of Feb., 1950, he was returned for Woolwich, E. He retained his post as secretary of state for foreign affairs.

Bhopal. State of India. Pop. (1950 est.), 850,000.

Bible. In 1949 work was begun under an interdenominational committee on a new translation from the original languages into modern English. Represented on the committee were the Churches of England and Scotland, Methodists, Congregationalists, Baptists, English Presbyterians, the Society of Friends, the Churches in Wales and Ireland, the British and Foreign Bible Society, the National Bible Society of Scotland, and the Oxford and Cambridge university presses. See also Knox, R.A., in main text.

Bibliography, BRITISH NATIONAL. Official catalogue compiled by the British Museum, first pub. in 1950. Issued weekly and yearly, it lists books newly published in Great Britain. The responsible council was approved by the British Museum, Royal Society, Library Assoc., Publishers' Assoc., Booksellers Assoc., National Book League, and other bodies.

Bidault, GEORGES. French politician. His government was defeated on a vote of confidence, June 24, 1950, and he resigned. He was deputy premier in H. Queuille's ministry July 2-4, 1950.

Bihar. State (formerly prov.) of India. Pop. (1950 est.) 39,420,000.

Birkenhead. Under the redistribution of 1948 Birkenhead gave its name to a bor. constituency, but parts of it vote in Bebington bor. constituency.

Birkett, SIR WILLIAM NORMAN. This British judge was appointed a lord justice of appeal in 1950.

Birmingham, GEORGE A. This Irish author (Rev. James Hannay) died in London Feb. 2, 1950.

Black, JAMES MACDOUGALL. This Scottish ecclesiastic died Oct. 18, 1949.

Blamey, SIR THOMAS ALBERT. Australian soldier. He was promoted field-marshal 1950.

Bliss, ARTHUR. This British composer was knighted 1950.

Blum, LÉON. This French statesman died March 30, 1950, at his home near Versailles.

Bolivia. In July, 1946, Villaroel, dictator of Bolivia, was deposed and killed. A provisional govt. arranged a presidential election in Jan., 1947. Following a close vote and a recount, Enrique Hertzog was elected. Hertzog, at his inauguration, announced the formation of a socialist ministry. In 1949, Hertzog resigned on grounds of ill-

health, and the vice-pres., Mamerto Urriolagoitia, succeeded him. A military revolt in the southern provinces, led by the extreme right-wing "national revolutionary movement," was suppressed by govt. forces in Sept., 1949. A new govt. was formed Jan. 28, 1950, mainly composed of members of Urriolagoitia's party, the socialist republican union. The govt. declared the Communist party illegal April 11, 1950.

Bombay. State (formerly prov.) of India. Pop. (1950 est.) 32,680,000.

Bondfield, MARGARET. British politician. She was made C.H. in 1948. Her autobiographical book, *A Life's Work*, appeared 1949.

Bone, SIR MUIRHEAD. His brother James, mentioned in the same entry, was made C. H. in 1947, and pub. *London Echoing*, 1948.

Booth, EVANGELINE. Salvation Army leader. She died in New York July 17, 1950.

Boswell, JAMES. His private papers, including the MSS. of his *Life of Johnson* and *Tour of the Hebrides*, journals, and correspondence, were purchased by Yale University in 1949. His *London Journal*, 1762-1763, was pub. 1950.

Botwinnik, MIKHAIL (b. 1911). Russian chess player. Born in St. Petersburg (Leningrad) Aug. 17, 1911, he was a first class player at the age of 14 and in 1931 won the championship of the Soviet Union. He tied for first place with Capablanca in Moscow, 1935, and at Nottingham, 1936. In the first world championship after the Second Great War, 1948, Botwinnik gained the title, Max Euwe (Netherlands) and S. Reshevsky (U.S.A.) being among the runners-up.

Boucicault, DION. His daughter Nina (mentioned in the same entry) died Aug. 2, 1950.

Boulder Dam. See Hoover Dam in N.V.

Boulton, SIR ADRIAN. In June, 1950, he retired from the B.B.C. and became chief conductor of the London Philharmonic Orchestra.

Bourbon. The French National Assembly on May 16, 1950, abrogated the law of 1886 by which heads of French royal houses and their direct descendants were banished from France.

Bowley, ARTHUR LYON. This British economist was knighted 1950.

Bowra, CECIL MAURICE. This British scholar was knighted 1951.

Boysen Dam. Principal feature of irrigation works in Wyoming, U.S.A. Situated on the Big Horn river, north-central Wyoming, the dam, 220 ft. high and 1,000 ft. long, is designed to provide irrigation, generate power, and exercise flood control. Work began on it in 1946.

Bradbury, BARON. This British civil servant died May 3, 1950.

Bradford. Trams ceased running in this city of Yorks, 1950.

Bradman, Sir Donald George. His book, Farewell to Cricket, was pub. 1950.

Braid, James. This Scottish golfer died Nov. 27, 1950.

Bridie, James. This Scottish dramatist (whose real name was O. H. Mavor) died Jan. 29, 1951.

Brigadier. In 1950 the title Brigadier replaced that of Senior Controller in the W.R.A.C.

British European Airways. One of the two British state-owned and state-operated commercial airways corporations. It was formed Aug. 1, 1946, to operate all British regular air services between the U.K. and the European continent, replacing the European division of British Overseas Airways Corporation, which had taken over the post-war continental services started by Transport Command, R.A.F. In 1947, the operation of all British internal air lines was also taken over by B.E.A., but from 1948 private companies provided certain services in association with B.E.A.

For the period 1947-48 B.E.A. had an operating loss of £3,573,989; by 1949-50 this had been reduced to £1,383,594.

In 1949, B.E.A. aircraft carried 709,203 passengers, 4,829 tons of freight, 3,476 tons of mail, and covered a total mileage of 15,156,101. The strength of the corporation's fleet as at May 1, 1950, was 92 aircraft, with more than 50 replacements on order. Head office is at Keyline House, Ruislip, Middlesex.

British Road Services. General trading title of the services controlled by the road haulage executive of the British Transport Commission (*v.i.*). It had acquired by February, 1948, about 2,000 undertakings operating more than 40,000 motor vehicles, trailers, and horse-drawn vehicles. The loaded mileage operated exceeded 10,000,000 per week; the total staff was more than 66,000. For administrative purposes the U.K. is divided into nine divisions, which are themselves sub-divided into 31 districts, containing more than 300 groups. Each group is operated by a group manager, who has charge of about 200 vehicles. The head office is at 222, Marylebone Road, London, N.W.1.

British Transport Commission. Body responsible in the U.K. for the provision of public inland transport, except by air, and port facilities for passenger and goods traffic. Established as a public authority under the Transport Act, 1947, it has a full-time chairman, four full-time members, and one part-time member, first appointed by the minister of transport, 1948. The administration of the various services directed by the commission is delegated to six

public bodies: railway executive; London Transport executive; road haulage executive; road passenger executive; docks and inland waterways executive; hotels executive.

On Jan. 1, 1948, the main-line railways of Great Britain, together with their ancillary services, the smaller railway undertakings previously under the jurisdiction of the railway executive committee, the railways and road services formerly controlled by the London Passenger Transport Board, and various inland waterways specified in the Act were vested in the Transport Commission. Also under the Act, the commission acquired both privately-owned and municipally-owned omnibus, trolley-bus, tramcar, and motor-coach services. Road haulage undertakings, which in 1946 were engaged in the carriage of goods involving routes of 40 miles or upwards, and necessitating journeys beyond a 25-mile radius from the operating centre, were also taken over. Wide powers were granted to the commission to develop trade harbours in Great Britain and to maintain and improve the various services, including the building of hotels and hostels. The offices are at 55, Broadway, Westminster, London, S.W.1.

Brockway, Archibald Fenner. This British politician was returned as Labour M.P. for Eton and Slough at the general election of Feb., 1950.

Brown, William John. He failed to retain his seat at Rugby in the general election of Feb., 1950.

Bruneval. A memorial stone commemorating the combined operations raid of Feb. 27-28, 1942, when British and Canadian airborne troops destroyed the German radar station at Bruneval, was laid on the cliff edge by Gen. de Gaulle, March 30, 1947.

Buchenwald. This concentration camp near Weimar, Germany, was used by the Russian occupying forces after the Second Great War for political and other prisoners. Its closing was officially announced in Jan., 1950.

Budapest. On Jan. 1, 1950, under a new administrative plan, the suburbs were merged with the capital; this brought the pop. up to 1,600,000.

Bulgaria. On Oct. 3, 1949, Bulgaria denounced her twenty years' treaty of friendship and mutual assistance with Yugoslavia, made in 1947.

Ten members of the Communist party, including the former deputy premier, Traicho Kostov, were tried on charges of treason and espionage, Dec. 7-14, 1949. Kostov was condemned to death (hanged, Dec. 16); the others to terms of imprisonment.

The prime minister Kolarov died Jan. 22, 1950, and Vulko Chervenkov, secretary of the central

committee of the Bulgarian Communist party, was appointed to succeed him.

The Bulgarian Black Sea port of Varna changed its name to Stalin on Dec. 16, 1950, in honour of the Russian dictator's 70th birthday.

Bunche, Ralph Johnson (b. 1904). American professor and administrator. Born at Detroit, Aug. 7, 1904, the son of a Negro barber, he studied at the Univ. of California and at Harvard. At Howard Univ., Washington, D.C., he became instructor, 1928, and professor, 1938, of political science. In the Second Great War, he was in the office of strategic services and later the state dept.; and in 1946 he was appointed director of the U.N. division of trusteeship. In 1948-49 he was in Palestine, first under the U.N. mediator Count Bernadotte, then, after Bernadotte's assassination, Sept. 17, 1948, as acting mediator. Under Bunche's skilful handling, armistices were concluded between Israel and her Arab neighbours. For this work, he was in 1950 awarded the Nobel peace prize. In the same year he was appointed professor of government at Harvard.

Burma. Karen opposition to the govt. was the outcome of a desire for an autonomous Karen state; Communist opposition (which included the "white hand" anti-govt. section of the people's volunteer organization, one of the groups in the wartime anti-fascist people's freedom league) was part of the general Communist unrest in S.E. Asia. The Karens were strongly anti-Communist, but nevertheless in north and central Burma they found themselves joined by Communist rebels.

In Aug., 1948, Karen troops mutinied at Thayetmyo and Mingaladon. Driven from those towns, they seized Promé, where there was no garrison, and recaptured Thayetmyo. There were also several clashes in the delta area, near Bassein, and near Syriam, 3 m. N. of Rangoon; and on Sept. 1 the Karens seized Moulmein in Tenasserim, on Sept. 14 Schweygün, some 70 m. up the Sittang, and Kyaaukkyi, near Toungoo.

A commission to study regional autonomy was set up on Sept. 1, and fighting died down for a time, to revive towards the end of Dec., with special strength in the Irawadi

Union of Burma flag; red, with blue canton and white stars

delta and in Tenasserim. During the last week of Jan., 1949, the insurgents took Toungoo and Pyu, and entered Bassein, but were driven out again. During Feb. they captured Insein (11 m. N. of Rangoon), Yamethin, Pyinmana, Meiktila, Maymyo, Myingyan; and on March 16, after hard fighting, took Mandalay. Govt. forces retook Meiktila March 24, Mandalay April 3, Insein May 22. Yenangyaung, chief centre of the oilfields, seized by white-band troops on May 7, was recaptured by the govt. June 11. Prome and Toungoo remained in rebel hands until the following spring.

On July 19, 1949, Thakin Nu announced his intention to re-establish "peace within one year." By July, 1950, the insurgents had lost their hold on all large towns, though, driven into the hills, they still made communications unsafe. The "white-band" troops had come over to the govt.; and the Karens, promised an amnesty for all who laid down their arms, and an autonomous state in accordance with recommendations made by the regional autonomy commission, were beginning to come in in considerable numbers.

Economically, the country remained in a state of chaos. Rehabilitation of the British-owned oilfields, on which £10,000,000 (including £2,000,000 contributed by the British govt.) had been spent, was discontinued at the end of 1949, owing to the lawlessness of the oilfield area, and damage done to the installations and to the pipeline to Rangoon. In March, 1950, the govts. of Australia, Ceylon, Pakistan, and the U.K. offered a joint loan of £6,000,000 (the U.K. providing £3,750,000) to Burma, principally to finance the export of rice. The loan was accepted, and an agreement signed in Rangoon, June 28. In addition to her share of this loan, the U.K. had advanced to Burma since 1945 some £72,000,000, of which half was transformed into a gift by the treaty of 1947 giving Burma independence, and £1,000,000 had been repaid up to March, 1950.

Burroughs, EDGAR RICE. This American novelist died at his home, "Tarzana," Calif., March 19, 1950.

Burt, SIR CYRIL LOPOWICZ. In 1950 he retired from the professorship of psychology at University College, London.

Bustamante, ALEXANDER (b. 1884). Jamaican politician. Of mixed blood, he was born near Kingston, Jamaica, the son of a local planter, his original name being William Alexander Clarke. After working on a farm he went to Cuba, and then to the U.S.A., where he took the name of Bustamante. He returned to Jamaica in 1934, and set up a successful money-lending business. He entered political life in 1938, his fiery oratory and understanding of the

psychology of the coloured workers securing him a commanding position in the Labour movement. In the election of 1944, Bustamante's Jamaica Labour Party defeated the People's National party and Bustamante became prime minister and minister of communications. In 1948 he came to London to negotiate with the colonial secretary and was received by George VI. At the general election of 1949, Bustamante's party was returned to power with a reduced majority.

Butler, KATHLEEN TERESA BLAKE. British educationist. She died May 2, 1950.

Cable. In 1947 the U.K. govt. took over Cable and Wireless, Ltd., and the govts. of Australia, New Zealand, India, and S. Africa also acquired the overseas communications in their various territories.

Cadogan, SIR ALEXANDER. In 1950 he retired from the post of permanent representative of the U.K. in the United Nations. He received the O.M. 1951.

Californium. Artificial, radioactive element, symbol Cf, at. no. 98, first produced in 1950 at Berkeley, California, by bombarding curium-242 with α -particles. Half-life, about 2 hr.

Campbell, SIR RONALD IAN. British diplomatist. He was made a privy councillor, 1950, in which year he relinquished his post as ambassador to Egypt and retired from the diplomatic service.

Canada. Floods in the Fraser valley, British Columbia, May-June, 1948, caused more than £6,000,000 worth of damage, and temporarily destroyed all rail communication between Vancouver and the rest of Canada and the U.S.A. Even more damage—probably three times as much—was done by floods in S. Manitoba, April-May, 1950, when about a third of Winnipeg's pop. of 350,000 had to be evacuated, and directly communication between Winnipeg and the U.S.A. was interrupted for a fortnight.

During 1948 uranium, already being worked near the Great Bear and Great Slave lakes in the N.W. Territories, was discovered also in N. Saskatchewan; while titanium, in the production of which India had previously had a virtual monopoly, was found in quantity in Quebec prov. near Lake Allard, about 400 m. N.E. of Quebec city.

Immigrants from Great Britain during Jan., 1946–March, 1949, numbered 115,000. The pop. of Canada (including Newfoundland, *q.v.* in main text) was est. at 13,728,000 in 1950.

Canada was a party to the North Atlantic treaty (*q.v.* in N.V.), 1949; and when the U.K. devalued the £ in Sept. of that year, Canada devalued her dollar by 10 p.c., giving the £ sterling a value of 3·08 Canadian dollars.

An act of the British parliament, the British North America Act

(No. 2), 1949, gave the Canadian parliament authority to amend the constitution without reference to London except in regard to matters assigned by the British North America Act, 1867, to provincial legislatures, and other existing rights since acquired by the provincial govts.

In the general election of 1949, the Liberal party increased the seats it won from 125 to 192.

W. L. Mackenzie King, prime minister of Canada for more than 21 years, died July 22, 1950.

Cancer. Announcements were made in 1949 by research workers in the U.S.A., concerning a blood test for cancer and the presence of fungi in cancer.

Cape Flights. A U.K.–Cape record was set up by Squadron Leaders H. B. Martin and E. B. Sismore, who flew out an R.A.F. Mosquito in 21½ hours, April–May, 1947. The regular services of B.O.A.C. and South African Airways terminate at Johannesburg, with connecting services within the S. African Union. B.O.A.C. route to the Cape is *via* W. Africa and the Congo. South African Airways operates the E. coast route.

Caproni. This Italian aircraft manufacturing company was wound up in 1950.

Captain. In 1950 the title of captain replaced that of junior commander in the W.R.A.C.

Cardiff. In 1947, Cardiff castle, and the adjoining gardens of over 300 acres, were given to the city of Cardiff by the marquess of Bute; and in 1949 a Welsh national college of music and drama was opened in the castle.

Carton de Wiart, SIR ADRIAN. British soldier. His book of memoirs, *Happy Odyssey*, was pub. 1950.

Cecil of Chelwood, 1st Viscount. His autobiography, *All the Way*, was published in 1949.

Censorship. From Jan., 1951, the British board of film censors indicated universal suitability by U; more suitable for adult audiences, A; for adults only, children under 16 being excluded, X.

Centime. This coin, one-hundredth part of a franc, was abolished in France in July, 1950.

Central Provinces. This former prov. of India became a state of the republic in 1950 called Madhya Union or Madhya Pradesh: pop. (1950 est.) 20,920,000.

Certificate. A general certificate of education, as recommended by the secondary schools examination council in a 1947 report, was introduced in 1951 as the only educational certificate granted by the ministry of education, replacing the former general schools and higher schools certificates. Examinations for the certificate, held annually in May, are taken towards the end of the school career by can-

didates from all types of schools and colleges, and may be taken by those who have left school. The minimum age is 16 years on Sept. 1 of the year of examination. Papers are at three levels—ordinary, advanced, and scholarship. All subjects are optional, and papers at different levels may be taken at the same examination or in different years. The certificate indicates which subjects have been passed and at what level; an advanced level pass may be granted on performance in a scholarship subject, and an ordinary pass in an advanced subject. The examination is mainly for those seeking university entrance or scholarships, or intending to enter the professions; and universities and professional bodies state the subjects and the levels in which passes are required for entrance. All pupils leaving school also receive a comprehensive and detailed school report, based on frequent internal examinations and on school record.

Channel Swimming. Gertrude Ederle's time was not beaten by a woman until Aug. 8, 1950, when Florence Chadwick (U.S.A.) swam from Cape Gris Nez to the South Foreland in 13 hrs. 23 mins.

Twenty-four entered for a Channel swimming competition, Aug. 22, 1950; seven men and two women completed the crossing, an Egyptian Hassan Abd El Rehim setting up a new record time of 10 hrs. 50 mins.

Charles. Belgian prince-regent. On July 20, 1950, the Belgian parliament passed a bill to end the regency and authorise the return of King Leopold. Charles then resumed his old title of count of Flanders.

Charles, SIR ERNEST BRUCE. British judge. He died May 3, 1950.

Cheadle. Under the 1948 redistribution of parl. seats, Cheadle gave its name to a co. constituency.

Chetwode, PHILIP WALHOUSE CHETWODE, 1ST BARON. British soldier. He died July 6, 1950, and was succeeded by his grandson Philip (b. 1937).

Chevalier, MAURICE. French actor. His autobiography, *The Man in the Straw Hat*, was pub. 1950.

Chiang Kai-shek. Chinese statesman and soldier. Under the new constitution of China he was elected the first president, 1948, but retired 1949. At the end of 1949, the whole of China being overrun by Communist forces, the nationalist govt. withdrew to Formosa, and on March 1, 1950, Chiang Kai-shek re-assumed the titles of president of China, and c.-in-c. of nationalist forces. See China, in N.V.

Chile. In Jan., 1946, an oilfield, the first to be discovered in Chile, was found in Tierra del Fuego. Its output more than provided for the needs of the country.

A trans-Andine rly. linking Salta in N. Argentina with Antofagasta, begun in 1922, was opened in 1948.

During 1947-48 diplomatic relations were broken with most Communist countries, and strong internal measures taken against Communism.

In pursuance of the policy announced in 1939, defining Chilean Antarctica as all lands between 53° and 90° W., Chilean scientific and military bases were set up, 1947, at Greenwich I. (S. Shetlands) and in Graham Land, within the area claimed by Great Britain. British protests and offer to place the matter before the international court of justice were disregarded, and in Feb., 1948, a small British naval force was sent to the area. In Sept., 1948, Chile set up a third base within the British Falkland Is. dependencies.

The U.K., Argentina, and Chile agreed not to send warships, except for customary routine movements, S. of lat. 60° during the Antarctic summers of 1948-51.

Women's suffrage was granted in 1948. Pop. (est. 1948) 5,715,717.

China. Under a new western-style constitution adopted by the national assembly at Nanking. Dec. 25, 1946, to come into effect a year later, the first general elections in Chinese history were held Nov. 21-23, 1947, in all areas not under Communist rule. The new national assembly then elected chose Chiang Kai-shek, April 19, 1948, 'first president under the new constitution.

The civil war, meanwhile, continued, the Communists being in effective control of most of Chahar, Shansi, Honan, Hopei, and Shantung provs. The long-drawn-out efforts to integrate Kuomintang and Communist leadership finally broke down March 7, 1947. On March 19 nationalist forces entered Yenai, for eleven years the Communist "capital"; they found it abandoned. The Communists, however, were consolidating their position in Shantung, and extending their grip on Manchuria. In April, they isolated govt. forces in Peiping (Peking), and by Feb., 1948, they held virtually all Manchuria outside the large cities. During the autumn of 1948, they thrust determinedly towards Nanking. Mukden fell to them in Oct., and they completed their conquest of Manchuria during Nov.

Nationalist forces, including high ranking officers, were now deserting wholesale to the other side, taking with them their arms, most of which came from the U.S.A. Indeed, it was estimated that 80 p.c. of the arms supplied by the U.S.A. to nationalist China found their way thus to the Communists, who promised liberty to any nationalist deserter in exchange for his arms.

The U.S. govt. had continued to send military help to Chiang so long as there seemed the least

hope that he might pacify his country. But during July-Aug., 1947, Lt.-Gen. Albert C. Wedemeyer, on state dept. instructions, visited the chief cities of China. He sent home a report that was highly critical of the situation in nationalist circles, and thenceforth military aid to Chiang was steadily reduced. At the end of Nov., 1948, Mme. Chiang flew to Washington in an attempt to secure immediate further substantial aid for the nationalists, but she was unsuccessful. Total grants and credits for military supplies given by the U.S.A. to nationalist China after V.-J. Day amounted to \$2,007,700,000; in addition she had sold to the nationalist govt. for \$232,000,000 surplus U.S. military stores worth more than a thousand million dollars. Over and above this military aid, nationalist China had received \$2,263,500,000 from U.N.R.R.A. and Canada.

Suchow was abandoned to the Communists on Nov. 30, 1948, and a month later the Communist armies stood along the left bank of the Yang-tse from the sea to central China. In a new year message, Dec. 31, Chiang expressed his willingness to enter into peace negotiations on certain conditions. On Jan. 14, 1949, Mao Tse-tung (q.v. in N.V.), the Communist leader, broadcast his conditions—surrender, abolition of the 1946 constitution, punishment of "war criminals" on a list published earlier, at the head of which stood the names of Chiang and his wife, and other unpalatable terms.

End of Chiang's Presidency
Tientsin fell on Jan. 15, 1949; on Jan. 20 Chiang resigned the presidency, and retired to his birthplace Fenghua, in Chekiang. The vice-president, Gen. Li Tsung-jen, assumed office as acting president, and announced his intention of sending a peace deputation to N. China. Peiping surrendered on Jan. 22, and three days later Mao agreed to receive the nationalist delegates in that city. Wrangling as to conditions and the status of the delegation followed. At the beginning of Feb. the nationalist govt. moved to Canton. Peace negotiations began at last on April 5, but among the Communists' terms was now a demand that their armies should be allowed to cross the Yang-tse without interference. This the nationalists were still refusing to accept when April 20, last day set by Mao for a settlement, arrived, and the Communists began a mass crossing of the river next day in the neighbourhood of Wuhu. On the 23rd they occupied Nanking, abandoned by the nationalists the day before. By then possibly a million Communists were pouring across the river. Chiang flew in to Shanghai on April 28, and placed himself once more at the head of the nationalist forces. On May 3 that city was encircled, and the

nationalists withdrew from Hankow, entered by the Communists on May 16. Shanghai itself fell, after a determined defense, on May 27. Nationalist resistance now virtually collapsed, and the Communists pushed southwards, took Foochow Aug. 17, and by the end of Aug. were on the borders of Kwantung prov. At the beginning of July, Chiang established his h.q. in Formosa.

In Sept. a Chinese people's political consultative conference met in Peiping. It chose Peiping capital of Communist China, and revived the name Peking. It also drew up a programme setting out the policy and methods of gov't. of the people's republic of China, which was formally inaugurated Oct. 1 with Mao as chairman of the central gov't. and head of state.

During Sept. the provs. of Suiyuan and Ninghsia (Inner Mongolia) and Sinkiang (Chinese Turkistan) went over to the Communists. Canton, from which the nationalist gov't. went to Chungking Oct. 13, was occupied without resistance Oct. 15. Amoy and Swatow fell Oct. 17, and the Communists then moved westward, entering Chungking Nov. 30 a few hours after the nationalist gov't. had left for Chengtu, 170 m. to the N.W. From Chengtu it flew, on Dec. 8, to Taipei in Formosa. During Dec. the governors of Yunnan and Sikang went over to the Communists, and by the end of the year the whole of the Chinese mainland, except some remote parts in the west, was under Communist control.

Russia recognized Mao's gov't. Oct. 2, and her European satellites followed suit a little later. Burma, first non-Communist state to recognize it, Dec. 9, was followed by India, Pakistan, the U.K. (Jan. 5, 1950), Ceylon, Norway, Denmark, Israel, Finland, Afghanistan, Sweden, Switzerland, and the Netherlands. The U.S.A., though no longer aiding the nationalists militarily, did not recognize the Communist gov't. Chou En-lai, premier and foreign minister in Peking, sent a formal letter to the sec-gen. of the U.N. on Nov. 18, 1949, repudiating the nationalist delegation at Lake Success, and demanding that it should be deprived of its status. The U.N. general assembly, then in session, took no action, and the continued presence in the security council and other U.N. bodies of representatives of nationalist China led Russia to boycott the U.N. until Aug., 1950, when her representative on the security council returned to take his seat as the month's chairman.

During Dec. 16, 1949-Feb. 14, 1950, Mao Tse-tung was in Moscow negotiating a 30-years' treaty of friendship and alliance under which Russia agreed not later than the end of 1952 to transfer to the Chinese gov't. all rights in the

Changchun rly., and to withdraw her troops from Port Arthur and restore its installations to China; the status of Dairen was to be reconsidered when peace was concluded with Japan. Russia agreed also to grant China credits amounting to 300,000,000 U.S. dollars, one-fifth every year for five years from Jan. 1, 1950, repayment in raw materials, tea, gold, and American dollars in ten equal annual instalments to begin Dec. 31, 1954. The treaty signed by Russia with the nationalist gov't. in 1945 was declared invalid. On March 27, 1950, an agreement for joint Sino-Russian exploitation of oil and non-ferrous metals in the prov. of Sinkiang was signed.

A law passed on April 13 abolished child marriage, polygamy, and concubinage, and permitted divorce by mutual consent. Pop. (1948) 463,500,000.

See also Korea in N.V. *Consult also* China Shakes the World, J. Belden, 1950.

Chipewyan. In 1950 a band of Chipewyans, the last remaining nomadic Indians in Canada, signed a treaty with the Canadian gov't. agreeing to live in a reservation on the eastern fringe of the Rockies.

Chloromycetin. Antibiotic produced originally from a mould, *Streptomyces Venezuelae*. It was later prepared synthetically. Chloromycetin proved useful in that group of diseases caused by the Rickettsiae, organisms that lie between the viruses and bacteria: e.g. typhus, and some types of typhoid.

Christie, AGATHA. Her 50th detective novel appeared in 1950.

Chungking. Following the evacuation of Canton, Chungking was proclaimed the nationalist capital of China on Oct. 13, 1949, but the city was occupied by Communist forces on Nov. 30.

Churchill, WINSTON L. S. British statesman. He toured Europe and the U.S.A., 1945-46, receiving honours and ovations and making a series of important speeches on the international situation. At Fulton, Mo., March 4, 1946, he described the division of the world into democratic and Communist halves and first used the phrase "the iron curtain" to signify the European frontier between them; at Zürich, Sept. 19, he developed the theme of western unity, appealing to France to co-operate with Germany to form its kernel. With like-minded men of all parties, he founded the United Europe Committee, 1947, and became its chairman. In May, 1948, he presided at a congress of Europe, sponsored by movements with similar ideals, at The Hague. On March 31, 1949, at the Massachusetts Institute of Technology, he gave a wide survey of the technological and political developments in the first half of the 20th

century, with special reference to the international situation. As a member of the British delegation, he attended the first session of the consultative assembly of the council of Europe at Strasbourg, Aug., 1949. At the general election of Feb., 1950, he was again returned to parliament as member for Woodford and continued to lead the opposition.

Churchill was installed as lord warden of the Cinque Ports in Sept., 1946, and received the French médaille militaire, 1947. He had the freedom of Strasbourg conferred upon him in Aug., 1949, and was appointed deputy lieutenant for Kent, Dec., 1949. In Oct., 1948, appeared the first volume of his war memoirs, *The Gathering Storm*; later volumes, *Their Finest Hour* and *The Grand Alliance*, appeared in 1949 and 1950 respectively. His paintings were exhibited at the R.A. summer exhibitions from 1948, when he was made Hon. R.A. Extraordinary.

Cinematography. Although handicapped by lack of equipment and a shortage of men, British films achieved both popularity and prestige towards the end of the Second Great War. But this prosperity induced an extravagance in production that did not always enhance artistic merit. By the summer of 1947 losses on production were high. At the same time, owing to shortage of dollars, the British gov't. imposed a 75 p.c. import duty on foreign films in order to reduce the debt for films to the U.S.A. of close on £20 million a year. The American producers (dependent for their profits on overseas sales) were angered, and for a time stopped sending films. This removal of competition gave British producers a great opportunity that not all of them were able to take, and to ensure an adequate supply of films to distributors, the gov't., after some months, removed the import tax but limited the dispatch of dollars to \$17 million in any one year. Earnings above that sum could be used for production in the U.K., but could be converted into dollars only to the amount earned by British films in the U.S.A.

The Cinematograph Films Act, 1938, was due to expire July, 1948, and a new act, in April that year, gave the board of trade power to vary, in relation to production, the quota of British first-feature films to be shown. The initial quota set at 45 p.c. of showing time could not be met, and was reduced a few months later to 40 p.c., in 1950 to 30 p.c.

To assist producers independent of the large companies, the gov't. in Oct., 1948, constituted a co. with powers to raise £2½ million and make loans on commercial terms to distributors, who could finance producers; this co. was superseded

in April, 1949, by a corporation, with Lord Reith as chairman, set up by Act of parliament and permitted to lend another £2½ million. A "working party" that enquired into production costs reported in Nov. that the industry's most serious defect lay in inadequate planning; and recommended that its first aim should be to produce at least 2 mins. of screen-time per camera-day.

Civil List. On the marriage of Princess Elizabeth to the duke of Edinburgh, 1947, she was granted an additional sum of £25,000 a year out of the Consolidated Fund, and £10,000 a year was granted to the duke of Edinburgh. The king paid to the Consolidated Fund £100,000 saved by him from the civil list during the Second Great War, so that no additional charge on account of the marriage would be made on public funds for some years.

Clackmannanshire. Under the 1948 redistribution of parl. seats Clackmannanshire with E. Stirlingshire returned one member to parliament.

Clark, MARK WAYNE. American soldier. He was appointed chief of U.S. army field forces in 1949.

Cochran, SIR CHARLES. British theatrical manager. Awarded the legion of honour in 1950 for his services to the French theatre by presenting French plays and actors in England, he died Jan. 31, 1951.

Cockcroft, SIR JOHN DOUGLAS. This British physicist was awarded the legion of honour, 1950, in recognition of his war work and assistance to French scientists under his direction.

Collins, NORMAN R. British writer. He resigned his post of controller of television 1950.

Colonel. In 1950 the title colonel replaced that of controller in the W.R.A.C.

Colonial Development Corporation. British organization for the development of the resources and trade of colonial territories. Established by the Overseas Resources Development Act, 1948, and responsible to the colonial secretary, it was formed with a view to increasing the general productive capacity and trade of the British colonies, and for these purposes was empowered to borrow up to £110,000,000. It operates on commercial lines in close consultation with colonial govts. By Nov., 1949, it had 28 fully operational undertakings in hand, including projects as diverse as poultry farming in the Gambia, timber extraction in British Guiana, cement manufacture in Northern Rhodesia, and sealing in the South Atlantic. The offices are at 33, Dover St., London, W.1.

Columbia University. A synchro-cyclotron, constructed for the university in 1948 at Irvington,

N.Y., was formally dedicated by Gen. Eisenhower in May, 1950.

Commander. In 1950 the titles chief commander, senior commander, and junior commander in the W.R.A.C. were replaced by lieutenant-colonel, major, and captain respectively.

Commons, HOUSE OF. The new chamber was completed in 1950, the house meeting there for the first time on Oct. 26.

Communist Party of GREAT BRITAIN. In the general election of Feb., 1950, 100 Communist candidates polled only 91,815 votes between them, and failed to secure any seats.

Company Law. The Companies Act, 1947, made many amendments in the law relating to companies, and in 1948 a consolidating companies Act was passed incorporating these amendments. The following are the most important changes: minority shareholders are protected, and in particular the court may, on the petition of any member who complains he is oppressively treated, make an order for the acquisition of the shares of the minority; holding companies must, with some exceptions, present group accounts covering the company and its subsidiaries; the auditors' duties are extended and only qualified accountants may act; except in private companies, directors must be voted on individually, unless a resolution that two or more be elected is first unanimously passed; directors must retire at 70 (except in certain companies) unless the articles of the company fix some other age limit which may be either higher or lower; directors must not be paid "free of tax"; a register of directors' shareholdings must be kept; the powers of the board of trade to inspect the affairs of a company are increased, and the board may also investigate the ownership of shares or debentures.

Compton, DENIS CHARLES SCOTT (b. 1918). English cricketer. This Hendon man, who was born

May 23, 1918, and worked on the staff at Lord's, attracted notice when 18 by scoring 1,000 runs in his first season with the Middlesex team. He was picked against New Zealand in 1937, and made a century next year in his first test match against Australia. After service in India during the Second Great War, he went on the Australian tour of 1948-47, scoring a century in each innings of the Adelaide test. His book, *Testing Time for England*, tells of those matches. In 1947, showing himself one of the best stroke players ever

seen, he broke all records with an aggregate of 3,316 and a total of 18 centuries. His average was 90; the month of August alone brought 1,195 runs; and he figured in huge partnerships with W. J. Edrich. He also took 73 wickets with slow left-arm deliveries and was a speedy fieldsmen near the boundary. He was vice-captain of the test team that went to Australia 1950-51. Compton was an Arsenal footballer from the 1935-36 season. His brother Leslie (b. Sept. 12, 1912) kept wicket for Middlesex and was centre-half for Arsenal. Both Denis and Leslie Compton were in the Arsenal team which won the F.A. cup in 1950.

Compulsory Military Service. For later information see Military Service in main text and N.V.

Congo. Plans for a military base and training centre for airborne troops at Kamina, on the rly. from Elizabethville to Port Franqui, were adopted by the Belgian govt., 1948.

Coorg. State of India; pop. (1950 est.) 170,000.

Corfu, CHANNEL OF. The incident referred to in the main text as the first matter brought by the U.K. before the U.N. security council was the damaging of two British destroyers, *Saumarez* and *Voltage*, in the Corfu straits, Oct. 22, 1946. Both ships struck mines, with casualties one officer and 37 ratings killed, and two officers and 43 ratings injured. Shortly after the incident a number of German-made mines were swept up, apparently laid only a short time before. As Albania had protested against the alleged infringement of her territorial waters by British warships and had refused to cooperate in mine-sweeping in the area, the British govt. held Albania responsible for the damage and demanded compensation. On the rejection of this claim, the U.K. laid the matter before the security council, Jan. 20, 1947. A month later the council considered a resolution inculpating Albania, but the resolution was vetoed by the U.S.S.R. The dispute was then referred to the international court of justice, where the hearing opened in Feb., 1948. In the judgement given April, 1949, the court held Albania responsible for the mining of the two destroyers, but was unable to assess compensation owing to lack of information. After Dutch naval experts had examined the warships, the court on Dec. 15, 1949, awarded damages of £843,947 against Albania.

Cori, CARL FERDINAND (b. 1896). Austro-Czech-American pharmacologist and biochemist. Born at Prague (then in Austria-Hungary), Dec. 5, 1896, he was educated at Trieste and at Prague university, and became a doctor of medicine. During 1922-31 he was on the staff of the state institute for the study of malignant diseases at Buffalo, N.Y., and was asst. pro-

fessor of physiology at Buffalo, 1930-31. Thence he went to Washington university school of medicine, St. Louis, Mo., as professor of pharmacology. With his wife Gerty Theresa Radnitz (b. in Prague, Aug. 15, 1896) he specialised in research on carbohydrate metabolism, insulin, adrenalin, phosphate metabolism of muscle, radioactive isotopes, etc. For this work they were together awarded half the Nobel prize for medicine, 1947.

Cork. Co. of Eire. In 1947 the co. (excluding Cork city) was divided into four constituencies sending twelve representatives to the Dáil.

Coronation Stone. This was stolen from Westminster abbey Dec. 25, 1950.

Corrective Training. Scheme for the rehabilitation of criminals in England and Wales. Under the provisions of the Criminal Justice Act (1948), a court has the power, in respect of an offender who is by age and previous convictions eligible for such a sentence under section 21 of the Act, to pass a sentence long enough to enable him to receive such constructive training as may divert him from crime and fit him to occupy a useful place in society after release. Training of this kind is carried out at regional training prisons, and aims at providing maximum opportunities for prisoners to exercise self-determination and responsibility. There are vocational training classes and an active educational programme.

Cortisone. A hormone first isolated from the suprarenal gland in 1941, used as treatment for rheumatoid arthritis. This substance plays an important part in the adaptation of the human organism to "stress." It had long been thought that there was a relationship between that crippling and chronic form of rheumatism known as rheumatoid arthritis and failure of adaptation to "stress." It was common knowledge that rheumatoid arthritis was frequently precipitated by emotional factors, and existing arthritis aggravated by similar circumstances. In 1949 an American physician, P. S. Hench, attempted to treat a number of these patients with cortisone, with most spectacular results. Unfortunately it was found that the improvement was only temporary and of short duration. Further doses of the drug had to be given at regular intervals, with a tendency for the patient to become progressively resistant to its beneficial effect. Larger doses produced disagreeable and even dangerous side effects—namely a considerable increase in the blood pressure. Scarcity and great cost of the drug limited experiment.

A later discovery, adreno-cortico-tropic hormone (A.C.T.H.), obtained from the pituitary gland, by stimulating the production of

cortisone from the suprarenal, had a similar therapeutic effect. Use of these drugs greatly advanced knowledge of the disease mechanisms involved in rheumatoid arthritis and allied conditions.

Costa Rica. In the presidential elections of Feb., 1948, the government-sponsored candidate, R. C. Guardia, was defeated by O. Ulate, of the opposing National Union party, but Pres. Picado and the govt. annulled the election. Civil war broke out the following month, when Col. J. Figueras, who had fought in the Spanish civil war on the govt. side, led a rebel army in support of Ulate, and by March 13, when martial law was proclaimed, was in control of the town of San Isidro. Repelling govt. attempts to defeat him, he soon dominated all the southern part of the country. By April 20 he was at the gates of San Jose, the capital. The president surrendered, resigned on condition that Leon Herrera was made acting president, and left for Nicaragua with Guardia. Herrera formed a provisional govt. with Figueras as foreign minister and minister of justice and public security. Thenceforward the country was governed by a revolutionary junta, pending the drafting of a new constitution. The official army was disbanded. In Dec., 1948, the govt. protested that Nicaraguan forces had joined in a minor armed insurrection supporting the former govt. Nicaragua denied this, and the treaty of Rio de Janeiro was invoked; the council of the organization of American states, after investigation, absolved Nicaragua.

A new constituent assembly was elected in Dec., 1948, in which Ulate's National Union party had a large majority. On Jan. 19, 1949, Ulate was made president of Costa Rica. Pop. (est. 1947) 747,000.

Costello, JOHN ALOYSIUS (b. 1891). Irish lawyer and politician. Born June 20, 1891, he was educated at the Christian Brothers schools and at University Coll., Dublin. He was called to the bar in 1914, and became attorney-gen. in the Cosgrave govt. of the Irish Free State, 1926-32.

More than once he represented the Irish Free State at the League of Nations, also at Imperial conferences in London, 1926, 1929, 1930. As a member of the Fine Gael party he sat in the Dáil for co. Dublin 1933-37, and for Dublin Townships 1937-43 and again from 1944. As a result of the general elections of 1948, E. De Valera's Fianna Fáil party, though remaining the strongest, was in a minority against the other parties, which combined to form a coalition with Costello as

taoiseach (prime minister). See Eire (N.V.).

Coudenhove-Kalergi, RICHARD, COUNT. In May, 1950, he was awarded by the city of Aachen (Aix-la-Chapelle) its first "Charlemagne prize" for his pioneer work for European union.

Countryman, THE. Quarterly periodical. The founder, J. W. Robertson-Scott, retired from the editorship in 1947, being succeeded by John Cripps, a son of Sir Stafford Cripps.

County Court. The maximum number of county court judges was increased to 65 by the High Court and County Court Judges Act, 1950.

Cripps, SIR (RICHARD) STAFFORD. He resigned the post of chancellor of the exchequer on account of ill-health, Oct. 19, 1950, when he also gave up his parliamentary seat at Bristol. He was created C.H. 1951. *Consult* Life, E. Estorick, 1949.

Crystal Palace. The remaining buildings were destroyed by fire on the night of Oct. 24, 1950.

Cumberland Lodge. In 1947 this was presented by the king as a residence for the S. Katherine's Foundation, a body whose purpose is to provide a college based on Christian faith and philosophy.

Cutch. State of India. Pop. (1950 est.) 550,000.

Cuzco. This ancient city of Peru was severely damaged by an earthquake, May 21, 1950.

Cyprus. A new constitution for Cyprus had been under discussion since 1946, and a consultative assembly was set up towards the end of 1947 to make recommendations. Nothing, however, was done until in May, 1948, certain proposals were sent to the governor, Lord Winster, by the British govt.. These were rejected by Greek left-wing representatives on the assembly, which was dissolved. Meanwhile political discontent on the island was rife, the strength of anti-British movements being fomented not only by Communists but by those who wished Cyprus to be ceded to Greece. In Nov., 1948, Lord Winster, governor and c.-in-c. from 1946, announced his resignation on the grounds that efforts to secure acceptance of the constitution offered to the island had proved unavailing. He was succeeded by Sir Andrew Wright. At the municipal elections of May, 1949, approx. 60 p.c. of the electorate voted for the Nationalists and 40 p.c. for the Communists. Both parties demanded union with Greece.

The last of the 35,000 Jews detained by the British in Cyprus were released and sailed for Haifa in Feb., 1949.

The eradication of malaria from Cyprus was announced in Jan., 1950, after a three-year campaign to rid the island of the mosquito.

Czecho-Slovakia. The constituent assembly elected May 26, 1946, reflected the composition and interests of the Czecho-Slovak people. But the Communists, though not in a majority, were the strongest group, and in Feb., 1948, they staged mass demonstrations and created "action committees" which seized opposition papers and party headquarters. At the same time conflict within the coalition cabinet led to the resignation of most of the non-Communist members, many of whom took refuge abroad. Jan Masaryk, foreign minister and son of the founder of the republic, died March 10, 1948, apparently by suicide, and was succeeded by his Communist deputy Vladimir Clementis (who had been in London during the Second Great War and was himself forced to resign March 14, 1950). A new constitution on Communist lines was unanimously adopted May 9, 1948; and the constituent assembly continued the nationalisation programme by passing legislation exempting only business concerns employing 50 or fewer workers. By 1950 all but 3 p.c. of Czech industry was under state control. The name of Zlin, which owed its importance to the great shoe industry founded by Bata, was in Nov., 1948, changed to Gottwaldov; the Bata works became the Swit (dawn) factories.

At elections for a national assembly held on May 30, 1948, joint electoral lists gave little opportunity for expression of opposition except by leaving ballot papers blank—a step taken by 10.8 p.c. of voters. President Benes, embittered by the death of Masaryk, and by his having been forced in 1947, under Moscow pressure, to withdraw his country's adherence to the Marshall plan, announced his resignation June 7, 1948, two days before he was due to sign the new constitution. Already ailing, he died the following Sept. 3. The Communist prime minister Klement Gottwald was chosen, June 14, to succeed him, and appointed the Communist Antonin Zapotocky as premier.

On Oct. 25, 1948, forced labour camps for dissidents were instituted. From Feb. 1, 1949, trial by jury was abolished, and a new legal system under state control was introduced. A campaign to break the resistance of the churches led to the arrest during Sept. and Oct., 1949, of many clergy of all denominations. The R.C. primate, Archbishop Beran, and other high dignitaries were made virtual prisoners in their homes; and March 16, 1950, when the last papal official, the nuncio's secretary, was expelled, brought a complete breach with the Vatican. Only those clergy were allowed to continue in their offices who took an oath of allegiance to the govt. Hundreds of clergy and laymen were brought to trial for "treason" before the new courts; many were sentenced

to death and executed, others were condemned to long terms of imprisonment. Even some Communists were not spared—they were charged with "Titoism"; and numerous officials, especially in the diplomatic and consular service where they had had contact with the West, resigned, some escaping abroad.

The regulations governing the Czecho-Slovak armed forces were brought into line with those of Russia from Oct., 1950; among changes was one which made it the duty of the rank and file to report inefficiency in their officers.

Of the 35,000 Jews remaining in Czecho-Slovakia after the war, 23,000 had by Oct., 1949, gone to Israel, or put their names down to do so. Attempts to persuade some of the skilled citizens of German descent expelled 1945-46 to return were unsuccessful.

Dáil Éireann. In 1947 the number of deputies was increased to 147.

Dale, Sir Henry H. British physiologist. Having been president of the Royal Society, 1940-45, and director of the Royal Institution labs. 1942-46, he was elected president of the British Council in 1950.

Dalhousie, Earl of. The 15th earl died May 3, 1950, and was succeeded by his brother Simon (b. 1914).

Dalton, Edward Hugh John Neale. British politician. When the Labour cabinet was re-formed after the general election of Feb., 1950, he became minister of town and country planning. The duties of this office were enlarged, and the title changed to minister of local govt. and planning, in Jan., 1951.

Damodar. Late in 1948 the Indian parliament passed an act to promote the development of the Damodar valley for irrigation, hydro-electric power, etc. The project was to be administered by the central Indian govt. in conjunction with the govts. of the states of Bihar and W. Bengal.

Damrosch, Walter Johannes. Damrosch died Dec. 22, 1950.

Darre, Richard Walther. German politician. He was released by the U.S. occupation authorities in Germany, Aug. 16, 1950, on grounds of good behaviour.

Davis, Joe. British billiards player. He equalled Lindrum's snooker break of 141 on Jan. 1, 1949; the record was broken, Feb. 3, 1950, by George Chenier who made a break of 144.

Deakin, Arthur. He was made a C.H., 1949.

Deeping, George Warwick. This British novelist died at Weybridge, April 30, 1950, in which year his novel *Old Mischief* was published.

Deir Yasin. Former Arab village of Palestine. It lies near the Tel Aviv-Jerusalem road, a few m.

W. of Jerusalem. During the night of April 9-10, 1948, it was seized by Irgun and Stern Gang terrorists. Bodies of 254 Arabs (including 145 women and girls) were found; over 100 other villagers were missing. Hagana dissociated itself from this atrocity.

Delhi. State (formerly prov.) of India. Pop. (1950 est.) 1,510,000.

Denman, Lady. This British organizer was created G.C.B., 1951.

Derby Stakes. The winner of the 1950 Derby was Galcadar, owned by Marcel Boussac.

De Valois, Ninette. Her ballet, *Don Quixote*, was produced at Covent Garden by the Sadler's Wells company in 1950. She was created D.B.E. 1951.

Development Councils. Name introduced by the Industrial Organization and Development Act, 1947, for bodies authorised by that Act, to be set up for individual industries, with functions similar to those of joint advisory councils, but with extended powers covering research, design, etc.

Devonshire, Earl and Duke of. The 10th duke died at Compton Place, Eastbourne, Nov. 26, 1950. His younger son, Andrew Robert Buxton Cavendish (b. 1920) succeeded as 11th duke, the elder having been killed in action, 1944.

Dietrich, Otto. German politician. He was released by the U.S. occupation authorities in Germany, Aug. 16, 1950, on grounds of good behaviour.

Disease, Notification of. Leprosy was made a notifiable disease in the U.K. in 1949.

Displaced Person. Responsibility for about 85,000 displaced persons still in W. Germany passed to the *Länder* govts., June 30, 1950. The I.R.O. was kept in being until March, 1951, to care for about 113,000 persons waiting to go abroad.

Divorce. An order-in-council decreed that no proceedings under the Matrimonial Causes (War Marriages) Act, 1944, could be taken in respect of a marriage celebrated after June 1, 1950.

Jurisdiction. The Matrimonial Causes Act, 1950, gave the court in England jurisdiction in proceedings by a wife for divorce or nullity, even though husband and wife are not domiciled in England, if the wife has resided in England for three years and the husband is not domiciled in any other part of the United Kingdom, in the Channel Islands, or the Isle of Man. A similar rule applies in Scotland for wives resident there for three years.

Donegal, Co. of Eire. In 1947 the co. was divided into two constituencies, sending seven representatives to the Dáil.

Douglas, Lewis Williams. U.S. diplomat. In 1950 he resigned the ambassadorship to the U.K.

Dramamine. Drug used to relieve motion sickness (sea-sickness, etc.). It is related to the so-called anti-histamine drugs, and its effectiveness in motion sickness was noticed by chance. A certain patient under treatment at the Johns Hopkins allergy clinic, U.S.A., for hay fever with dramamine, who was highly susceptible to car-sickness, found this latter condition relieved in addition to his hay fever. Dramamine was used with complete success by 1,374 men in a U.S. army transport on an 11-day crossing of the Atlantic in Nov., 1948, and became a recognized specific for seasickness.

Drury Lane Theatre. The musical play *Oklahoma* ended its run here in May, 1950.

Dublin. City of Eire. In 1947 the city was divided into six parl. constituencies, returning 24 members to the Dáil.

Duhamel, GEORGES. French author. His autobiography, *Light on My Days*, English trans. B. Collins, was pub. 1948.

Dulanty, JOHN WHELAN. Irish diplomatist. His title of high commissioner in London was changed to that of ambassador, July 26, 1950. He retired in Sept.

Dumbarton. Under the 1948 redistribution of parl. seats, this burgh became part of the co. constituency of W. Dumbartonshire.

Dunster. The historic castle here was sold to the commissioners of crown lands in 1950.

Durban. See Africa in N.V.

Efficiency Medal (Territorial). Medal awarded to warrant officers, n.c.o.s, and men of the Territorial and auxiliary military forces of the British Commonwealth. Instituted Aug. 23, 1930, it replaced the Territorial Efficiency Medal. The Efficiency Medal (Territorial) is granted for 12 years' efficient service, provided 12 annual camps have been attended. Cadet service is credited for the award, while service in W. Africa and during war-time counts as double.

Oval in shape, the medal is of silver, and carries on the obverse the royal effigy and on the reverse the inscription "For efficient service." A subsidiary title on the mount denotes whether it is awarded for service in the Territorial army or in one of the other auxiliary military services. Clasps are granted for each additional completed six years of service. The ribbon is green with narrow yellow edges, but recipients whose service was in the H.A.C. wear the special ribbon described under Territorial Efficiency Decoration in main text.

Einaudi, LUIGI (b. 1874). Italian economist, second president of the Italian republic. Born in Piedmont, he became professor of science and finance in Turin university, and was for many years

economic editor of the *Corriere della Sera* and editor of *Riforma Sociale*, 1900-35, achieving a reputation as an economist far beyond his own country. He became a Liberal member of the senate in 1919. Opposing the war against Abyssinia in 1935, he was exiled by the fascists, whose economic theories he had also criticised. Until the end of fascism in Italy he resided in Switzerland. Returning 1944, he was appointed governor of the bank of Italy, and became a member of the constituent assembly, and in 1947 vice-premier and minister of finance. On the retirement through ill-health of Enrico de Nicola, first president, Einaudi was elected to fill his place, and took office May 12, 1948.

Eire. An application by Eire to join the United Nations was vetoed by the U.S.S.R. in Aug. 1947. Trade and financial talks with the U.K. were held in London, Nov., 1947, and a four-year trade agreement was signed in London, June, 1948. In general elections held in Feb., 1948, after a redistribution of seats in 1947, the govt. party, Fianna Fáil, remained the strongest party, with 68 seats, but it was in a minority of 11 as compared with the combination of all other parties. As De Valera, its leader, had already stated that he would not enter any coalition, representatives of other parties agreed to combine in a coalition under J. A. Costello, of the Fine Gael party, next strongest with 31 seats. Costello took over the premiership Feb. 18. His ministry included representatives of Labour and of Clann na Poblachta (New Republicans). The most notable measure proposed by the new govt. was the repeal of the External Relations Act of 1936 in order to sever the last remaining links with the British crown and the British Commonwealth.

After discussions with the premiers of the Commonwealth, in London for the Commonwealth conference of Oct., 1948, of the problems arising from such a step, which appeared to reduce all citizens of Eire in the U.K. and the Commonwealth, and British or Commonwealth citizens in Eire, to the status of aliens, the measure was duly brought forward in the Dáil as the Republic of Ireland bill; but this was accompanied by a declaration that in view of the historical associations of the countries concerned a new distinction would be made in favour of U.K. and Commonwealth citizens in Eire so that they should lose no existing privileges, provided that reciprocal gestures were made towards citizens of Eire in the U.K. and Commonwealth countries. The British govt. gave the required assurances, as did other Commonwealth countries, and general good will was expressed on all

sides with hopes for a more real friendship than before between the U.K. and Eire. Yet the position was not accepted in the U.K. without misgiving, first, as to the possible effect of such a precedent upon other countries of the Commonwealth which might at some time wish to break with the British crown; and secondly, as to the reaction upon other nations of a step that gave a non-Commonwealth nation the favour of special treatment on no stronger basis than that of long historical association. The govt. of Northern Ireland, too, had misgivings, and sought assurance from the British govt. that its independence from Eire would not be affected.

The Republic of Ireland Act was duly passed by the Dáil, Dec. 21, 1948, and came into operation at midnight, April 17-18, 1949.

Pop. (1946) 2,955,107.

Eisenhower, DWIGHT DAVID. In Dec., 1950, this U.S. soldier was appointed by the N. Atlantic council supreme Allied commander in Europe. He took up his duties in the following month.

Elbing. The Polish name of this town of Masuria, Poland (formerly in E. Prussia) is Elbląg.

Elizabeth. This princess of Great Britain gave birth to a daughter, Anne Elizabeth Alice Louise, Aug. 15, 1950.

Eritrea. The U.N. assembly political committee on the future of Eritrea recommended, Nov. 25, 1950, that the country should become a federal unit under the crown of Abyssinia (Ethiopia).

Europa. This former German liner made her first voyage, after refitting, as the *Liberté* in Aug., 1950, sailing from Havre to New York via Southampton.

Europe. The most striking fact during the years immediately following the end of fighting in Europe was the increasingly rigid division of the Continent into two—a western part composed of France, the Low Countries, Scandinavia, and Italy, with the U.K., and an eastern part of countries within the Russian orbit, Poland, Rumania, Hungary, Bulgaria, and Czechoslovakia. Yugoslavia, at first a leading member of the second group, was expelled from the Cominform (q.v. in main text) in 1948 because Marshal Tito refused to follow Russian orders in the post-war reconstruction of his country. Greece, after five years of civil war, succeeded in retaining her contact with the west. Spain remained in isolation apart from both groups.

In one after another country of eastern Europe, a minority Communist party, backed by Russian pressure, seized power and forced on its fellow citizens one-party, secret-police govt. and communist economic development. In the west also, but by way of

discussion and agreement, there was a growing tendency towards economic and, to some extent, political integration.

The first step in this direction by the west was taken during the war, when in 1944 the exiled govts. of Belgium, the Netherlands, and Luxembourg reached agreement for an eventual customs union of their three countries. This agreement was fully supported by the new govts. formed at home after the expulsion of the Germans (though differences in internal economic conditions caused its implementation to be deferred), and in international affairs the Benelux countries, as they came to be called, frequently spoke and acted together.

The Treaty of Dunkirk

A 50-year treaty of alliance between the U.K. and France was signed at Dunkirk, March 4, 1947; a 50-year treaty of mutual assistance and economic cooperation between the U.K., France, and the Benelux countries, signed at Brussels March 17, 1948, brought into being Western Union, with a permanent consultative council composed of the foreign ministers of the participating countries (to meet at least every three months), a permanent commission of diplomatic representatives (to meet at least once a month), and a permanent military committee to keep defence problems under review.

A committee appointed by the consultative council of Western Union studied proposals by both unofficial and official bodies supporting European unity, and as a result of its report the consultative council announced, Jan. 28, 1949, that a council of Europe was to be created. Invitations to take part in setting it up were extended by the Brussels treaty powers to Denmark, Eire, Italy, Norway, and Sweden, and representatives of these ten countries meeting in London, March 28-May 5, 1949, drew up a statute setting forth the aims and objects of the council of Europe, which was to consist of a committee with executive authority formed by one minister from each participating country, and an advisory consultative assembly of appointed representatives. The council came into existence Aug. 3, and met for the first time at Strasbourg, Aug. 10. Greece, Turkey, and Iceland, invited Aug. 8 by the committee of ministers to join the council, accepted, though Iceland, for constitutional reasons, could not do so in time to be represented at the first meeting. Paul-Henri Spaak, of Belgium, was elected chairman. Sir Gilbert (later Lord) Campion, clerk of the British house of commons 1937-48, was clerk of the assembly. Spaak, in adjourning the meeting on Sept. 9, said, "I came here with the conviction that a united states of Europe is necessary. I leave with the certainty that a united states of Europe is possible."

Recommendations by the assembly that W. Germany and the Saar should be invited to become associate members of the council were endorsed by the committee of ministers, and both sent delegates to the second meeting of the assembly which opened in Strasbourg Aug. 7, 1950, in the newly constructed House of Europe. Perhaps the most important subject on the agenda of this meeting was the so-called Schuman plan (*see* Schuman, Robert in main text) for the integration of European coal and steel industries and alternative proposals with a similar aim put forward by the British Conservative party.

Added impetus was given to Europe's tendency towards economic integration by the European Recovery Programme (*v.i.*); but that same programme stressed the differences between E. and W., for Russia refused to take part in the discussions which preceded its inauguration in April, 1948, or to allow any of her satellites to do so, though Poland and, in particular, Czecho-Slovakia, with her then still strong western links, would have liked to be included. Russian hostility to W. European integration, however, hastened rather than delayed the development of the E.R.P.

Full U.S. and Canadian support for W. Europe was given with the signing in Washington of the North Atlantic Treaty (*q.v.* in N.V.), April 4, 1949.

The merging of the British, American, and French zones of Germany into one, and the subsequent creation in the "trizone," in May, 1949, of the federal republic of Germany (intended to be the major part of an ultimate federal republic of all Germany) had a stabilising effect on the politics and economy of W. Germany, but intensified the division of the country into two, Russia setting up in her zone (a fourth part of the whole country) a "German Democratic Republic," ostensibly of all Germany, in Oct., 1949.

European Recovery Programme. Programme to restore economic stability to post-war Europe with the help of financial aid from the U.S.A. The possibility of such aid, depending on a workable plan of European self-help, first broached tentatively by Dean Acheson, was outlined by George Marshall, U.S. secretary of state, in an unofficial speech at Harvard university on June 5, 1947. It could, he suggested, be part of the general U.S. policy directed against "hunger, poverty, desperation, and chaos." But the initiative, he insisted to a press conference a week later, must come from Europe, through joint action by, preferably, all countries west of Asia, including the U.K. and Russia.

The British foreign minister Ernest Bevin gave an immediate welcome to the "Marshall plan,"

and announced that he was visiting France to discuss with her ways of following up the American proposal. The Benelux countries went to Paris; next day a joint Anglo-French statement proposed a meeting of the French, British, and Russian foreign ministers during the week beginning June 23. Molotov came to Paris, and consultations began on June 27, but broke down on July 2, Molotov refusing to agree to the setting up of a special organization to work out a recovery programme for submission to the U.S.A. on the ground that such an organization would infringe national sovereignties.

The U.K. and France decided to go on without Russian collaboration, and on July 3 issued invitations to 22 European countries (omitting only Germany, from which however the commanders-in-chief of the four zones were invited, Spain, and Russia) to attend a conference in Paris on July 12. Refusals came from Albania, Bulgaria, Czecho-Slovakia (after an earlier acceptance), Finland, Hungary, Poland, Rumania, and Yugoslavia. Representatives of Austria, Belgium, Denmark, Eire, France, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Sweden, Switzerland, Turkey, and the U.K., and of the three western occupying powers in Germany, met and set up a committee of economic cooperation. By Sept. this committee had drawn up for submission to the U.S. secretary of state a detailed statement, which it called the European Recovery Programme, showing the assets and needs of the participating countries for the subsequent four years.

Passing of the Foreign Assistance Act

On Dec. 19, 1947, President Truman sent a message to congress recommending the E.R.P. and asking for \$17,000,000,000, to be paid out during April 1, 1948 - June 30, 1952. After exhaustive discussion, congress passed the Foreign Assistance Act on April 2, 1948. It included provision for \$5,300,000,000 (later reduced to \$4,000,000,000 by the Foreign Aid Appropriation Act of June 14) to be spent on European recovery during the first twelve months of the plan. The economic cooperation administration, with Paul G. Hoffman as administrator, was set up to administer Marshall aid.

At a second conference in Paris, March-April, 1948, the Marshall aid countries set up, April 16, a permanent representative body, the organization for European economic cooperation. Bilateral agreements were made between the U.S.A. and each of the 16 cooperating countries, and on Oct. 16 the O.E.E.C. presented to Averell Harriman, the E.C.A.'s special representative in Europe, the recovery plan for the first year of the programme. It envisaged in the participating countries greatly increased production in agriculture and industry,

increased trade among themselves, limitation of imports paid for in dollars to goods necessary to recovery, increase in exports to dollar countries. France, the U.K., and Eire each subsequently published an economic plan covering the four years of prospective Marshall aid.

The U.K. and the Scandinavian countries, France, Italy, and the Benelux countries canvassed possibilities of closer economic association in their respective groups; and general, if somewhat limited, relaxations of exchange and other controls were made between the Marshall aid countries. During the first three months of 1950 European purchases in the U.S.A. dropped by 40 p.c. compared with the same period in 1949, and it seemed possible that by 1952 Europe would be solvent without special U.S. aid, provided there were no unforeseen adverse happenings.

An act providing funds for E.R.P. up to June 30, 1950, was passed by congress Feb. 7, 1949; another providing funds up to June 30, 1951, was passed May 25, 1950, after determined opposition.

Representatives of the W. German Federal Republic were admitted to the O.E.E.C. Oct., 1949.

Purchases authorised by the E.C.A. during April 3, 1948-March 31, 1950, were:

	\$
U.K.	2,391,400,000
France	1,838,800,000
Italy	974,500,000
Western Germany	840,400,000
Netherlands	808,900,000
Belgium	
Luxemburg	472,200,000
Austria	404,900,000
Greece	301,400,000
Denmark	189,100,000
Norway	172,400,000
Eire	117,700,000
Sweden	84,400,000
Turkey	82,500,000
Trieste	23,900,000
Portugal	13,100,000
Iceland	10,900,000

\$5,590,265,000 were spent in the U.S.A.; \$1,084,100,000 in Canada; \$620,700,000 in Latin America; \$386,300,000 in O.E.E.C. countries; \$404,000,000 in other countries.

In Dec., 1950, the trading position of the U.K. had improved to a point at which she was able to suspend acceptance of Marshall aid from Jan. 1, 1951. Total allotment made to her to that date was \$2,694,300,000.

Exchange. While the Bretton Woods agreement provided various controls and aids, including those afforded by the International Monetary Fund, it permitted changes in basic rates under given conditions; and in Sept., 1949, the U.K. reduced the official rate of exchange of the £ sterling to 2·80 U.S. dollars, a devaluation that was followed by many other countries.

Eyre. This lake of S. Australia was filled with water in 1950 for the first time since its discovery

by E. J. Eyre, owing to the fall of unusually heavy rains for several successive years.

Faulkner, WILLIAM. American novelist. He was awarded the 1949 Nobel prize for literature.

Festival of Britain. In April, 1946, a committee set up by the British govt. to consider trade fairs and exhibitions proposed the holding of an international exhibition in 1951 to commemorate the Great Exhibition of 1851. The govt. decided that this was financially impossible; but agreed to a suggestion by Sir S. Cripps that the centenary should be marked by a cultural festival, demonstrating British achievements in science, industry, and the arts. A council was constituted in March, 1948, with Lord Ismay as chairman and Gerald Barry as director-general, to promote the Festival of Britain, to open in May, 1951.

A London site of 27 acres on the South Bank of the Thames was chosen as the chief centre, but the festival was to be celebrated also in industrial cities and ports, and was to incorporate the annual festivals at Edinburgh, Malvern, Stratford-on-Avon, Canterbury, and Bath, the eisteddfodau of Wales, and other annual events in town and country, as well as special festivals at Bournemouth, Liverpool, Norwich, and York. Two travelling exhibitions, one by land, the other by sea, were also planned.

Work on the South Bank site, entailing the demolition of existing buildings and the construction of a new river embankment, began in 1949. One permanent structure was built: the Royal Festival Hall. The largest non-permanent building was the "dome of discovery," an aluminium structure 365 ft. in diam., to house exhibits relating to British exploration. Other temporary buildings were put up to house scientific and industrial exhibits as well as 14 restaurants and cafés. A Bailey footbridge was thrown across the Thames to ease traffic over the permanent bridges. Thirty acres of Battersea Park were converted into pleasure gardens and a fun fair.

Finland. By the peace treaty signed in Paris, Feb. 10, 1947, Finland ceded to the U.S.S.R. the prov. of Petsamo; granted to the U.S.S.R. a 50-year lease of territory to the S.W. of Helsinki for a Russian naval base, together with free communications thereto; had her armed forces restricted to 34,400 army, 4,500 navy (total tonnage 10,000 tons), and 3,000 air force (60 machines, no bombers); and agreed to pay to the U.S.S.R. reparations in kind to the value of \$300 million in 8 years.

In March, 1948, at the suggestion of Stalin, the Finnish govt. agreed, with reservations, to discuss a mutual assistance pact with the U.S.S.R. During the subsequent

negotiations due notice was taken of Finland's view that military assistance from the U.S.S.R. should be given only after talks between the two countries, rather than automatically and that Finnish defence forces should be used only for the protection of Finnish territory. Moreover, Finland insisted on freedom of action in foreign policy. According to Pres. Paasikivi there was no suggestion at any time of dictation in the matter by the U.S.S.R. This pact was ratified at the end of May, and the ratification was followed by a halving of the \$150 million reparations then due to the U.S.S.R.

As a result of elections held in July, 1948, the Agrarian and Social Democratic parties gained in strength at the expense of the Communist-dominated Popular Democratic League. The Social Democrats formed a new minority govt.

Fitzwilliam, EARL. Eric Spencer (b. Dec. 4, 1883) became 9th earl on the death of his first cousin once removed May 13, 1948.

Flag COLOUR PLATE. The new Canadian flag was not adopted.

Flower, SIR (WALTER) NEWMAN. British publisher. His book of reminiscences, *Just As It Happened*, appeared in 1950.

Football. In Oct., 1950, Sunderland paid a record fee of £30,000 for the transfer of Trevor Ford from Aston Villa.

Forbes-Robertson, SIR J. His wife, (May) Gertrude Elliott, died Dec. 24, 1950.

Formosa OR TAIWAN. At the end of 1949, when the Chinese mainland was almost entirely in the hands of the communists, Chiang Kai-shek and his govt. retired to Formosa, and Taipei became the "capital" of the nationalist govt. Following the outbreak of hostilities in Korea (q.v. in N.V.), President Truman declared, June 27, 1950, that the occupation of Formosa by communist forces would be a direct threat to the security of the Pacific area. Under a so-called "policy of neutralisation" the U.S. Seventh Fleet was to prevent any attack on the island, while the Chinese nationalists were to cease air and sea operations against the mainland. The President further stated that "the determination of the future status of Formosa must await the restoration of security in the Pacific, a peace settlement with Japan, or consideration by the United Nations."

Foundling Hospital. In 1951 the Thomas Coram Schools, Berkhamsted (formerly the London Foundling Hospital) became a mixed county modern secondary school for 500 pupils. Of the old pupils 160 remained as boarders; the rest—some 200—were placed with foster parents to attend local primary schools until they reached a suitable age to return to their

old school, the name of which was changed to Ashlyns.

Franc. The centime, 100 of which formerly went to one French franc, was abolished in 1950, and the franc was made the sole unit of currency.

France. Bidault's govt., defeated June 24, 1950, was succeeded by a short-lived ministry under H. Queuille, and then, July 12, by a coalition govt. headed by René Pleven. This continued in office in spite of strong opposition to its demands for funds to finance rearmament for defence made necessary by France's obligations under the North Atlantic Treaty (*q.v.* in N.V.).

Francium. Radio-active element, symbol Fr, at. no. 87, formerly called virginium in America. One isotope, mass no. 224, is in the thorium series; another, mass no. 223 (actinium K) is in the actinium series. Both have a half-life of 21 min.

François-Poncet, ANDRÉ. French diplomat. His book *The Fateful Years: Memoirs of a French Ambassador in Berlin 1931-38*, was pub. in an English trans., 1949.

Franks, SIR OLIVER SHEWELL (b. 1905). British philosopher and diplomatist. Born Feb. 6, 1905, and

educated at Bristol grammar school and Queen's Coll., Oxford, he was fellow and prelector in philosophy at Queen's 1927-37, becoming university lecturer from 1935. In the

latter year he was also visiting professor for three months in Chicago university. From 1937 to 1945 he was professor of moral philosophy at Glasgow university; and in 1946 became provost of Queen's Coll., Oxford. Joining the civil service in the Second Great War, he became permanent sec. of the ministries of Supply and Aircraft Production. He was knighted 1946. In 1947 he headed the British delegation in the Marshall plan talks in Paris, later visiting Washington to discuss the European report with the U.S. govt. and others. In 1948 he was appointed British ambassador to the U.S.A.

Fraser, PETER. This New Zealand statesman died Dec. 12, 1950.

Fry, CHARLES BURGESS. In May, 1950, he resigned from the training-ship *Mercury*, of which he had been honorary resident director since 1908.

Fuchs Case. British espionage trial. Born in 1911 at Rüsselsheim, near Frankfurt-on-Main, Germany, the son of a pacifist clergyman, Karl Emil Julius Fuchs was educated at Leipzig and Kiel universities, and joined the German

Communist party in 1932. In 1933 he came to England as a refugee from Nazi persecution, and continued his scientific studies at Bristol and Edinburgh. After a period of internment, 1940-42, in view of his high reputation as a physicist he was given work in connexion with atomic research. Although he became a naturalised British subject in 1942, he informed the govt. of the U.S.S.R. of the nature of his work. He went to the U.S.A. with a British atomic mission in 1943, and while in that country made several contacts with Russian agents. Returning to Great Britain in 1946, he was sent to Harwell, where he became head of the theoretical division of the atomic energy establishment and maintained contact with Russian agents for some time.

In the autumn of 1949 information reached the British authorities from the U.S.A. that there had been some leakage of information while the British mission had been there. Suspicion was finally narrowed down to Fuchs, who was arrested Feb. 3, 1950, and charged under the Official Secrets Act, 1911, with having communicated information that might be useful to an enemy—namely, atomic secrets. In written and oral statements he admitted that he had been in contact with persons unknown to him who passed on to the Russian government information he himself had supplied. He had accepted reluctantly only one token payment of £100, and his sole explanation of his conduct was that he had had complete confidence in Russian policy and had believed that Russia would build a new world. Since the end of the Second Great War he had revised his opinion of Russian policy and of Communism, and had had misgivings as to the course he had been pursuing. Pleading guilty at his trial, March 1, 1950, he was sentenced to 14 years' imprisonment.

Gaiety Theatre. This was remodelled by Lupino Lane in 1950 for about £180,000, cost of repairs (est. at £100,000) proving prohibitive. The govt. of India proposed to build offices on the site.

Gasperi, ALCEIDE DE (b. 1881). Italian statesman. A native of Trent, which he represented in the Austrian parliament, 1919, he became leader of the Italian Christian Democratic party and sat in the Italian parl. until imprisoned, 1926-30, for anti-fascist activities. After the Second Great War, in which he was active in the underground movement, he became minister without portfolio, 1944, then moved to the foreign office. Prime minister from 1946, he formed his seventh administration in Jan., 1950. On a visit to the U.S.A., Jan. 1947, he obtained great economic concessions and successfully enlisted American sympathy and assistance in his struggle with Communism. *See also* Italy in N.V.

Geiger Counter OR **GEIGER-MÜLLER COUNTER.** Instrument for detecting radio-activity and counting atomic particles. A thin wire as anode is surrounded by a metal cylinder as cathode; these are sealed in an airtight enclosure filled with argon (or krypton), at about 5 cm. Hg. The anode is connected through an amplifier to a pulse recorder. A single atomic particle entering the space between wire and cylinder ionises the gas, and the flow of electrons to the cathode produces a pulse. If 1 cm. Hg. of alcohol vapour (or methane) is added, the pulse is rapidly quenched. By varying the H.T. voltage across the electrodes different forms of discharge are obtained and different kinds of particles can be identified. *See* Radio-activity, in main text.

General Medical Council. By the Medical Act, 1950, the council's functions as a disciplinary body were transferred to a medical disciplinary committee, with power to hear evidence on oath and to compel the attendance of witnesses. An appeal lies to the judicial committee of the privy council.

General Service Medal. In 1949 this medal was awarded for the action on the Yang-tse-kiang involving H.M.S. *Amethyst* (*q.v.* in N.V.).

Genetics. At the Soviet Academy of Agricultural Science conference, July-Aug., 1948, a violent attack on Russian scientists who adhered to the Darwinian and Mendelian theory of heredity was launched by Prof. T. D. Lysenko, who claimed to have proved the Lamarckian theory of the inheritance of acquired characteristics by experiments in budding and grafting, and accused his opponents of holding "reactionary" and "bourgeois" ideas. The academy upheld Lysenko's version of I. Y. Michurin's theory, and a number of eminent Russian scientists were removed from their posts by the academy of sciences, which also sent a letter to Stalin apologising for its "mistakes." The "Lysenko controversy" spread to the non-Communist world, where the majority of biologists opposed his beliefs and supported the dismissed Russian professors. *Consult* Soviet Genetics and World Science, J. Huxley, 1949.

Geneva. Canton of Switzerland. Pop. (1950) 197,265.

Geneva Convention. Four International Red Cross conventions were adopted at Geneva, Aug. 12, 1949. One of these, concerned with protection of civilians in war-time, was entirely new and marked a fresh step in international law. This called for the designation in peace-time of "security zones" for wounded, children, mothers, and aged persons; during actual fighting there should be "neutral zones" for sick and wounded as well as for

non-combatants; rules were laid down for the treatment of the inhabitants of occupied countries. The other three conventions, concerned with treatment of prisoners of war, care of wounded soldiers and sailors, and maritime warfare, were amendments of existing conventions. Although few representatives signed for their govts. without some reservation, the total number of signatories on the protection of civilians was 60, and on the remaining three conventions, 61.

Geoy Tepe. Locality of N. Persia near L. Urmia. A series of objects varying from the Al Ubaid period to the 2nd millennium B.C., excavated here, was presented to the Ashmolean Museum, Oxford, in 1949. This was the first collection of objects ever made in this region by extensive scientific excavation.

Germany. The division of the country into two—a large western part under the control of the three western powers, the U.K., the U.S.A., and France, and a much smaller eastern part under Russian control—became more marked after 1946.

The coordination of W. Germany began with the setting up of a German bizonal economic council at Frankfurt-on-Main by the British and U.S. occupation authorities in June, 1947. The powers of this council were extended by a new charter in Feb., 1948; and from Nov. 1 it took over the trade of the French-administered *Länder*. At its head was Hermann Pünder, once secretary of state of the Reich chancellery. Its first concern was the improvement of the bad food conditions prevailing as a result of a severe winter 1946-47, currency disorder and inflation, the black market, and the stream of refugees and expelled persons from the E.; but it and the *Länder* govts. also strove successfully for a general increase in industrial and agricultural production.

Drastic currency reform, strictly controlled in the west and more or less sham in the east, was imposed from June 21, 1948. More than 90 p.c. of the Reichsmarks in circulation were cancelled, and a new *deutsche Mark* was created. Thereafter consumer goods reappeared and industrial production rose rapidly from about 40 p.c. of the 1936 level to 78 p.c. by the end of 1948, 99 p.c. by mid-1950. Building, necessitated by the heavy destruction of the war and the increased population, was an important item in this development. The participation of W. Germany and W. Berlin in the European Recovery Programme (*q.v.* in N.V.) was a main factor in recovery.

Steady, though at first slow, progress towards the unification and economic reintegration of the three western zones culminated with the drafting of a new constitution for a federal republic of Germany by a provisional assembly

meeting at Bonn. This constitution was approved by the tripartite military govt. in the west, May 12, 1949, and the republic was proclaimed May 23. Federal elections for the lower house (Bundestag), held Aug. 14, gave the Christian Democratic Union 139 seats, the Social Democratic party 131, the (Liberal) Free Democratic party 52, the Bavarian party (regionalists) 17, the German party (right wing) 17, and the Communists 15. The C.D.U., F.D.P., and German party formed a coalition, and on Sept. 12 Theodor Heuss, leader of the F.D.P., was elected president. On Sept. 15 Konrad Adenauer, leader of the C.D.U., was elected chancellor, and formed a cabinet of 14 with nine C.D.U. members, three F.D.P., and two German party. Kurt Schumacher, leader of the Socialists and unsuccessful candidate for the presidency, led the opposition.

The federal govt. had limited powers, the govts. of the *Länder* retaining considerable autonomy in *e.g.* finance, taxation, education, police. A federal council (Bundesrat), composed of representatives of the *Länder* appointed by their govts., served as an upper house. Bonn was selected as capital of the new republic. Allied military govt. ended Sept. 21, and was replaced by a civilian Allied high commission. In 1950, W. Germany was allowed to resume limited diplomatic relations abroad. Proposals made later in the year by the U.S.A. that Germany should be asked to provide troops for integration into a W. European army were not welcomed by Adenauer, who in this had the support of a large number of his fellow countrymen.

Meanwhile, the conflict within the Allied control council had culminated in a desertion of the council by the Russians, March 20, 1948. Henceforth they administered their zone without consultation with their Allies, and the area assumed increasingly the pattern of other Soviet satellite countries. The Socialist Unity party—a combination of a Communist minority and a much more numerous Socialist party brought about in 1946—came to power. A "people's council" meeting in E. Berlin adopted May 30, 1949, a draft constitution, and on Oct. 7, 1949, a "German Democratic republic" was proclaimed in E. Berlin. The "people's council" declared itself a "provisional people's chamber," and elected the Communist Wilhelm Pieck as president, the Socialist Unity party leader Otto Grotewohl as premier, and Walther Ulbricht, Moscow-trained Communist leader, as vice-premier. Ulbricht, backed by a heavily armed "people's police," soon assumed virtually dictatorial powers. The E. German govt. signed an agreement with Poland July 6, 1950, confirmed Nov. 28, accepting the Oder-Neisse line as the E. German frontier.

Chiefly as a result of a continuing stream of refugees from the E., unemployment in W. Germany rose to more than two million during the winter of 1949-50, falling to 1.4 million by July 1, 1950, by which time German exports had increased from the 1948 average of 150 million deutsche marks to 550 million. *See also* in main text Air Lift; Saar Basin.

Gezira. Region of Anglo-Egyptian Sudan. After June 30, 1950, the Gezira irrigation scheme was administered by a board responsible to the govt.

Giauque, WILLIAM FRANCIS (b. 1895). American chemist. Born at Niagara Falls, Ont., Canada, May 12 1895, and educated at California university, he was appointed instructor in chemistry there, 1927, professor, 1934. Awarded the Chandler medal of Columbia university, 1936, for the invention and first application of the adiabatic demagnetization method of producing temperatures below 1° absolute, he was awarded the Elliott Cresson medal of the Franklin institute the following year. With H. L. Johnson, he discovered oxygen isotopes 17 and 18 by means of the absorption of sunlight in the earth's atmosphere. He was awarded the Nobel prize for chemistry, 1949, for studies in the behaviour of matter in temperatures close to absolute zero.

Gide, A. P. G. This French writer died in Paris, Feb. 19, 1951.

Gironde. Dept. of France. The worst of the fires which devastated 399,000 acres of the forests of the Landes in Aug., 1949, occurred in the Gironde dept., where 84 firefighters were killed.

Giuliano, SALVATORE (1923-50). Sicilian bandit. Born at Montelepre near Palermo in 1923, he was in 1943 a clerk in Palermo, and also a black market dealer in rationed foods. Caught carrying a sack of flour by carabinieri, he shot one of them dead, and escaped, an outlaw. Round him he gathered a band of other lawless men, among whom and in the countryside he posed as a champion of the liberation of Sicily. By 1950, he and his band had killed some 150 persons, including 102 policemen, and wounded many more. Put on trial at Viterbo in his absence, he was charged with 105 murders and more than 200 crimes of kidnapping, extortion, and blackmail.

In 1949, a new commander of the local carabinieri, Colonel Luca from Piedmont, was appointed. He replaced the Sicilians in his force by men from north Italy, then succeeded in persuading Giuliano's lesser followers to return to lawful life, captured 25 of the more important, and eventually surprised Giuliano and five companions in a house at Castelvetrano, some 30 m. from Montelepre, his usual centre of operations. Giuliano was shot dead July 5, 1950, in trying to make his escape.

Glyndebourne. There were no opera seasons here during 1947-49, but the theatre was reopened in 1950, when the first post-war Mozart festival was given.

Goddard, RAYNER GODDARD, BARON (b. 1877). British judge. Educated at Marlborough and at

Trinity Coll., Oxford, he became a K.C. in 1923. He was recorder of Poole from 1917 to 1925, then of Bath until 1928, then of Plymouth until 1932, when he was appointed

a high court judge in the king's bench div. In 1938 he was made lord justice of appeal and in 1944 a lord of appeal in ordinary, becoming lord chief justice of England in 1946. In 1948, when proposals for the experimental suspension of capital punishment for five years, having passed the house of commons, were being discussed by the lords, Goddard advanced forcible arguments for its retention, and his speech had probably a direct effect on the final vote which rejected the proposals.

Gold. The transmutation of mercury into gold was accomplished in 1949. See Alchemy, in N.V.

Gold Coast. After the end of the Second Great War increasing efforts were made to give the Africans of the Gold Coast a greater share in the government of the colony. A constitution, inaugurated March, 1946, set up a new legislative council, which was the first legislature of a tropical African colony to have an elected African majority.

But serious riots broke out in Accra, Feb.-March, 1948, involving loss of life, and these had to be quelled by force. A commission of inquiry reported *inter alia* widespread dissatisfaction with the 1946 constitution because it left so much power in the hands of the chiefs "whose star was on the wane." Educated Africans could see no prospect of political power under the new constitution.

A new committee on constitutional reform, consisting entirely of Africans under the chairmanship of Judge Coussey, was set up in Jan., 1949. Its report, published in the following Oct., dealt with local and regional administration as well as central govt., and laid stress on keeping and bringing up to date the institution of the chieftaincy. Most of its recommendations were accepted by the British govt. The franchise was extended in Dec. to men and women over 21 with a residence qualification, on payment of an annual tax of 4s. A new constitution proclaimed Dec. 30, 1950, provided for a central legislature of 84 (75 Africans, 9 Europeans), and a cabinet responsible to it of 11 (8 Africans, 3 Europeans).

Elections held in Feb., 1951, for which some 40 p.c. of eligible persons had registered, gave 34 seats to the Convention People's party, which aimed at independence within the Commonwealth in the shortest possible time, and had support from some dozen other members.

Goodwood. The war-time Goodwood airfield (adjoining the horse-race track) was made into a motor racing track by the duke of Richmond. Racing began 1948.

Gottwald, KLEMENT (b. 1896). Czecho-Slovak president. Born an Austrian at Desice, S. Moravia,

Nov. 23, 1896, he worked first as a joiner. He served in the First Great War, joined the Communist party, 1922, and became its sec-gen., 1929. During the German occupation he

escaped to Moscow, returning in 1945 to become vice-premier in Fierlinger's govt. When in the 1946 election the left-wing bloc secured a majority, Gottwald became premier of a left-wing coalition govt.

He opposed the Marshall plan, and enforced the nationalisation of all enterprises with more than 50 employees, and of the agrarian estates. After the Communist coup of Feb., 1948 (see Czecho-Slovakia, in N.V.), a new constitution was drawn up under Communist pressure, and elections in May on joint electoral lists eliminated the opposition. Benes's reluctance to sign the new constitution led him to resign, and the new assembly unanimously chose Gottwald to succeed Benes as president.

The town of Zlin in Czecho-Slovakia was renamed Gottwaldov in 1948.

Gould, SIR FRANCIS CARUTHERS. His eldest son Alec, mentioned in the same entry, died Sept. 5, 1948.

Graziani, RODOLFO. Italian soldier. On May 1, 1950, he was sentenced in Rome to 19 years' imprisonment for collaboration with the Germans. Reduction of the sentence by the time already spent in custody and under various amnesties led to his release Aug. 28, 1950.

Greece. From mid-1946, the conflict between the govt. (right wing and moderate) and the Communist E.A.M. (Ethnikon Apeleutherikon Metapon, national liberation front) developed into open war, fostered by assistance to the rebels from Greece's Russian satellite neighbours Albania, Yugoslavia, and Bulgaria. Greece brought a complaint against these neighbours before the U.N. security council in Dec., and a U.N. per-

manent commission, appointed in Oct., 1947, to watch the situation in the Balkans, confirmed the truth of the Greek charges.

In Aug., 1947, "General Markos" (Markos Vafiades), leader of the rebels, proclaimed Greece a republic with himself at its head; in Dec. he announced the setting up of a "provisional govt." The rebel forces, when forced to withdraw, took with them children and other civilians from the towns and villages they had captured and abandoned; these children, estimated to number 28,000, were dispersed among the Soviet satellite countries, and all efforts by the U.N. to secure their return to Greece proved vain. The Greek economy meanwhile continued to deteriorate.

Yugoslav support of the rebels grew steadily less active after Yugoslavia's expulsion from the Cominform in July, 1948. During July and Aug. the Greek army successfully attacked in the Grammos mts., bordering Albania; another successful campaign in the Vitsi mts. in W. Macedonia followed. Isolated guerilla attacks in Thessaly and the Peloponnese were also countered. Fighting died down in Oct., but was active again during the winter. More than 4,000 rebels, attacking Florina (W. Macedonia) in Feb., 1949, were decisively beaten and driven off. The Peloponnese was cleared by March. April brought renewed attacks from Albania in the Grammos mts.; the rebels were defeated with heavy losses. In a battle fought in the Vitsi area on Aug. 16, 1949, 1,931 rebels were killed or captured, the remainder, some 5,000, leaving behind supplies and equipment when they escaped to Albania or Yugoslavia. By the end of Aug. govt. troops were in control of the Grammos area, and the civil war appeared to be at an end. During June, 1946-March, 1949, rebel losses were estimated at 70,000 killed, surrendered, or captured; govt. losses were 37,934 killed, wounded, or missing. Martial law was lifted in the south of Greece on Dec. 24, 1949, elsewhere on Feb. 8, 1950. The last British troops, some 600, left Greece on Feb. 5, 1950. See also European Recovery Programme in N.V.

Greenwich Observatory. The solar and chronometer depts. and the nautical almanac office were installed at Herstmonceux by 1950; the move was to be completed in 1953.

Greenwood, ARTHUR. British politician. He resigned office in Sept., 1947.

Ground Nut Scheme. Scheme launched in 1946 by the British govt. In May, 1946, the U.N. food and agriculture organization recommended that, to help meet a shortage of oils and fats, more oil-seed crops should be grown. Later that year the United Africa Co. (a

subsidiary of Unilever, one of the largest companies in the world making margarine and soaps) suggested to the British govt. that large-scale production of ground nuts would be possible in British East Africa.

A mission headed by A. J. Wakefield, formerly director of agriculture in Tanganyika, was sent to E. Africa by the secretary for the colonies, and reported very favourably on the suitability of certain districts in Kenya, Tanganyika, and N. Rhodesia for large-scale, mechanised production of ground nuts. The govt.'s intention to embark on the scheme was announced by John Strachey, minister of food, Nov. 25, 1946, and the United Africa Co. was appointed agent to manage its initial stage.

A white paper issued Feb. 5, 1947, recommended a five-year development plan for 107 areas of 30,000 acres each—80 in Tanganyika, 17 in N. Rhodesia, 10 in Kenya. It was est. that by 1950-51 the ground nut harvest would be 600,000 tons—enough to supply about a third of the additional fats required by the U.K. to meet all her needs. The cost over six years was est. at £24,000,000, including £4,750,000 for agricultural machinery, £1,250,000 for a new rly. and port. Cost of ground nuts was expected to be just over £14 a ton (compared with the then current market price of £32).

Work began in Tanganyika at the beginning of Feb., 1947. Plans for a new deep water port, Mtwara, in S. Tanganyika on Mikindani bay, and a rly. connecting it with a development area around Nachingwea, at a cost of £4,000,000, were accepted by the British govt. in April, 1947. During 1947, 7,000 acres in all were cleared and planted. On March 1, 1948, the overseas food corporation, set up by the Overseas Resources Development Act, Feb. 10, 1948, and responsible to the ministry of food, took over the management of the E. Africa ground nuts scheme.

The corporation's first annual report, issued Nov. 1, 1949, covered the period March 1, 1948, to March 31, 1949. Liabilities incurred amounted already to £23,200,000 (including £9,000,000 by the U.A. Co. during its 16 months of management). There had been development in three areas—Kongwa, Urambo, Nachingwea. Conditions at Kongwa had proved adverse—rainfall was low (about 20 ins. a year) and unreliable, the bush was difficult to clear (the machinery used, designed for American conditions, was not robust enough for African), and the soil was highly abrasive. Rainfall at Urambo was rather better, and the soil appeared to be more fertile. Development at Nachingwea had been on a small, experimental scale only. Cost of clearing the bush had been nearly £40 an acre (instead of an est. £3 17s. 4d.). At Kongwa, 25,105

acres were planted with ground nuts, 19,429 acres with sunflower (a "breaking in" and rotation crop), 1,733 acres with maize; at Urambo, 487 acres with ground nuts, 2,052 acres with sunflower, 250 acres with maize. Severe drought limited the crop for 1947-48 to 2,150 tons of unshelled ground nuts (528 lb. of unshelled nuts per acre instead of an est. 850 lb. of shelled nuts), 800 tons of sunflower seed.

The year 1949 was again excessively dry. On Nov. 19 the minister of food announced that Wakefield and J. N. Rosa, another member of the mission which had reported favourably on the scheme at its inception, had been dismissed from membership of the overseas food corporation; the chairman, Sir Leslie Plummer, resigned in June, 1950.

During 1949-50, 83,000 acres of a total of 90,000 acres cleared, were planted. Harvests gathered up to the end of June, 1950, were: Kongwa 320 lb. of unshelled nuts per acre, from 3,100 acres, 90 lb. of sunflower seed an acre from 32,100 acres, 700 lb. of maize per acre from 1,900 acres, 780 lb. of sorghum per acre from 520 acres; Urambo, 810 lb. of unshelled nuts an acre from 2,700 acres, 140 lb. of sunflower seed per acre from 7,950 acres, 700 lb. of maize an acre from 870 acres; Nachingwea, 800 lb. of unshelled nuts per acre from 250 acres; 400 lb. of sunflower seed per acre from 150 acres. Total tonnage: 1,500 tons of unshelled ground nuts, 1,800 tons of sunflower seed, 850 tons of maize, 180 tons of sorghum. Development continued, but as part of govt. long-term plans for developing backward areas rather than with any idea of increasing rapidly the world's supply of edible oils. Legislation to transfer direction of the new plans to the colonial office, and to write off £36,500,000 spent by the overseas food corporation on the original scheme to the end of March, 1951, proposed in a white paper (Cmd. 8125), Jan. 9, 1951, was introduced a month later. See Tanganyika map in main text.

Guadeloupe. This, with its dependencies, became a department of France, Jan. 1, 1947.

Guided Missile. Self-propelled explosive missile guided to its target by means of a gyroscopic or radio-controlling unit. Such weapons were introduced by the Germans in the Second Great War, the most notable being the flying bomb, the rocket bomb, and the glider bomb. Neither the flying nor the rocket bomb was an accurate weapon; glider bombs could be launched and guided only from aircraft flying at a comparatively low altitude.

After the Second Great War, theoretical and practical investigation made by the U.S.A. and others showed that a guided rocket could be made to strike only within

15 m. of the point aimed at from a range of 200 m.; at a range of 2,000 miles, the error might be between 150 and 200 m. Moreover, enemy jamming of the wavelength of the radio frequencies guiding the missile to its target could throw it still farther off course. Work was therefore concentrated on developing short-range, radio-controlled missiles for use against raiding bombers.

The most efficient of these, operated on the ram-jet principle, could be either shot out of a gun on the ground or in defending aircraft, or driven by rockets. Once the ram-jet came into operation the missile travelled at bullet speed and had an effective range of 30 m. The nose of the missile had a radio proximity fuse which detonated the explosive charge when it came within destructive range of the target.

The British A.A. Fairey guided missile could be accurately radio-controlled on to a target up to 4 m. distant. The U.S. Bat, with a radar nose, had a similar range; it was first tested at Wendover, Utah, in 1947.

Another type of guided missile, the homing torpedo, consisted of an ordinary torpedo with, in its nose, an acoustic device which, picking up the echo from a ship, actuated the torpedo's steering mechanism and guided it to the target; it exploded on impact. Short-range guided rockets fitted with radio-proximity fuses were developed for saturation bombardment of armour in land warfare. See Rocket Propulsion and Weapons (main text).

Gustavus V. King of Sweden. He died at Drottningholm Palace, Stockholm, Oct. 29, 1950, and his elder son (b.1882) succeeded as Gustavus VI.

Gwynn, STEPHEN LUCIUS. Irish author. He died in Dublin, June 11, 1950.

Gwynne, HOWELL ARTHUR. British journalist. He died June 26, 1950.

Haifa. The Arab-Jewish tension following the setting up of the state of Israel (q.v. in N.V.) led to a suspension of the transmission of oil through the pipe line from Iraq and by tanker through the Suez Canal. The Haifa refinery, after being closed for two years, was reopened Aug. 28, 1950, to refine oil from the western hemisphere.

Hailsham, DOUGLAS MCGAREL Hogg, 1st Viscount. He died at his home at Hailsham, Sussex, Aug. 16, 1950, and was succeeded by his son Quintin Hogg, M.P. for Oxford 1938-50.

Ham (Surrey). Ham House, with its collection of 17th cent. furniture, was opened to the public in 1950; it had been given to the National Trust in 1948 and leased to the ministry of works, the contents being under the super-

vision of the Victoria and Albert museum.

Hamburg. The first census after the war, October 29, 1946, showed a pop. figure of 1,406,158. Statistics of July, 1947, gave 42 p.c. of all Hamburg's buildings as destroyed or severely damaged; the remaining number of dwellings, mostly flats, as 286,000, representing 53 p.c. of the pre-war number. Yet the pop. at the end of 1948 was est. at nearly 2,000,000, as in 1939. Plans to increase the capacity of the port to handle cargoes from 9,600,000 tons a year to 15,000,000 tons (pre-war figure was 26,000,000 tons) were announced in 1950.

Hamilton, (A. W.) PATRICK. British dramatist. His Autobiography was pub. 1948.

Hammer, THROWING THE. A world's record throw of 195 ft. 5½ in. was made by I. Nemeth (Hungary), 1949.

Harbin. With the rest of Manchuria, Harbin was again in Communist control by the end of 1948.

Harmer, SIR SIDNEY FREDERIC. This British scientist died Oct. 22, 1950.

Harriman, WILLIAM AVERELL. American diplomat. In 1950 President Truman appointed Harriman his special assistant on foreign policy.

Harwood, SIR HENRY. British sailor. He died June 9, 1950.

Hawaii. A bill to grant statehood to Hawaii was passed by the U.S. house of representatives in March, 1950.

Health, MINISTRY OF. Responsibility for housing was transferred to the ministry of local govt. and planning (formerly town and country planning) Jan., 1951.

Health Service. See National Health Service in N.V.

Heart, DISEASES OF. During 1948-49 six out of nine selected cases of mitral stenosis were successfully treated at Guy's hospital, London, by valvulotomy, an operation within the heart.

Helpmann, ROBERT. Australian dancer, choreographer, and actor. During the 1948 festival at Stratford-on-Avon he played Shylock, King John, and Hamlet. He was choreographer and premier danseur of the film *The Red Shoes* (1948). In 1949 and 1950 he visited the U.S.A. and Canada with the Sadler's Wells ballet, of which he ceased to be a regular member Nov., 1950.

Hess, WALTER RUDOLF (b. 1881). Swiss physiologist. Born at Frauenfeld, Switzerland, March 17, 1881, and educated in Switzerland and Germany, he specialised in diseases of the eye and brain, and from 1917 was director of the physiological institute of Zürich university. President of the international congress of physiology in

1938, he was in 1949 joint winner, with A. E. Moniz, of the Nobel prize for physiology and medicine.

Heuss, THEODOR (b. 1884). First president of the federal republic of W. Germany. Born at

Brackenheim, Württemberg, Jan. 31, 1884, he studied in Munich and Strasbourg, becoming a disciple of the reformer Naumann, who entrusted Heuss with the

editorship of *Die Hilfe*, 1905. In 1912 he took over the *Heilbronn daily Neckarzeitung*. After the First Great War he sat in the Reichstag as a democrat, and became director and lecturer at Berlin political academy. A scathing analysis of the Nazi ideology, *Hitler's Way*, 1932, provoked the immediate dismissal of Heuss when Hitler took power. In retirement he wrote biographies of Naumann (1937) and Liebig. Occupying troops in 1945 found Heuss in a Heidelberg attic and made him Württemberg's minister of education. The next year he became professor of history and politics at Stuttgart technical university and Liberal leader in the regional diet. At the Bonn assembly he took a decisive part in creating the federal constitution; and was elected president of the new federal Germany, Sept. 12, 1949, by the federal convention (composed of the 402 members of the *Bundestag* and 402 members from the *Länder*) by 416 votes out of 760. *Pron. Hoyes.*

Hichens, ROBERT S. British novelist. He died at Zürich, July 20, 1950.

Himachal Union. Pop. (1950 est.) 1,080,000.

Hiroshima. This Japanese city, consisting by the end of 1950 of shoddy, dirty, one-storey wooden huts, had by then become a busy centre of tourists seeking atomic bomb souvenirs.

Hiss Case. Perjury trial in the U.S.A. It arose out of evidence given by Whittaker Chambers, an ex-Communist, before the U.S. house of representatives committee on un-American activities. On Aug. 3, 1948, he stated that, when he was a member of the Communist party, 1924-38, among a Communist underground group in Washington with whom he kept in touch was Alger Hiss, one of Franklin Roosevelt's New Deal young men, who in 1936 entered the state dept., was one of the advisers accompanying Roosevelt to Yalta, was sec.-gen. of the U.S. delegation to the San Francisco conference, and in 1946-48 was director of the Carnegie endowment for international peace.

Giving evidence next day, Hiss swore that he had never been a Communist, and denied all know-

ledge of Chambers. On Aug. 25, however, brought face to face with him in a New York hotel, Hiss recognized him as "George Crossley," a free-lance journalist he had met some dozen times during 1934-36. In a broadcast Chambers repeated his accusations and, at the urgent persuasion of his friends, Hiss started an action for slander, claiming 75,000 dollars damages.

Hiss's lawyers asked Chambers if he had any documentary proof of his assertions. He produced, Nov. 17, a number of typewritten documents which, he said, came from the state dept. and had been given to him by Hiss. The house committee on un-American activities thereupon subpoenaed Chambers, directing him to produce these and any other material he might have, and on Dec. 2 he handed in five micro-films containing 200 photographs of what purported to be govt. documents. These, he said, he had kept in a hollowed-out pumpkin at his Maryland farm. The documents bore dates during Jan.-April, 1938, and some were said to be in Hiss's handwriting.

On Dec. 6, before a federal grand jury investigating alleged Communist spying, Chambers declared that during 1934-38 he had regularly collected confidential documents from Hiss and other unconfessed Communists in the state dept., had had micro-films made of them, returned the documents, and passed the films to Col. Bykov, a Russian agent. Hiss and his wife were called to give evidence before the grand jury, which ordered his arrest, Dec. 15, on a charge of perjury. (Under the U.S. Statute of Limitations, he could not be charged with espionage since the charges related to acts alleged to have been committed more than three years earlier.)

The case came on before the New York federal district court on May 31, 1949, and continued until July 8, when the jury, after 29 hours' deliberation, announced that they could not agree; eight were for conviction, four for acquittal. The judge discharged them, and ordered a retrial. The second trial began on Nov. 17, and continued until Jan. 21, 1950, when the jury, after 24 hours' consideration, returned a verdict of guilty. Hiss was condemned to five years' imprisonment and, pending an appeal, released on 10,000 dollars' bail. He was disbarred as an attorney in New York state, May 2.

The U.S. circuit court of appeal confirmed Hiss's conviction, Dec. 7, 1950; and rejected his appeal for a rehearing Jan. 4, 1951. On Jan. 27 he appealed to the supreme court, on the grounds that the circuit court had made four errors.

No jury would have believed Chambers unsupported by other evidence—he confessed in court to being a liar, a former Communist spy, and a perjurer; but Hiss's

lawyers were not able to produce a convincing explanation of certain of the documents, some typed on a typewriter that had at one time belonged to Hiss, others allegedly in Hiss's own handwriting.

Consult A Generation on Trial: U.S.A. v. Alger Hiss, A. Cooke, 1950; *Seeds of Treason*, R. de Toledano & V. Lasky, 1950.

Hittites. At Karatepe in the foothills of the Taurus Mts. in Turkey, near the Jeyhan river, archaeological excavations brought to light in 1947 walls covered with bilingual inscriptions (Phoenician and Hittite), believed to be identical in sense. It was hoped that from these experts would at last be able to decipher Hittite hieroglyphs and thereby greatly increase knowledge of the history of Asia Minor in the period from the 15th to the 6th century B.C.

Hogg, Quintin. British philanthropist. His grandson, also Quintin Hogg, mentioned in the same entry, succeeded his father as the 2nd Viscount Hailsham in 1950.

Holy Island. Govt. approval to proposals to establish an anti-tank gun range some 2½ m. from Holy Island was given in 1948, in spite of opposition by the bishop of Newcastle and others.

Hong Kong. Pop. (est. 1950) 2,250,000.

Hoover Dam. This, the original name of the great dam across the Colorado river, U.S.A., also called Boulder Dam (*q.v.* in main text), was officially restored in 1947.

Hungary. A general election in Aug., 1947, produced a national assembly of 100 Communists (27.5 p.c. of the seats, with but 22 p.c. of the votes), 68 Smallholders, 67 Social Democrats, 36 National Peasants, who formed a govt. bloc of 271 against an opposition of 60 Popular Democrats, 49 Hungarian Independents, 18 Independent Democrats, and 13 others. Lajos Dinnyes, chosen prime minister after Nagy's self-imposed exile, re-formed his cabinet to include as vice-premiers the Communist Matyas Rakosi and the Social Democrat Arpad Szakasits. Many ex-ministers were imprisoned; others fled the country, and several Hungarian diplomats left the service and took refuge abroad.

The Allied control commission withdrew in Sept., 1947, but certain Russian forces remained "to safeguard communications." In Feb., 1948, a Hungarian delegation headed by the president, Zoltan Tildy, visited Moscow, Dinnyes signing a twenty-year pact of friendship and alliance with Russia on the 18th. Subsequently Hungary fell into line with Kremlin policy, e.g. in closing the Danube to the west, in refusing Marshall aid, and in supporting the Cominform and ostracising Marshal Tito. In home politics, the Socialist party was split, its left wing merg-

ing with the Communists in June, 1948, to form the Workers' party. The Smallholders were also split between members ready to cooperate completely with the Communists, and others who objected to subservience to Moscow. Gradually the whole economic system came under state ownership or state direction. From Feb., 1948, all business enterprises employing more than 100 were nationalised, from Dec., 1949, all those employing more than ten. These measures were carried out by decree without reference to the national assembly.

Tildy was made to resign the presidency, July 30, 1948, following the arrest of his son-in-law for alleged acts of treason. He was succeeded by Szakasits, who had been a chief mover in the merging of his party with the Communists. Dinnyes resigned the premiership, Dec. 9, and was followed by another Smallholder, Istvan Dobi.

The R.C. church had always had great political power in Hungary, for the king had been accustomed to consult the primate on all important occasions; the church also possessed the traditional loyalty of the peasantry. One of the aims of the republic was to reduce its power. Under the land reform of 1945, the church, formerly the largest single land-owner in Hungary with 1,128,000 acres, lost more than a million acres. A law of June 16, 1948, nationalised and secularised all schools. The Protestant denominations accepted terms from the govt., and secured the return of their secondary schools; the R.C. church would not negotiate unless its property were returned. Numerous clergy were arrested in Dec., 1948, on charges of espionage, conspiring with foreign enemies, etc.; and a world sensation was caused by the arrest of the primate himself, Cardinal Mindszenty, on Dec. 27. At his trial, Feb. 3-8, 1949, he was found guilty, on his own "confession," of treason, espionage, and currency offences, and was condemned to life imprisonment.

Elections held on a single list, May 15, 1949, produced a completely subservient national assembly which adopted, Aug. 18, a new constitution based on that of Russia. The office of president of the republic was abolished, Szakasits becoming chairman of the presidium. Vice-premier Rakosi, secretary general of the Workers' party, became virtual dictator of Hungary. Purges that followed inside the Workers' party suggested its unity was not complete, and the increasing tension between Tito and the Cominform led to accusations of Titoism against suspected dissidents. The Communist minister of the interior, Laszlo Rajk, was executed Oct. 15, after a sensational trial with seven others; all eight confessed to the charges made against them of spying and conspiracy. Similar trials followed, as

well as trials of alleged saboteurs, most of whom were accused of opposing the collectivisation of agriculture that followed the post-war breaking up of large estates. In May, 1950, Szakasits was made to resign, and was replaced by another former Social Democrat, Sandor Rnai.

Besides her treaty with Russia, Hungary made treaties of mutual assistance during 1948 with Rumania and Bulgaria. She entered into trade agreements with Czechoslovakia, 1945, Poland and Sweden, 1946, Austria and Russia, 1947, and the U.K., 1948. Her relations with the west deteriorated, however, and negotiations for a renewal of the trade agreement with the U.K. were suspended in Dec., 1949, in consequence of the arrest of Edgar Sanders, a British subject, on charges of spying. With Robert A. Vogeler, a U.S. citizen, and Imre Geiger, a Hungarian, all three employees of an American co. operating in Hungary, he was brought to trial Feb. 17, 1950. All three made the customary plea of guilty; Sanders was condemned to 13 years', Vogeler to 15 years' imprisonment; Geiger was condemned to death, and executed May 10. No member of the British or American diplomatic service was allowed to establish contact with Sanders or Vogeler before, during, or after trial.

Hyderabad. State of India. Pop. (1950 est.) 17,690,000.

Hydroponics. The system of growing plants with their roots continuously immersed in a liquid culture medium was first developed by N. F. Gericke in California. It has not proved equally successful in Great Britain, or even in the eastern states of the U.S. This is believed to be chiefly due to the much lower intensity of sunlight available. Two other systems of soilless culture have been tried out in England, with considerable success. In one the plants are grown in sand and the nutrient solution is supplied by surface watering or automatic drip-feed. In sub-irrigation culture, the plants are grown in gravel or crushed clinker in waterproof tanks, into which the nutrient solution is pumped from time to time and then allowed to run off. Tomatoes, carnations, orchids, and other high-value crops have been produced commercially by sand culture, and the sub-irrigation system is used by the R.A.F. to provide fresh vegetables at desert stations.

Illinium. The name of this chemical element was officially changed in 1949 to promethium.

Illustrated London News. The Bruce Ingram received a knighthood in 1950, the year in which he celebrated his fiftieth year as editor.

India. The pop. of the republic was estimated in 1950 to be 347,340,000.

Indonesia. The federal govt. of the U.S.I. and the govt. of the republic of Indonesia signed in Jakarta an agreement providing for the formation of a unitary (instead of a federal) state, May 19, 1950. The new state, with ten provs., was proclaimed on Aug. 15.

Ingram, REX. Irish-American film director. He died July 21, 1950.

Inman, PHILIP ALBERT INMAN, BARON. This British administrator resigned the chairmanship of the hotels executive of British Rlys. Jan., 1951.

Inönü, ISMET. Turkish statesman. His People's party, which had been in power in Turkey continuously since 1923, was heavily defeated in the general election of May, 1950, by the Democratic party. Inönü himself was defeated at Ankara but returned at Malatya, and led the opposition in the new parliament. He was succeeded as president of Turkey by Celal Bayar (q.v. in N.V.).

International Trade Organization. Body first proposed by the Economic and Social Council of the U.N. in 1948, with the object of expanding world trade by removing trade barriers. A preparatory committee was appointed, and early in 1947 a drafting sub-committee met in New York to draw up a world trade charter. The preparatory committee discussed its proposals in Geneva and London, and the charter was signed at Havana, March 28, 1948, by 53 states, but ratification was delayed owing to increasing international tension. Tariff negotiations were conducted from time to time. But at the beginning of 1951 both the U.S.A. and the U.K. decided not to ratify the charter.

Iran. In 1949 the name Persia was officially resumed by the Iranian govt. in dealing with foreign countries.

Irian. Name given by Indonesia to New Guinea.

Isaacs, G. A. This British politician became minister of pensions Jan., 1951.

Israel. Independent republic of Western Asia. It came into existence at 4 p.m. on May 14, 1948, eight hours before the expiry of the British mandate for Palestine, when David Ben-Gurion (q.v. in N.V.), in a broadcast from Tel Aviv, proclaimed an independent Jewish state, Israel, with himself as prime minister and minister of defence. The first act of his provisional govt. was to declare the state open to all Jews. Chaim Weizmann, a former president of the world Zionist organization, accepted an invitation to be provisional president. *De facto* recognition was accorded to Israel by the U.S.A. on the same day, by Russia on May 17. The U.K. did not recognize the new state (whose boundaries were still unsettled)

until Jan. 30, 1949. By the end of 1950 Israel had also been recognized *de facto* by all countries of the British Commonwealth except Pakistan and Ceylon; by all the countries of Europe except Spain, Portugal, and Greece; by most countries of Central and S. America; and by Persia. She was accepted as a member of the U.N., May 11, 1949, at her third application.

The Israeli parliament (knesset) decided June 13, 1950, against the adoption of a written constitution. From Sept. of the same year, nearly all the land of Israel was placed under national ownership.

Fighting which occurred in June, 1948, between Hagana, reconstituted the regular Israeli defence force, and the terrorist body Irgun (see Palestine in main text) led the provisional govt. on June 24 to outlaw all armed bodies except Hagana. Irgun thereupon announced that it did not recognize the provisional govt., but on Sept. 2 expressed willingness to disband. On Sept. 17, Count Folke Bernadotte, (q.v. in main text), U.N. mediator in Palestine, was assassinated in Jerusalem. The Stern gang claimed responsibility for this crime. Outlawry was specifically applied to it, and 200 persons suspected of membership were seized on Sept. 18. Irgun, warned that if its members did not surrender all arms and equipment they would be similarly named as outlaws, transformed itself into the Heruth (freedom) political party. Nathan Yellin, leader of the Stern gang, and his second in command Matatiah Shmulevitz, were arrested in Haifa on Sept. 30. On Feb. 10, 1949, a military court sentenced them to eight and five years' imprisonment respectively; they were released immediately under an amnesty for all prisoners not serving life sentences.

A census taken on Nov. 8, 1948, showed the pop. to be 842,000, of whom only 69,000 were non-Jewish. All persons of both sexes over 18 included in this census were eligible to vote at the general election held Jan. 25, 1949, for a constituent assembly; the Labour party, led by Ben-Gurion, gained 46 out of the 120 seats in this assembly, which met on Feb. 14 in Tel Aviv, and adopted a provisional constitution, Feb. 17. Weizmann was elected first president of the new republic. Ben-Gurion resigned, and formed a new coalition govt.

More than 130,000 immigrants entered Israel during 1948, 243,000 during 1949, and some 200,000 during 1950. They came principally from Germany, from the eastern countries of Europe, and from the Arab countries, including North Africa. Immigrants from the U.S.A., S. America, and the British Commonwealth numbered only a few thousand altogether.

National service for men (two years) and women (one year) between the ages of 18 and 26 was

introduced Sept. 8, 1949. On Sept. 19, 1949, Israel devalued the Israel pound (equivalent to the pound sterling, and introduced Aug. 17, 1948), in conformity with the pound sterling.

Tel Aviv, the temporary capital, was amalgamated with the almost deserted city of Jaffa, Oct. 4, 1949, under the name Jaffa-Tel Aviv.

The prime minister moved his office to the Jewish-held new city of Jerusalem, Dec. 14, 1949. Several other ministries followed, and parliament reassembled there Dec. 26. On Jan. 23, 1950, Jerusalem was proclaimed capital of the Jewish state.

Military action between Israel and her Arab neighbours, and diplomatic action by the U.N., are described under Palestine in N.V.

Italy. During 1947 the govt. of A. de Gasperi was confronted increasingly by strikes and other demonstrations fostered by the Communist party and the Communist-controlled trade union organization, the confederation of labour. In May, 1947, the ministry had been re-formed to exclude all Socialist and Communist representation, though the following Dec. a further rearrangement gave places to the so-called Moderate Socialists (as distinct from the Left-Wing Socialists, under Nenni, who threw in their lot with the Communists to form the popular democratic front). Disorders reached a climax in Nov. with serious rioting, directed chiefly against right-wing party offices and newspapers, in Milan, Genoa, and other cities, and notably throughout Apulia. A second wave of violence and revolt followed the attempt in July, 1948, to assassinate the Communist leader Togliatti in Rome. There was fighting in Genoa, Turin, Florence, Naples, Venice, and other centres, with loss of life and many other casualties.

Meanwhile, before the eyes of an anxious world, Communism in Italy had received a notable setback in the general elections of April, 1948. These brought a big victory for de Gasperi and his Christian Democrats, with 307 seats in the chamber against the 182 of the popular front, the other parties securing only 85 seats between them. The C.D. victory in the senate was equally marked. In Aug., 1948, the popular front was dissolved. On May 12, 1948, Luigi Einaudi (q.v. in N.V.) took the oath as second president of the republic.

De Gasperi continued in office, with various cabinet changes, throughout 1949. In Jan., 1950, he headed a new coalition govt. from which Liberals and left-wing Christian Democrats were excluded. Faced with large-scale unemployment (over 2,000,000 at the end of 1949), and with serious unrest among the peasants of southern Italy, the govt. announced in March 1950, a programme of reform

A 10-year plan for relieving unemployment in, and developing, the depressed areas of the country was laid before parliament: this included land reclamation and irrigation projects, and construction of new roads, aqueducts, and hydro-electric plants. Under a national land reform bill, more than 3,000,000 acres were to be made available to landless peasants and agricultural workers.

Italy's application for membership of the U.N. was vetoed by the U.S.S.R. in Oct., 1947. The country, which had been obliged to endure successive devaluations of the lira, participated in the European Recovery Programme. Italy was a signatory of the North Atlantic Treaty (g.v. in N.V.), and was one of the nations which sponsored the constitution (Aug. 1949) of the Council of Europe. A Franco-Italian agreement preparatory to a proposed full customs union between the two countries was signed in Rome, March 7, 1950. An arrangement whereby letters and postcards might be sent from one country to the other at inland postal rates came into force June 1.

After debating the future of former Italian colonies the U.N. general assembly in Nov., 1949, decided that Libya should become independent by 1952 and that Italian Somaliland should be placed under Italian trusteeship for 10 years (1950-60); a special commission appointed to study the future of Eritrea recommended, Nov., 1950, that the country should become a federal unit of Abyssinia. On April 1, 1950, after nine years of British military administration, Italian Somaliland was transferred to Italian administration.

Jackson, Sir Barry. British theatre manager. He ceased to direct the Shakespeare Memorial Theatre after the 1948 season; in 1949 he became a trustee of the Royal Opera House, Covent Garden.

James, Henry. Anglo-American novelist. Lamb House, Rye, Sussex, his home from 1897 to 1916, was given in 1950 to the National Trust, to be preserved as a museum.

Japan. Rapid progress was made under Allied (chiefly U.S.) occupation in the conversion of Japan into a democratic state on the western model. The great industrial monopolies and feudal estates were broken up. The general elections of 1946, in which women voted for the first time, brought victory to the moderate parties. The supreme commander of the occupying forces, Gen. MacArthur, viewing the pre-war record of the Liberal leader, would not allow him to form a govt., and another Liberal, Shigenu Yoshida, did so. The new diet included 39 women.

The new constitution was adopted in Oct., 1946, and came into force May 3, 1947. Meanwhile, in view of the rapidly changing structure and economic situation

in Japan, further general elections were held, May, 1947, both for the new upper house, the house of councillors, and for the house of representatives. As a result the Socialists became the strongest party in the lower house, with 143 seats, but no majority. In the house of councillors Independents (most of them Conservative) gained a clear majority. Tetsu Katayama became the first Socialist premier over a coalition ministry of Socialists and Democrats (formerly Progressives), the Liberals declining to cooperate. Katayama announced his hope that his govt. would prove to be "founded on moral ethics and based on humanism," but upon dissensions in his own party the govt. resigned Feb., 1948. Hitoshi Ashida, leader of the Democrats, formed a second coalition. This lasted only a few months before it was obliged to resign following disclosure of a bribery scandal in which several members were said to be involved. Meanwhile the former Liberal party had fused with those members of the Democratic party who did not support the coalition, to form a new Democratic Liberal party, essentially conservative in policy, with the former Liberal premier Yoshida at its head. Yoshida now returned to the premiership and formed a Democratic Liberal govt., which, however, was in a minority. But the elections of Jan., 1949, gave this right-wing party an overwhelming majority.

Opposition to the govt.'s "austerity" programme, the dismissal of 80,000 employees from railway and other govt. enterprises, and the return from the Soviet Union of prisoners of war indoctrinated with Communism led to increased Communist activities during 1949, and these in turn to the passing of an anti-strike bill and other anti-Communist measures by the govt.

Detailed figures of Japan's losses and casualties in the Second Great War, issued April 19, 1949, showed that about 40 p.c. of the aggregate urban areas were damaged, with 2,252,000 buildings totally destroyed, 695,000 in Tokyo alone. Loss of human lives was estimated at 1,850,000 (1,555,000 military); injured numbered 7,990,000.

Jaques - Dalcroze, Emile. This Swiss musician, originator of eurhythmics, died at Geneva, July 2, 1950.

Jensen, J. V. This Danish author died Nov. 25, 1950.

John, Augustus Edwin. This British painter pub. the autobiographical *Many-coloured Life*, 1951.

Joliot, Frédéric. This French physicist (who, after his marriage to Irène Curie, took the name Joliot-Curie) was appointed high commissioner for atomic energy in France in 1946. In 1950 he, and in 1951 his wife, were removed from the commission owing to their

membership of the Communist party.

Jolson, Al. This American singer died in San Francisco, Oct. 23, 1950. In two films based on his life story—*The Jolson Story*, 1946, and *Jolson Sings Again*, 1949—Larry Parks acted the part of Jolson, who himself recorded the songs.

Juin, Alphonse Pierre. This French soldier was in Jan., 1951, appointed inspector-general of all French armed forces, remaining at the same time resident-general in Morocco.

Juliana. The queen of the Netherlands, accompanied by her husband, paid a state visit to London, Nov. 21-23, 1950.

Kashmir. Sir Owen Dixon, after spending nearly four months in the capitals of India and Pakistan in unsuccessful efforts to compose the differences of those countries over Kashmir, left Karachi, Aug. 23, 1950. He presented to the U.N. security council on Sept. 19 a report including a recommendation that "the initiative should now pass back to the parties."

The Kashmir dispute was a subject of informal discussion at the conference of Commonwealth prime ministers in Jan., 1951.

Kaye, Danny (b. 1913). American actor. Born Daniel David Kominsky, Jan. 18, 1913, in Brooklyn, New York

city, he was educated locally and had various occupations until his talent for mimicry and clowning brought him engagements as an entertainer at private functions, in hotels, and in night clubs. He played in *Straw Hat Review*, *Ambassador Theatre*, New York, 1939; *Lady in the Dark*, 1940; *Let's Face It*, 1941; and had a great success at the *London Palladium* in 1948 and 1949. Typical of his films were *Up In Arms*, 1943; *Wonder Man*, 1944; *Kid from Brooklyn*, 1945; *The Secret Life of Walter Mitty*, 1946; *A Song is Born*, 1949; *The Inspector-General* 1950.

Kennet, 1st Baron. The diaries and memoirs of Lady Kennet (Kathleen, Lady Scott) were pub. 1949 under the title *Self Portrait of an Artist*.

Keyes, 1st Baron. A plaque in the crypt of St. Paul's cathedral commemorating Lord Keyes and his son Geoffrey was unveiled by W. S. Churchill, 1950.

Keynes, J. M. Keynes, Baron. *Consult Life*, R. F. Harrod, 1951.

Khan, Liaquat Ali (b. 1895). First prime minister of Pakistan. Born Oct. 1, 1895, at Karnal,

He joined the Muslim League, 1923, became its hon. gen. sec., 1936, and was its deputy leader in the central legislative council from 1940 and Jinnah's right-hand man. Finance minister in the interim govt. of 1946, he attended the London conference of 1946 that considered the future of British India, and became prime minister and minister of defence of Pakistan on the formation of that dominion, 1947. He was elected president of the Muslim league in 1950. He attended the London conferences of Commonwealth prime ministers, 1948, 1949 and 1951, and paid official visits to the U.S.A. and Canada in 1950.

Kierkegaard, S. A. Kierkegaard Studies, T. H. Croxall, 1948, was the first full-length study of Kierkegaard's philosophy to be published in the U.K. Consult also Pascal and Kierkegaard, D. Patrick, 2 vols., 1948.

Kildare. Co. of Eire. In 1947 the co. was given three members in the Dáil.

Kilkenny. Co. of Eire. With co. Carlow, Kilkenny was in 1947 given five members in the Dáil.

King, W. L. MACKENZIE. Canadian statesman. He died at his home near Ottawa, July 22, 1950.

Korea. Under an agreement between the U.K., U.S.S.R., and the U.S.A. made in Moscow, 1945, a joint commission of the U.S. and Russian commands in Korea was set up Feb. 6, 1946, with the duty of consulting representatives of Korean democratic parties and making proposals for a four-power (U.S.A., U.S.S.R., U.K., and China) trusteeship, lasting up to five years, before the grant of full independence to Korea. After disagreements over the form and method of choosing an interim govt., this commission suspended its sittings in May, and the U.S.A. referred the problem to the U.N.

In Nov., 1947, the general assembly of the U.N. adopted a resolution advocating the holding of elections, under U.N. observation; the formation of a Korean national govt. with its own security forces; and the withdrawal of all occupation forces within 90 days of the elections. On the committee of observation appointed were representatives of Australia, Canada, China, Salvador, France, India, the Philippines, and Syria; the Ukraine, invited to serve, refused.

This U.N. commission was refused admission to the Russian

zone of occupation. The U.N. "little assembly" then decided that elections should be held in those parts of Korea to which the commission had access, and these were duly held, May 10, 1948. A national assembly met in Seoul on May 31, and adopted a constitution (for the whole country) on July 12. The republic of Korea was proclaimed on Aug. 15, when U.S. military govt. ceased. Syngman Rhee was elected first president. Meanwhile, in N. Korea, a "democratic people's republic," backed by a "people's army," had been proclaimed at Pyongyang (Heijo), Feb. 16, 1948.

Withdrawal of Allied Forces

An insurrection in S. Korea was suppressed by the southern govt. in Oct., 1948; but in Nov., after learning that S. Korea was menaced by 250,000 Communist-led N. Koreans, with troops already stationed along the 38th parallel, the S. Korean assembly asked the U.N. to allow American troops to remain after the Russians had withdrawn from the N. Instead, the U.N. general assembly declared the S. Korean govt. to be the legal, effective, and only freely elected govt. in Korea, replaced the temporary commission of observation by a permanent one, and recommended the immediate withdrawal of all occupation forces. The Russians announced that their last troops left on Dec. 25, 1948. The departure of the last U.S. occupation forces, June 29, 1949, was followed by fighting along the 38th parallel, and in Sept. a report by the U.N. commission stated that the danger of civil war was serious.

On June 25, 1950, N. Koreans invaded S. Korea. An emergency meeting of the security council was held the same afternoon. The Russian delegate (who had attended no meetings since Jan.) was absent. By nine votes to nil, Yugoslavia abstaining, the invasion was declared a breach of the peace. The council called for an immediate cessation of hostilities, and asked all member states "to render every assistance to the U.N. in the execution of this resolution."

On June 26 Pres. Truman announced that he had received a formal appeal for military aid from the Korean ambassador; and on June 27 he stated that he had ordered U.S. air and sea forces to support the S. Korean forces. Simultaneously the appointment of Gen. MacArthur to command operations in Korea was announced, and the same day the security council voted, seven to one, for military sanctions against N. Korea. British naval support was announced June 28, naval units reaching Korean waters on July 2.

By July 4, 41 member states of the U.N. (including all countries of the British Commonwealth) had expressed support for the U.N. standpoint. Russia, Czecho-Slo-

vakia, Poland, and Yugoslavia opposed it, Egypt and the Yemen remained neutral. Italy, though not a member of the U.N., expressed agreement. From Moscow it was asserted that the S. Koreans were responsible, and the U.S.A. was accused of aggression.

The invaders, far more numerous than, and with superior weapons to, the U.N. troops hurriedly sent to Korea, captured Seoul, June 28. American ground troops made their first contact with the invaders July 5; British ground troops reached Korea on Aug. 30. Turkey, Australia, New Zealand, Siam, France, Greece, Israel were among other nations who sent help in some form. The invaders pushed on, and by early August had reached a line roughly running due W. to the Nakdong (Rakuto) R. from a little N. of Pohang (Kokai) on the E. coast, then due S. along the Nakdong and to the S. coast west of Masan. Here, with local gains and losses, they were held by the U.N. forces until mid-Sept., when reinforcements made it possible for MacArthur to land forces at Inchon (Jinsen) at dawn on Sept. 15, and take Seoul Sept. 26. By the end of the month, U.N. forces were again at the 38th parallel, and on Oct. 1, S. Korean troops crossed it, followed by other U.N. troops. N. Korean resistance crumbled, U.S. troops taking Pyongyang, the northern capital, Oct. 19. U.N. forces pushed on into N. Korea, and MacArthur anticipated the end of the campaign by Christmas. Then Chinese troops began to appear in support of the N. Koreans (Oct. 27). At first a few thousand "volunteers," by the end of Nov. Communist Chinese troops in Korea were estimated at half a million. The U.N. armies were compelled to retreat.

MacArthur demanded the branding of Communist China as an aggressor; but the U.N. security council hesitated to attempt this step. A Chinese Communist delegation arrived at Lake Success Nov. 28, but refused to discuss any subject except those it had been sent to discuss, Formosa and the entry of representatives of the Communist govt. into the U.N.

Seoul fell to the Communists again on Jan. 3, 1951, but to the south U.N. forces put up determined and successful resistance.

No military attacks were made on China; but the Communist govt. rejected repeated U.N. attempts to secure a cease-fire, and on Jan. 18, 1951, President Truman pressed for the branding of China as an aggressor. After amendment in the political committee, a U.S. proposal to this effect was endorsed by the general assembly (44 to 7, 9 abstentions), Feb. 1. Consideration of possible sanctions was deferred.

Kravchenko Case. A Russian, Victor Kravchenko, who went in 1943 to the U.S.A. with a Soviet

purchasing commission, became a political refugee in 1944, and pub. a book entitled *I Chose Freedom*, giving a personal account of life and govt. in the Soviet Union. This had an enormous initial sale in the U.S.A., the U.K., and elsewhere. In April and Nov., 1947, and again in April, 1948, there appeared in the pro-Communist French periodical *Les Lettres Françaises* a series of articles attacking Kravchenko. It was alleged that he was incapable of writing the book and that it was the work of American agents; further it was alleged that Kravchenko was a tool of the U.S. secret service; "a drunkard, liar, and traitor"; that he had been dismissed from a factory in Russia for moral reasons and had been found guilty of dishonest practices.

Kravchenko brought a libel action against the paper, and after hearings in Paris which lasted from Jan. 24 to April 4, 1949, judgement was given in his favour. The defendants—the manager and editor of the periodical—were ordered to pay 150,000 francs damages, a fine of 10,000 francs, and costs, and to print the court's judgement on the front page of *Les Lettres Françaises*. The Paris appeal court on Feb. 6, 1950, while upholding the fine, reduced the damages to one franc; the court held that the original damages were not justified in view of the increased sales of his book through the publicity given to the court case.

As is usual in French courts, many matters extraneous to the action for libel were brought forward, particularly allegations against the Soviet system and conditions in Russia. Among witnesses for the defence were Gen. Rudenko, Kravchenko's former chief in Washington and the chief Russian prosecutor in the Nuremberg trials; F. Joliot-Curie, then head of the French atomic energy commission; K. Ziliacus, at that time M.P. for Gateshead; and Hewlett Johnson, dean of Canterbury. Evidence concerning the Soviet regime given by witnesses for the prosecution made a great impression on public opinion and was damaging for the French Communist party. Kravchenko's own account of the case was published in the U.S., 1950, under the title *I Chose Justice*. *Consult also* Kravchenko v. Moscow, Sir T. Humphreys, 1950.

Krupp. ALFRED KRUPP VON BOHLEN was freed Jan. 31, 1951, and the confiscation of his property cancelled, by the U.S. authorities in Germany.

Laidlaw, DANIEL. This Scottish piper, a V.C. of the First Great War, died June 2, 1950, aged 74.

Lake Success. The secretariat of the U.N. moved to the United Nations building in N.Y.C. Jan. 11, 1951.

Larwood, HAROLD. English cricketer. He emigrated to Australia in April, 1950.

Lascaux. Locality in Dordogne, France, where remarkable cave paintings were discovered in 1940. Situated in a wooded hill overlooking Montignac, on the Vézère, the cave was discovered by chance by four boys, Sept. 1940. The main cavern measures roughly 90 ft. in length and 30 ft. in width, and its walls are decorated with prehistoric drawings of horses, cows, bulls, and a bear, which are painted in black, red, and ochre. In an excellent state of preservation, the lifelike representations of these animals, which, it is believed, were etched with pointed flints, are calculated to date back some 20,000 years and are about 2,000 years older than the celebrated paintings in the Altamira caves, Spain. *Consult* The Lascaux Cave Paintings, F. Windels, 1950; Lascaux: A Commentary, L. Drummond, 1950.

Lavalleja. Later name of the town in Uruguay formerly called Minas (*q.v.* in main text).

Lawrence Trophy. The award of this trophy for the fastest century in first-class cricket fell into abeyance in 1939. In 1950 a London newspaper instituted another trophy for the same feat (with a prize of £100 if the winner was a professional).

Layton, WALTER THOMAS LAYTON, BARON. He resigned the chairmanship of the News Chronicle and Star in April, 1950, remaining on the board of the Daily News Ltd.

Leahy, WILLIAM DANIEL. In 1949 this American admiral resigned his post as chief-of-staff to President Truman. His volume of war-time memoirs, *I Was There*, was published, 1950.

Lehman, HERBERT H. U.S. politician. He became a senator for New York state, Nov., 1949.

Leitrim. Co. of Eire. With co. Sligo, Leitrim was, in 1947, given five members in the Dáil.

Leopold III. King of the Belgians. On April 15, 1950, in a speech broadcast to the Belgian nation, Leopold (then in Switzerland) suggested that after parliament had asked him to resume his constitutional functions, he might delegate his powers for a time to his son Baudouin. Following a general election (*see* Belgium in N.V.), Leopold was invited to return to Belgium, and, after some delay, agreed, Aug. 1, to delegate his powers to Baudouin pending that prince's accession to the throne on attaining the age of 21 (Sept. 7, 1951); and retired into private life.

Lewis, CECIL DAY. He was elected professor of poetry at Oxford, 1951.

Lewis, (PERCY) WYNDHAM. This British painter pub. the autobiographical *Rude Assignment*, 1950.

Lewis, SINCLAIR. This American novelist died Jan. 10, 1951.

Liberté. French liner. *See* Europa in N.V.

Libya. A constituent assembly of 20 delegates each from Tripoli-

tania, Cyrenaica, and the Fezzan met in Tripoli Nov. 25, 1950, and on Dec. 3 proclaimed Mohamed Sayed Idriss el Senussi as king-designate of united Libya.

Liddell Hart, B. H. British writer on military topics. In 1948 he published *The Other Side of the Hill*, an examination of documents by German generals relating to the Second Great War; his *Defence of the West* appeared in 1950.

Livingstone. Town of N. Rhodesia. A new airport was opened here in August, 1950.

Local Government and Planning, MINISTRY OF. Name given in Jan., 1951, to the ministry of Town and Country Planning (*q.v.* in main text).

Longford. Co. of Eire. With Westmeath, Longford was in 1947 given five members in the Dáil.

Long Service and Good Conduct Medal. Name of two separate British awards instituted by royal warrant in 1950. One, also known as the Royal Observer Corps medal, is granted to members of that corps who complete twelve years' satisfactory service. Allowance is made for those whose service was interrupted by service in the armed forces. Special constables who did observer duties in the Second Great War are also deemed eligible. The medal has on the obverse an Elizabethan coast-watcher standing beside a signal beacon, holding a torch; reverse, a crowned effigy of the sovereign. The ribbon is dark blue, light blue, and silver-grey.

The second long service and good conduct medal, the Cadet Forces medal, is for officers, chief petty officers, and adult warrant officers completing twelve years' satisfactory service in or with cadet units. This medal, made of cupronickel, is circular, bearing on the obverse the royal effigy crowned, and on the reverse a torch. The ribbon is green edged with yellow, with superimposed narrow stripes of dark blue, red, and light blue. A clasp is awarded for each additional qualifying period of twelve years. Service with a cadet unit in war-time counts as double.

Louis, JOE. American boxer. In 1950 he was beaten on points over 15 rounds by Ezzard Charles in a fight for the world heavy-weight championship.

Lovelock, JOHN EDWARD (1910-49). New Zealand athlete. He was born at Temuca, New Zealand, and after attending Timaru high school and Otago university he became a Rhodes scholar in Exeter College, Oxford, in 1931. Later he studied medicine at St. Mary's hospital, London. In 1932 he set up a British mile record of 4 min. 12 sec., and in the following year ran his world's record mile of 4 min. 7.6 sec. at Princeton, New

Jersey. In the Berlin Olympic Games of 1936 he won the 1,500 metres in the Olympic record time of 3 min. 47.8 sec. After serving in the Second Great War in the R.A.M.C. and A.P.T.C., in 1947 he took a post in Manhattan hospital, New York. He was killed when he fell in front of an underground train at Brooklyn, Dec. 28, 1949.

Lucerne. Canton of Switzerland. Pop. (1950) 223,409.

Lupescu, MAGDA. She was deprived of Rumanian citizenship by a Bukarest decree of 1948. On Aug. 18, 1949, a religious marriage was solemnised between her and the ex-king Carol, at Estoril, Portugal, and it was announced that she would take the title princess and the name Helena.

Luzon. The capital of the Philippine republic was formally transferred from Manila to Quezon City, July 17, 1948.

Lynskey Tribunal. Judicial tribunal appointed by the British govt. in 1948 to investigate allegations of irregularities in govt. depts. involving ministers of the crown and other public servants. It was composed of Sir George (Mr. Justice) Lynskey, as chairman, and two eminent K.C.s, and sat at Church House, Westminster, in Nov.-Dec. Their report found that J. Belcher, parl. sec. to the board of trade, and G. Gibson, a director of the Bank of England, had acted irregularly in certain instances, the former under a sense of obligation following the receipt of gifts and hospitality from a certain Sidney Stanley, the latter in the hope of material advantage. Both men had resigned the offices mentioned before the report's publication. All other ministers and public servants cited were wholly exonerated.

The tribunal's report was adopted by the house of commons with only one dissident. Belcher made a personal statement and announced his intention of giving up his seat.

A committee set up by the govt. in Feb., 1949, to investigate the activities of "contact men" reported in March, 1950, that in the U.K. such people are few in number, that their activities were normally reputable, nor were they on a scale that would justify any general restrictions on them.

Lytton, NEVILLE STEPHEN, 3rd earl Lytton, died in Paris Feb. 9, 1951, and was succeeded by his only son, Noel Anthony Scawen (b. April 7, 1900).

MacArthur, DOUGLAS. U.S. soldier. He was appointed supreme commander in charge of U.N. operations against North Korea, June, 1950. See Korea in N.V.

MacCarthy, DESMOND. This British literary critic was knighted, 1951.

McCracken, SIR FREDERICK W. N. This British soldier died Aug. 8, 1949.

McCreery, SIR RICHARD LONDON. He retired from his post on the military staff committee of the U.N., 1949, in which year he was created G.C.B.

McCulloch, DEREK I. B. He resigned from the B.B.C., 1950, to join the News Chronicle.

Madhya Bharat. State of India. Pop. (1950 est.) 7,870,000.

Madhya Union. State of India (formerly Central Provinces). Pop. (1950 est.) 20,920,000.

Madras. State of India. Pop. (1950 est.) 54,290,000.

Malaya, FEDERATION OF. A series of acts of terrorism and lawlessness by the so-called Malayan People's Anti-Japanese Army (originally a Communist resistance army formed during the war by Chinese resident in Malaya), with h.q. in jungle areas, assumed serious dimensions from May, 1948. European plantation managers, Chinese non-Communists, and Malayan trade unionists were murdered; there were also many Communist-inspired strikes on rubber plantations and in mines. The govt. of Malaya declared the Pan-Malayan trade union federation illegal, and proclaimed a state of emergency in certain districts, among other measures imposing the death penalty for unauthorised possession of arms. British army reinforcements were sent to assist police and Gurkha troops in a drive against the terrorists in the jungle. Units of the R.A.F. also took part.

The Communist victory in China at the end of 1949 encouraged the leaders of the Malayan Communist movement, and from the beginning of 1950, despite increasing government activity, the number of bandit incidents grew progressively higher. In April, 1950, it was announced that since June, 1948, 1,138 bandits had been killed, 645 had been captured, and 359 had surrendered; the number of armed bandits still operating was estimated at 3,000. During the same period 323 police, 154 members of the fighting services, and 803 civilians were killed. Reinforcements of ground troops and air transport were dispatched from Britain and Hong Kong, and in April Lt.-Gen. Sir Harold Briggs (late of the Indian Army) was given wide powers to direct operations. The "Briggs plan" launched in June involved complete co-ordination between army, police, and the civil administration, and the reinforcing of security measures with the object of bringing security to all populated areas. Important in this connexion were plans for the regrouping of settlements of Chinese squatters who, often living in remote jungle regions, were terrorised into providing the bandits with supplies. New regulations by the Federal govt. imposed the death penalty from June 1, 1950, on agents found collecting or receiving money, food, or clothes for terrorists.

In face of these difficulties great progress was made in the restoration of the war-damaged tin and rubber industries, Malaya becoming the chief dollar-earner of the countries of the British commonwealth. A five year plan of research and development in the rubber industry was announced Jan. 1, 1950.

The University of Malaya came officially into existence on Oct. 8, 1949, when the opening ceremony was held at Raffles College, Singapore. Malcolm MacDonald, high commissioner in S.E. Asia, was appointed the first chancellor.

Malmesbury, EARL OF. The 5th earl died June 12, 1950, and was succeeded by his son, William James (b. 1907).

Malta. Consult also Malta: an Account and Appreciation, Sir Harry Luke, 1949.

Man. Discoveries have clarified some of the most important problems of human evolution. In Kenya there have come to light remains of extinct apes of the Miocene period (estimated to be 20-30 million years old). These early apes were much more primitive than those which exist today; in particular, their limbs did not show the extreme modifications for arboreal life such as are found in modern apes. This seems to dispose of the difficulty which some anatomists have felt regarding the conception of man's descent from a simian ancestor, their argument being that it is unlikely that limbs of a human type could have been derived from the highly specialised limbs characteristic of the modern apes. The E. African discoveries now make it clear that in the Miocene apes (from some group of which it is probable that the human stock was derived) the limbs were by no means so highly specialised.

In S. Africa many more remains of the Australopithecinae were excavated—by 1950 more than 30 skulls or portions of skulls, large numbers of teeth, and several limb bones. All this new material confirms the earlier conclusions regarding these extinct ape-like creatures. They had small brains, hardly exceeding in size that of a gorilla, and massive jaws. By contrast, the teeth (in spite of their size) were essentially human in structure and closely similar to those of primitive hominids such as *Pithecanthropus*, while many of the anatomical details of the skull approximate in a remarkable way to those characteristic of the human skull. The most impressive evidence, however, is provided by the pelvic skeleton. Three specimens of the pelvis found at three different sites were each associated with other Australopithecine remains. All three specimens are predominantly human in their general shape (though at the same time they also show some curiously primitive

features). Together with evidence of thigh-bone fragments also found, and of certain details of the base of the skull, the pelvic skeleton removes any further doubt that the Australopithecinae were capable of standing and walking in approximately human fashion. There is good reason, indeed, to suppose that they represent the earliest phase in the evolution of the human family so far discovered.

New evidence came to hand in 1949 in support of the contention of the original discoverers that the Piltdown skull (predominantly human in its general characters) and the Piltdown jaw (regarded by some authorities as that of an ape) really do belong to the same individual. This evidence depends on the analysis of the fluorine content of the fossil bones, which has been found to be identical in all the fragments. On the other hand, this chemical test has also made it clear that the Piltdown man is not nearly so ancient as had been supposed; probably he existed no earlier than the last interglacial phase of the Pleistocene period.

At Swanscombe in Kent, and at Fontécheval in the Charente district of France, there have been found portions of human skulls which definitely antedate the Mousterian period of Neanderthal man. Both skulls are very similar to that of *Homo sapiens* and show no Neanderthal characteristics. These discoveries confirm the supposition that the extreme types of Neanderthal man played no part in the evolution of *Homo sapiens*, but are rather to be regarded as an aberrant side-line of evolution which ultimately became extinct. On the other hand, the famous Galley Hill skull, which had been accepted by some anthropologists as evidence for the great antiquity of *Homo sapiens*, has now been shown by the fluorine test to be comparatively recent—probably of Neolithic date. Further discoveries of *Pithecanthropus* made in Java confirm the general conclusion that this early type was essentially human, though showing many primitive characters such as small brains, large jaws, and a retreating forehead. At the same time, they suggest that these primitive hominids may have shown considerable diversity of form.

Manila. The capital of the Philippine Republic was formally transferred from Manila to Quezon City, July 17, 1948.

Manipur. State of India. Pop. (1950 est.), 540,000.

Manitoba. In May, 1950, floods in the Red River valley did great damage to a large area of southern Manitoba, including the city of Winnipeg.

Mannerheim, G. C., BARON. This Finnish soldier died at Lausanne, Jan. 27, 1951.

Mao Tse-tung (b. 1893). Chinese Communist leader. Born at Shaoshan, Hunan, 1893, the son of a farmer, he was educated at Chang-

sha normal school and was a teacher for a short time. He joined the Chinese Communist party in 1921, and during 1922-27, when the Communists allied themselves with Chiang Kai-shek's Kuomintang, devoted himself to spreading Communist doctrine amongst the peasants of Hunan and the neighbouring provinces. In 1927 Chiang turned against the Communists, and most of their surviving leaders went into hiding; but Mao armed his peasants and, though he suffered reverses, managed to form a Communist administration in Kiangsi. In 1934, to escape the Kuomintang forces, he led his army on a march of 8,000 miles to Yenan, in Shensi prov., some 85 m. S.E. of the Great Wall. There he formed a Communist govt.

When the Japanese attacked China, 1937, he cooperated with Chiang's national govt. against the enemy; but friction soon developed, and Mao continued to extend the area of Communist domination within China. After Japan's surrender, 1945, Chiang invited him to Chungking in the hope of achieving unity, but in 1946 the Communist armies started a general offensive towards Manchuria, and relations with the national govt. were completely severed March, 1947. By Feb., 1948, Mao had virtual control of Manchuria, and nationalist forces were deserting to him in large numbers. Invading China proper, the Communists captured Peiping (Peking) Jan. 22, 1949, and by the end of that year Chiang's authority had been eliminated throughout the Chinese mainland. On Oct. 1, 1949, the people's republic of China was inaugurated at Peking, with Mao as chairman of the central govt. and head of state. On Feb. 14, 1950, after several weeks of negotiation in Moscow, he signed a 30-year treaty of friendship, alliance, and mutual assistance between the U.S.S.R. and Communist China. See China and Korea, both in N.V.

Mark. German currency unit. In June, 1948, the inflated currency was again reformed by the cancellation of Reich debts to about 400,000 million Reichsmarks (at the original official rate, £40,000 million), and by reducing cash and bank deposits to 10 p.c. (at best) of their nominal value in new *deutsche* marks in the three western zones of occupied Germany, less drastically by new *ost* marks in the Russian zone. The official rate of exchange of the D.M. was

12:35 to the £. In Dec., 1948, one D.M. equalled approx. 3 O.M.

On Sept. 29, 1949, following the devaluation of the pound, the value of the D.M. was fixed at 11:76 to the £1.

Marshall, GEORGE CATLETT. U.S. soldier and administrator. He was appointed secretary of defence, Sept. 12, 1950.

Matrimonial Causes Act. See Divorce in N.V.

Maude, CYRIL. This British actor died at Torquay, Feb. 20, 1951.

Meath. Co. of Eire. In 1947 Meath was given three members in the Dáil, Westmeath being joined to Longford for electoral purposes.

Menzies, R. G. This Australian statesman was made C.H., 1951.

Mercury. British training ship. C. B. Fry, honorary resident director from 1908, resigned 1950.

Miaskovsky, NICOLAI Y. This Russian composer died Aug. 9, 1950.

Michaëlis, KARIN. This Danish writer died Jan. 11, 1950.

Milch, ERHARD. The life sentence passed on this German air officer was reduced Jan. 31, 1951, by the U.S. authorities in Germany to 15 years.

Miles, EUSTACE HAMILTON. This British food reformer died Dec. 20, 1948.

Military Service Acts. By an amending Act of Sept., 1950, the period of full-time service was extended to two years, followed by 3½ years in the reserve.

Millay, EDNA ST. VINCENT. American poet. She died in New York, Oct. 19, 1950.

Milne, EDWARD ARTHUR. This British scientist died in Dublin, Sept. 21, 1950.

Minot, GEORGE RICHARDS. This American physician died Feb. 25, 1950.

Moeran, E. J. This British composer died at Kenmare, co. Kerry, Eire, Dec. 1, 1950.

Montreuil. Town of France. A bronze statue of F.M. Earl Haig, unveiled in the market square here, 1931, was destroyed by Germans during the Second Great War, and replaced identically (from the same mould), 1950.

Mont Valérien. Hillock a few miles W. of Paris, where 4,500 hostages were shot by the Germans during their occupation of the city, 1940-44. It was consecrated as a national shrine June 18, 1946, when an "eternal flame" was lit by Gen. de Gaulle.

Müller, PAUL (b. 1899). Swiss chemist. Born at Basel, Jan. 12, 1899, he studied at the university there and in 1925 joined the staff of a local dyestuff company, carrying out research work in the laboratories. Owing to his interest in botany, he became concerned with the protection of plants against insects, and as a result of experiments ranging over a period of some 10 years he discovered the insect-killing properties of D.D.T.

He was awarded the Nobel prize for medicine, 1948.

Murder. An amendment to the Criminal Justice bill, 1948, proposed to suspend the death penalty for murder for a trial period of five years as a preliminary step to its abolition. A free vote of the house of commons approved this amendment, to the surprise of the country generally. The lords having deleted the clause, a compromise plan was introduced by the govt. by which murder offences would be divided into two categories, only those committed with "express malice" being punishable with the death penalty, together with those arising from certain clearly defined crimes, e.g. robbery, rape, resistance to the course of the law, obstruction of police or prison officers, also for second murder convictions. This compromise was also rejected by the lords, and a royal commission was set up in Nov., 1948, to inquire into the possible limitation of the death penalty. All criminals condemned to death were reprieved from April 16, after the passing of the first amendment by the commons, until Nov. 17. The Criminal Justice Act, July 30, 1948, made no change in the law relating to the death penalty.

Mysore. State of India. Pop. (1950 est.) 8,060,000.

National Health Service. Public service of the U.K., set up under the National Health Service Act, 1946. The object of this act was "to promote the establishment in England and Wales of a comprehensive health service designed to secure improvement in the physical and mental health of the people of England and Wales, and the prevention, diagnosis, and treatment of illness." Administered by the ministry of health, it brought into a single service the partial and incompletely coordinated services formerly provided by the general practitioner scheme of the old National Health Insurance Acts, the local authority clinic and domiciliary services, and the municipal and voluntary hospitals. The National Health Service (Scotland) Act, 1947, provided a similar service for Scotland, administered with slight differences in local organization by the Scottish office; an act, 1947, of the N. Ireland Parliament, applied the service to N. Ireland. The three acts came into force July 5, 1948.

The three parts of the health service were:

1. **Hospital and Specialist Service.** This welded into a single service the old voluntary and municipal hospitals, nearly all of which were vested in the minister. The non-teaching hospitals were placed under 14 regional hospital boards which delegate day-to-day management to hospital management committees. Each of the 36 teach-

ing hospitals was given its own board of governors. The hospital service provides without charge specialist services, for both in-patients and out-patients, together with domiciliary consultations where medically necessary. (Private and semi-private accommodation must be paid for.) All necessary drugs and appliances are also supplied without charge. Blood transfusion and mass radiography services are also provided.

2. **Local Health Authority Services.** The act centres all the clinic and domiciliary services on counties and county boroughs, which are designated local health authorities. The L.H.A. looks after expectant and nursing mothers and children under five, provides midwife, health visitor, home nurse, and domestic helper, an ambulance service and health centres; arranges for vaccination, immunisation, and the prevention, care, and after-care of disease. Some of these services are given without charge; for others the authority is empowered to make a charge.

3. **General Medical Service.** The act set up executive councils to administer the general medical, the general dental, the pharmaceutical, and the supplementary ophthalmic services. A list of doctors in any given neighbourhood willing to accept patients can be consulted at the local post office, or at the office of the executive council, whose address can be obtained at a p.o. Each doctor has a list of patients who have chosen him and whom he has accepted, and to whom he has agreed to give all ordinary general practitioner services. For each he receives a capitation fee; he makes no charge to the patient. Dental treatment is also given without charge. Necessary drugs, obtained through a pharmaceutical chemist or from the doctor, are supplied free. General practitioners may order some appliances. The supplementary eye service entitles patients to an eye-test and the supply of spectacles without charge; spectacles can also be obtained through the hospital service. A general practitioner obstetrician or the patient's usual doctor gives maternity care.

MEMBERSHIP OF COMMITTEES. Members of the various boards, committees, and councils are all appointed by, or after consultation with, appropriate bodies. They are selected from men and women having the necessary qualifications and experience who give their services, receiving only their expenses. A central health services council and a number of standing advisory and special sub-committees advise the minister.

FINANCE. The health service is in the main a charge on the exchequer. L.H.A. services are financed partly from the rates.

In 1948 only 8½d. of a man's contribution of 4s. 11d. under the National Insurance Act went to the health service. The national health service is thus not an insurance scheme; it is available to everyone, whether an insured person or not. See Beveridge Report; Health, Ministry of; Insurance, National (all in main text).

National Service. By an amending Act of Sept., 1950, the period of full-time service was extended to two years, followed by 3½ years in the reserve.

Nazimuddin, KHWAJA (b. 1894). Pakistan statesman. Born at Dacca, July 19, 1894, he was

educated at Cambridge, became a barrister-at-law, and had a successful political career in Bengal, where he was successively minister of education, home minister, and chief minister. He became a leading member of the Muslim league. Knighted 1934, he joined with other Muslim leaders in their renunciation of British titles in 1946. On the formation of Pakistan in 1947 he became prime minister of E. Bengal prov., and on the death of Jinnah in 1948 was appointed the second gov.-general of Pakistan, taking the oath Sept. 14.

Nazism. After appeals and retrials Schacht was acquitted, and Fritzsche and Papen were later set free on compassionate grounds. As late as 1949-50 certain *Gauleiters* and heads of Nazi party organizations were still being discovered in hiding, but in general denazification was completed. In the Russian-occupied zone of Germany there was a series of amnesties for former Nazis, many of whom joined the Communist party.

A recrudescence of the Nazi spirit was evidenced by replies in public opinion polls held in the U.S. zone, to the question "Was National Socialism merely a good idea badly carried out?" In 1946 40 p.c. answered "yes" to this question, in 1947 52 p.c., and in 1949 55½ p.c. At the time of the federal election of 1949 several quasi-Nazi parties began to appear.

Nelson, EARL. Albert Francis Joseph Horatio (b. Sept. 2, 1890) became 6th earl on the death of his father, Jan. 30, 1951.

Nepal. Differences between King Tribhuvana and his prime minister led in Nov., 1950, to the flight of the king with his eldest son and other members of his family. They took refuge in the Indian embassy at Kathmandu, and were flown to Delhi in an Indian plane. The king wished to democratise the govt.; the prime

minister rejected his proposals. But through the good offices of the Indian prime minister, Jawaharlal Nehru, better feeling was produced. Constitutional reforms were announced on January 7, 1951; and on February 15 the King with his family returned by air from Delhi to Khatmandu.

Neptune (planet). A second satellite was discovered, 1949, with the 82-in. reflector of McDonald observatory, Mt. Locke, Texas.

New Guinea. Talks at The Hague between Dutch and Indonesian delegates on the future of west (Netherlands) New Guinea broke down in Dec., 1950. The Indonesians demanded full and immediate sovereignty over the area; the Dutch wished to hold, at a time to be agreed, a plebiscite to decide the future of the country.

The eruption in N.E. New Guinea, Jan., 1951, of Mt. Lamington, 30 m. S.W. of Buna, caused deaths est. at more than 4,000, and devastation over an area 16 m. in diameter.

New Zealand. The legislative council, upper house of the N.Z. parliament, abolished itself from Jan. 1, 1951, by an act passed by 26 votes to 16, Aug. 18, 1950.

Nicola, ENRICO DE (b. 1877). First president of the republic of Italy. Born in Naples, Nov. 9, 1877, he studied law at the university there, and practised in criminal law. Deputy (non-party) for Afragola, 1909-24, he was president of the chamber 1920-23, and under-secretary of state under Orlando and Giolitti. Four times he declined an invitation from King Victor Emmanuel III to form a govt. During the fascist regime he retired from politics and resumed practice as a lawyer, accepting a senatorship, however, in 1932.

Acting on behalf of the committee of national liberation, he persuaded the king to abdicate in 1944. On the proclamation of the Italian republic, he was elected, June 28, 1946, provisional president. He was confirmed in office, 1947, but ill-health led him to resign in May, 1948.

Nightingale, FLORENCE. *Consult also* Florence Nightingale, C. Woodham-Smith, 1950.

Nile. In 1949 a new project was put in hand for using the headwaters of the Nile as a source of irrigation and electric power over wide areas of central and N. Africa. The project included the regulation of the Blue Nile; the use of Lake Tsana, Abyssinia, as a storage reservoir; a canal system by-passing the river-swamp region of the southern Sudan; and a dam at Owen Falls. See Owen Falls Dam in main text.

Nobel Prize. The 1950 prizes were awarded as follows:

Physics. Cecil F. Powell, professor of physics at Bristol uni-

versity, for his development of the photographic method for the study of nuclear processes and his work on mesons;

Chemistry. Otto Diels, former professor of Kiel university, and Kurt Alder, of Cologne university;

Medicine. Philip S. Hench and Edward C. Kendall (U.S.A.) and Tadeusz Reichstein (Switzerland) for contributions towards the discovery of cortisone (*q.v.* in N.V.);

Literature. Bertrand Russell (*q.v.* in main text);

Peace. Ralph Bunche (*q.v.* in N.V.).

The 1949 literature prize, which had been withheld, was awarded in 1950 to William Faulkner (*q.v.* in main text).

North Atlantic Treaty. A 20-years' defensive alliance formed in 1950 by 12 countries of North America and Western Europe. In March, 1949, the U.S.A., Canada, the U.K., France, Belgium, the Netherlands, Luxembourg, and Norway issued the text of a proposed pact for the collective defence of the North Atlantic area, and at their invitation Denmark, Iceland, Italy, and Portugal joined them. The treaty was signed in Washington by the 12 participating nations, April 4, 1949, and came officially into force Aug. 24. It was the first pact in history in which during peace-time the U.S.A. undertook commitments in Europe. Besides the home territories of the member nations, the agreement covered Algeria, Malta, and Gibraltar; the British, American, and French zones of Germany; the Anglo-American zone of Trieste; and island possessions of treaty powers in the Atlantic, such as Bermuda and the Bahamas.

At the head of the organization was the North Atlantic council of the foreign ministers of the 12 powers; this later appointed a council of deputies to be in continuous session. The council set up a defence committee (consisting of the defence ministers of member nations); a military committee (chiefs of staff or their deputies), with a sub-committee known as the standing group, having one representative each of the U.K., France, and the U.S.A.; and five regional planning groups. These covered (1) Northern Europe: the U.K., Norway, Denmark; (2) Western Europe: the U.K., France, Belgium, the Netherlands, and Luxembourg; (3) Southern Europe-Mediterranean: the U.K., France, Italy; (4) North America: the U.S.A. and Canada; (5) North Atlantic: all members except Italy and Luxembourg.

At a meeting of the North Atlantic council held in Sept., 1950, it was decided to create an integrated N. Atlantic defence force. Gen. Eisenhower was appointed, Dec. 18, supreme commander in Europe of N. Atlantic forces, taking up his duties early in Jan., 1951.

Nottingham, UNIVERSITY OF. This seat of learning originated as a university college founded in 1881, the first in England established by municipal action. In 1928 Sir Jesse Boot (later 1st Lord Trent) provided fine new buildings for the college on the west of the city. By royal charter the college was granted full university status in July, 1948, the 2nd Lord Trent being appointed the first chancellor in recognition of his father's benefactions. The university, with faculties of arts, pure and applied science, agriculture and horticulture, has over 2,000 students. In May, 1949, an appeal was launched for £1,000,000 in order to make the university wholly residential for men and women.

Oberammergau. The Passion play was revived in 1950, for the first time since 1934. *Consult* Oberammergau and its Passion Play, E. Corathiel, 1950.

O.E.E.C. Initials of Organization for European Economic Co-operation, which was set up in Paris, April 16, 1948, by the 16 nations participating in the European Recovery Programme (*q.v.* in N.V.).

Old Vic. War damage having been repaired, the theatre in Waterloo Road was re-opened in Nov., 1950.

Outward Bound Trust. British organization for promoting the training of lads from factories and secondary schools in open air activities. Founded in 1946, it originated in 1941 with the opening of the Outward Bound sea school at Aberdovey, Merionethshire. The Moray sea school was started at Gordonstoun, Scotland, 1948, and a mountain school at Eskdale, Cumberland, 1950. Outward Bound schools give short courses of training in walking, running, climbing, management of small craft, etc. to about 2,000 boys a year. The h.q. of the trust is at 40 Broadway, London, S.W.1.

Overseas Food Corporation. British organization for promoting the production of foodstuffs and agricultural produce outside the U.K. Established by the Overseas Resources Development Act, 1948, it was empowered to borrow up to £50,000,000 and was answerable to the ministry of food. One of its first duties was to take over the East African ground nut scheme, and in its report published in June, 1950, it was stated that the basic fault in the venture, which had cost over £30,000,000, was the failure to realize the impracticability of the original plans in the conditions obtaining after the Second Great War. Up to April 21, 1950, the corporation had been advanced £34,650,000, which sum included expenditure on the ground nut scheme, nearly £1,000,000 for the Queensland sorghum project, and

about £2,000,000 for railway and port work in East Africa. *See also* Colonial Development Corporation, Ground Nut Scheme, both in N.V.

Palestine. Eight hours before the British mandate ended at midnight on May 14-15, 1948, the Jews in Palestine proclaimed the new Jewish state of Israel (*q.v.* in N.V.).

Fighting had been going on between Jews and Palestinian Arabs since the publication of the U.N. partition plan for Palestine the previous Nov. Simultaneously with the ending of the mandate, the country was invaded by Egyptians from the S., the Transjordan Arab legion from the E., and a Syrian-Lebanese force from the N. The Egyptians took Gaza, May 16, and Beersheba, May 20; the Transjordan forces took Jericho, May 15, and entered Jerusalem, besieging the Jews in the old city until their surrender after bitter fighting, May 28. The Syrians took Samakh, S. of Lake Tiberias, May 17, but next day Israeli forces captured the Arab port of Acre.

The U.N., which had decided May 14 to appoint a mediator, chose Count Folke Bernadotte on May 20; and on the 22nd the security council called without effect for a cease-fire within 36 hours. A new U.N. resolution for a four-week truce, proposed by the U.K. and passed by the security council May 29, was accepted by Arabs and Jews on June 1, the cease-fire taking effect from June 11. By that date all the territory assigned to Israel under the U.N. partition plan (*see map* in p. 6302), except parts of the Negeb, was in Jewish hands, together with 400 sq. m. more.

Bernadotte established his h.q. in Rhodes, June 13; on the 16th he had consultations with the Arab league in Cairo, and on the 17th visited the provisional Israeli govt. at Tel Aviv. On the 28th he handed to Arab and Israeli representatives in Rhodes his proposals for a settlement, the principal provisions of which were: 1, the setting up of a union composed of a Jewish Palestine and an Arab Transjordan; 2, the Negeb in whole or in part to go to the Arabs; 3, W. Galilee in whole or in part to go to the Jews; 4, Jerusalem to be included in the Arab part of the union, with municipal autonomy for the Jewish community there, and special protection for the holy places. Both Israel and the Arab league rejected these proposals. The Arab league rejected also a U.N. proposal for the extension of the truce, due to expire on July 8, and on that day fighting was resumed. By the time it ceased again on July 18, under a U.N. threat to apply sanctions, the Jews had taken Nazareth, Lydda, and Ramleh, and secured all W. Galilee, thus greatly improving their military position.

Minor infractions of the cease-fire continued, especially in Jerusalem, and serious fighting flared up again during Oct. in the Negeb, the

Israelis taking Beersheba Oct. 21, and on the Lebanese frontier, where an Arab "liberation army" 5,000 strong was routed by the Israelis. In Dec. heavy fighting again broke out in the Negeb, and anxiety caused by Jewish violations of the Egyptian frontier led Transjordan to request the sending of, and the British govt. to send, Jan. 8, 1949, a small British force to the port of Akaba in Transjordan, at the head of the Red Sea and near the point where the frontiers of Transjordan, Palestine, and Egypt met. The previous day five British planes on reconnaissance on the Egyptian side of the border had been shot down by Israeli fighters, one British pilot being killed.

A proposal made by a group of Palestinian Arabs meeting at Jericho on Dec. 1, 1948, that Transjordan should be united with Arab Palestine under King Abdullah, was accepted by the Transjordan govt. and by the king.

Hashemite Kingdom of Jordan

Although other members of the Arab league strongly opposed the proposal, the union was formally endorsed, April 11, 1950, by a new parliament elected from both Transjordan (called officially the Hashemite kingdom of the Jordan from June, 1949) and the part of Arab Palestine under Jordanian control, and was recognized, subject to possible frontier adjustments in the final settlement of Palestine, by the U.K., April 27.

Abdullah's acceptance of this proposal disrupted the unity of Arab opposition to Israel, and negotiations conducted under U.N. chairmanship in Rhodes between Egypt and Israel, Jan. 13-Feb. 24, ended in an armistice which left each country, with minor adjustments, in possession of the areas it occupied on Jan. 24. Armistices followed with Transjordan, April 3; Lebanon, March 23; and Syria, July 20.

Meanwhile, a U.N. conciliation commission, set up Dec. 12, 1948, and consisting of representatives of the U.S.A., France, and Turkey, had, after a tour of the Arab countries, called together representatives of Israel, Egypt, Transjordan, the Lebanon, and Syria at Lausanne, April 27, 1949. Talks went on until June 25 without result. Two problems seemed insoluble. Something like a million Arabs had fled from Israeli-occupied Palestine, and much of the room they had left had been taken up by Jewish immigrants. Israel insisted that settlement of the refugee problem should be part of a general settlement; the Arab states insisted that the refugee problem must be settled before territorial negotiations could begin. The Jews insisted that Jerusalem must be within Israel, though their govt. favoured the internationalisation of the holy places under the U.N.

Discussions at Lausanne were resumed July 18-Sept. 15, 1949, and

on Aug. 3 Israel informed the conciliation commission that she was prepared to accept the return of 100,000 Arab refugees, including those separated from their families still in Israel, on condition that the Arab countries absorbed the remainder. In Dec. the U.N. voted \$54,900,000 for Palestine Arab refugees, and set up a special relief and works agency to handle the fund. The U.S. Foreign Aid Authorisation Act of 1950 allocated \$27,450,000 for relief of Palestine refugees.

The U.N. Palestine political committee, meeting in New York, began on Nov. 24 to consider the proposals of the conciliation commission for the internationalisation of Jerusalem. Both Israel and Jordan (each then in possession of part of the city) announced that they could not agree to this. Nevertheless, the general assembly of the U.N. in Dec. adopted a resolution (opposed by the U.K. and the U.S.A.) that Jerusalem and its environs should be administered by a permanent international regime under the aegis of the U.N. through the trusteeship council. A revised statute of Jerusalem, adopted by the U.N. general assembly April 4, 1950, proposed to apply internationalisation to the municipality of Jerusalem and an area surrounding it under a governor appointed by the trusteeship council for three years. Israel and Jordan again expressed opposition to internationalisation of anything except the holy places; while the countries of the Arab league, with Jordan abstaining, supported the U.N. proposal.

Passport. The chief British passport office moved to Clive House, Petty France, Westminster, S.W.1 on Jan. 27, 1951.

Patel, V. J. This Indian politician died Dec. 15, 1950.

Pentagon, THE. Name given to the h.q. of the defence administration of the U.S.A. It is situated on the Virginia bank of the Potomac R., 2 m. from the centre of Washington, D.C. Built 1941-43 at a cost of 4 million dollars to house the U.S. war dept. (including the air force), it also housed the naval administration from 1948. It is the world's largest office building, designed in the form of a pentagon, with four rows of buildings forming its sides, leaving a five-acre pentagonal court in the centre. The total extent of the perimeter is seven-eighths of a mile.

Persia. In 1949 the Iranian govt. reverted to the use of Persia as the name of their country in dealing with foreign countries.

Peterlee. This new town came officially into existence Sept. 24, 1950.

Philippine Islands. The capital of the Philippine Republic was formally transferred from Manila to Quezon City, July 17, 1948.

Poland. Boleslaw Bierut, chosen president of the Polish national council set up in occupied Poland in 1944 by the Poles in Moscow, remained provisional president of liberated Poland until he was formally elected president for seven years, Feb. 5, 1947, by the first post-war parliament at its opening meeting.

Nationalisation of all businesses employing more than 50 workers was decreed Jan. 3, 1946.

On Aug. 6, 1946, the Russians placed under Polish control the left as well as the right bank of the river Oder; they transferred the city and port of Stettin to Polish administration June 29, 1947. Some 2,000,000 Germans had fled in 1945 from the German territories placed under Polish occupation by the Potsdam agreement; another 2,300,000 were expelled during 1946-47, after which only 56,000 German civilians remained in the territories officially incorporated in the Polish republic by the Polish govt. Jan. 11, 1949. Polish-occupied E. Prussia was renamed Masuria in 1945; the lands between the Oder-Neisse rivers and the pre-war west frontier were in June, 1950, divided into the three provs. of Koszalin, Opole, and Zielona Gora. In the same month, the E. German govt. acknowledged the Oder-Neisse line as the frontier between Germany and Poland—a step strongly resented in W. Germany.

A purge of "right wing and nationalist elements" from the Communist party brought the expulsion in Sept., 1948, of Wladyslaw Gomulka (a vice-premier of the gov. formed in Feb., 1947) from his post of secretary-general of the party, in which he was replaced by President Bierut. Merging of the Communist and Socialist parties into the United Workers party followed in Dec. Eleven months later, Nov., 1949, Konstantin Rokossovsky (who had commanded the Russian army that failed to relieve Warsaw in 1944) was released from the Russian army for service with the Polish army. He took Polish citizenship, and was made minister of national defence and c.-in.-c. of the Polish forces, which he proceeded to reorganize on Russian lines.

Arrest of French citizens in Poland during 1949 on charges of spying, countered by arrests of Poles in France, culminated in July, 1950, in the recall of the Polish ambassador from France.

In Poland, as elsewhere in E. Europe, the Communist govt. set itself to undermine the authority of the R.C. church. R.C. printing presses were nationalised in June, 1949; a decree of Aug. 7 threatened with imprisonment anyone who attempted to act on the pope's pronouncement of July 13 warning R.C.s that they incurred excommunication if they supported Communism. The govt. took over

Caritas, a big church charity, in Jan., 1950, and in March confiscated all church estates of more than 250 acres. A month later, an agreement was made between the govt. and the bishops of Warsaw, Plock, and Lodz restricting the activities of the clergy to moral, spiritual, and ecclesiastical matters.

See also (in main text) Polish Resettlement Corps; U.N.R.R.A.

Preventive Detention. System of treatment of criminals with a long record of crime, in use in England and Wales. Under Section 21 of the Criminal Justice Act (1948) a court has the power to decide in the case of any offender, who by reason of his age and criminal record can be dealt with under the section, whether his prolonged imprisonment is expedient for the protection of society. The qualification for preventive detention under the Criminal Justice Act is much wider than the definition "habitual criminal" under the Prevention of Crime Act (1908).

The new system takes into account that the sentence in its nature is preventive rather than punitive, and that its purpose is to do whatever is possible to ensure that the offenders when released are both able and willing to lead an honest life. It is divided into three stages. In the first the prisoner is carefully studied to decide to what extent reformatory influences are likely to be effectual and what forms of training will be most useful; in the second stage the treatment approximates to that of a prisoner serving the last portion of a long sentence, but with certain additional privileges; during the third period he receives vocational training in a skilled trade, if he is fit for it, under conditions as closely approximating to freedom as possible.

Freysing, KONRAD, COUNT. This German ecclesiastic died in Berlin, Dec. 21, 1950.

Promethium. In 1949 this name was officially given to one of the rare earth elements, previously called illinium (*q.v.* in main text). Symbol Pm, atomic no. 61.

Queen Alexandra's Royal Army Nursing Corps. In 1950 this corps adopted the titles of rank used in the other units of the army, e.g. brigadier (up to 1942 matron-in-chief, later senior controller); capt. (up to 1942 sister-in-charge, later junior commander).

Queuille, HENRI (b. 1884). French politician. Born at Neuville d'Ussel, Corrèze, March 31, 1884, he studied medicine in Paris, and practised as a doctor in his native town. A Radical Socialist, he became deputy for Corrèze in 1914. He was minister of agriculture 1925-27, and again, after holding other offices, under Daladier 1938-40; in the Reynaud cabinet of 1940 he was minister of food.

In 1935 he was elected senator. After the defeat of France in 1940 he lived in retirement until 1943, when he escaped from the country to become a commissioner of state in de Gaulle's Algiers administration. Elected to the national assembly in 1946, he became premier in Sept., 1948, in a coalition of centre parties which lasted until Oct., 1949. In the succeeding govt. Queuille was vice-premier under Bidault, and in Feb., 1950, also took over the ministry of the interior. On Bidault's defeat, June 24, Queuille headed a govt. that lasted two days, and then, July 12, again became minister of the interior under René Pleven.

Quezon City. Capital of the Philippine republic. It lies 10 m. N.E. of Manila, on a site chosen by President Quezon in 1937. Originally called New Manila, it was renamed Quezon City in honour of the president after his death. It was still under construction when it was formally constituted the Philippine capital in 1948.

Ration and Rationing. Soap, rationed in the U.K. from Feb. 9, 1942, was freed from rationing Sept. 9, 1950.

Reith, 1ST BARON. In 1950 he became chairman of the Colonial Development Corporation.

Renner, KARL. This Austrian statesman died Dec. 31, 1950.

Reykjavik. The first national theatre of Iceland was opened here, April 20, 1950.

Rocket Propulsion. After the Second Great War, as a result of the successful development of jet and turbo-jet engines, the rocket was rejected as a power source for orthodox aircraft. It was seriously considered as a prime mover for human travel only if astronautic navigation should ever become possible. On the other hand, elaborate programmes were inaugurated by the govts. of the U.K., the U.S.A., and Russia to develop the rocket as a long-range missile. All three countries built up research teams containing a large proportion of German rocket scientists, but for two or three years experiments were restricted to supplies of captured V2s or adaptations thereof.

About 1948, however, both the U.K. and the U.S.A. began building single and multiple-stage rocket missiles of their own design. Early in 1949 an American-built two-stage rocket, the upper component of which was named the W.A.C. Corporal, was fired from the White Sands proving ground, New Mexico, and reached an altitude of 250 m. The rocket carried automatic instruments to record its course and altitude, but it disintegrated from the intense heat generated during its descent.

Another American rocket, the Neptune, designed for firing from the deck of a warship, reached an

altitude of 230 m. at a speed of 5,500 m.p.h. This attained an altitude of 38 m. in 75 secs. after being launched, by which time its fuel supply of liquid oxygen and alcohol was exhausted and it coasted the remaining distance under its own impetus.

Neither of these rockets was a guided missile, and they were fired to test altitude, not range; the range of such a missile would be approximately four times the apex of the trajectory (maximum alt.).

Besides being developed for military purposes (see Guided Missile in N.V.), special high-altitude rockets are used for exploring the upper atmosphere. One of these rockets, the Aerobee, is 19 ft. long and 15 in. in diameter. It is powered by two motors: one, burning solid fuel, is jettisoned when the velocity reaches 1,000 ft. per sec.; the other, using liquid fuel, carries the rocket to an altitude of over 100 m. When the Aerobee reaches its maximum altitude, an explosive charge blows off the tail, causing the rocket to fall earthwards end-over-end at a velocity of 150 ft. per sec. It carries 250 lb. of scientific equipment to record details of pressure and temperature during ascent. A Geiger counter (g.v. in N.V.) is included to register cosmic radiation, and an electronic device to measure the strength of the earth's magnetic field. Information collected by the instruments is automatically transmitted to the ground by radio, or the instruments are fitted with parachutes and released when the rocket begins to descend.

Romanones, COUNT OF. This Spanish statesman died in Madrid, Sept. 11, 1950.

Roscommon. Co. of Eire. In 1947 the co. was given four members in the Dáil.

Royal Fusiliers. A regimental museum was established in 1950 in the dépôt at the Tower of London.

Russell, BERTRAND A. W. RUSSELL, 3RD EARL. He was awarded the 1950 Nobel prize for literature.

St. Gall. Canton of Switzerland. Pop. (1950) 308,483.

St. Laurent, LOUIS STEPHEN (b. 1882). Canadian statesman. A French-speaking Canadian, he practised as a barrister for many years before entering politics in 1942 as member for East Quebec. He served in two Liberal administrations, first as minister of justice, then (1947) as minister for external affairs; and on the announcement in 1948 of MacKenzie King's forthcoming retirement, St. Laurent was elected by a

large majority of the Liberal party to succeed as their leader and thereby to the premiership. He became premier in Nov., 1948, after being summoned to attend the conference of Commonwealth prime ministers in London in Oct. because of MacKenzie King's illness. In the general election of June, 1949, he led the Liberals to a sweeping victory. He again attended the Commonwealth prime ministers' conference in London, Jan., 1951.

Senanayake, DON STEPHEN (b. 1884). Ceylonese statesman. Born Oct. 20, 1884, he was educated at St. Thomas College, Mount Lavinia, Ceylon, and spent several years as a coconut and rubber planter before entering the political field. Elected to the legislative council in 1924, he remained a member until 1942, when he assumed the offices of leader of the state council and vice-chairman of the board of ministers. As minister of agriculture and lands, 1931-47, he was responsible for works of irrigation in northern Ceylon and for colonisation schemes for the peasants. In Sept., 1947, he became the first prime minister of Ceylon, attending the Commonwealth prime ministers' conferences in London, 1948, 1949, and 1951 and presiding over the Colombo conference of Commonwealth foreign ministers, 1950. Made a privy councillor, 1950, he was the first Ceylonese to be so appointed.

Shaw, GEORGE BERNARD. He fractured his thigh in a fall, Sept. 10, 1950, and died seven weeks later, Nov. 2, at his home at Ayot St. Lawrence, Herts.

Shearer, MOIRA (b. 1926). British dancer. Born at Dunfermline, Jan. 17, 1926, her full name being Moira Shearer King, she began to study dancing at the age of 10, and after a period at the Legat school passed into the Sadler's Wells school in 1939. She first appeared on the stage with the International Ballet, 1941, joining the Sadler's Wells company in 1942 and beginning to dance principal roles in 1944. Possessed of natural lightness and speed, she was a brilliant classical dancer in Swan Lake, The Sleeping Beauty, and Cinderella, and was also successful in lighter parts in La Boutique Fantasque and Mlle. Angot. Her dancing and acting in the film *The Red Shoes* (1948) won her fame with a wide public in the U.K. and the U.S.A.

Sierra Leone. A new constitution was authorised 1950, to come into force in 1951. Under it the executive council consists of the governor and eight members (four ex-officio, and four unofficial appointed by the governor from the elected members of the legis-

lative council); and the legislative council of the governor and 28 members (seven official, two unofficial nominated, and 19 unofficial elected). A literacy test for membership of the legislative council was introduced.

Sikkim. A new treaty with India, Dec. 5, 1950, confirmed the position by which Sikkim was a protectorate of India with full internal autonomy.

Sinkiang. After the Communist victory in China in 1949, the local authorities adhered to Mao Tse-tung's regime, and in March, 1950, two 30-year agreements were signed between Russia and the Chinese Communist govt. for establishing two Sino-Soviet companies to exploit oil and non-ferrous minerals, including uranium, platinum, wolfram, chromium, molybdenum, gold, silver, and copper, in the province. Communications were to be improved by the construction of aerodromes and of a railway eastwards from Chuchak to Kansu province, and by extending the highway system.

Sligo. Co. of Eire. In 1947 Sligo, jointly with Leitrim, was given five members in the Dáil.

Snowy Mountains HYDRO-ELECTRIC AUTHORITY. See Australia in N.V.

South Africa. Chief object of the Nationalist govt. was enforcement of *apartheid* (separateness) for the different "racial" groups in the Union. The govt.'s policy involved abolition of native representation in parliament; disfranchisement of the Cape coloureds; separate schools and training for non-Europeans; confinement of tribalised natives within their own reserves, and encouragement of detribalised natives to return to the reserves; segregation of natives from coloureds, and of both from whites.

The Union of South Africa Act, 1909, laid it down that no change could be made in the parl. representation of natives and coloureds except by a two-thirds majority of all members of both houses in joint session. Malan insisted that the very small majority he could command was enough to carry the necessary legislation. In this he was opposed not only by Smuts and the United party, but also by his own minister of finance, N. C. Havenga, leader of the Afrikaner party, who said that he could not be a party to amendment of the so-called entrenched clauses by a simple majority. Havenga's opposition, however, lost its importance when the Nationalist Party's success in S.W. Africa gave Malan a majority of five over the United and Labour parties, without the help of the Afrikaners.

Steps taken towards the putting into effect of other aspects of *apartheid* included the introduction of coaches reserved for whites on the Cape suburban rlys.; banning

of military training for Africans, and the disbandment of the native military corps and the Cape corps; cessation of the training of Africans as artisans.

The dispute between South Africa and the U.N. over South-West Africa is described under South-West Africa in N.V. Another occasion of U.N. criticism of South Africa was the Union's treatment of its subjects of Indian stock. Indians were first brought into Natal during the 18th century as coolie labour for the sugar plantations. Admission of coolies was stopped in 1897; but those already in South Africa prospered and increased in numbers until in 1950 there were some 282,000 Union subjects of Indian origin. Restrictive legislation against them began with an act of 1908 forbidding them to acquire land in and near Johannesburg. This was not very strictly enforced, and a number of Indians occupied land in the restricted areas for trading. An act of 1939 reimposed full restriction in 1941, and was renewed for a further three years in 1943. Smuts's govt. in 1946 passed the Asiatic Land Tenure and Indian Representation Act; this defined areas in which Indians might acquire land, prohibited change of ownership of land elsewhere, except by consent of the minister of the interior, from or to persons of another racial group; and provided for the eventual representation of Indians in the Union parliament and the provincial council of Natal.

In the same year the govt. of India brought the position of Indians in South Africa before the U.N. general assembly, which passed a resolution condemning the Union govt. India banned trade with South Africa.

That part of the 1946 act providing for parl. representation of the Indians was repealed in 1948; and the Malan govt. announced its aim of repatriating all persons of Indian stock. In May, 1949, the U.N. general assembly recommended the holding of a round-table conference by India, Pakistan, and S. Africa. Preliminary talks in Cape Town, Feb. 6-12, 1950, proved abortive.

Many Africans also felt that they were exploited by Indian traders, and their antagonism found expression in riots, Jan. 13-15, 1949, in Durban. Fifty Indians and 87 Africans were killed; 32 Europeans, 541 Africans, and 603 Indians were injured; two factories, 652 stores, and 1,285 dwellings were damaged or destroyed. Some 25,000 Indians, and 5,000 Africans living in houses owned by Indians, took refuge in municipal emergency camps.

The S. African govt. stopped state assistance for immigrants at the end of 1948; during Jan., 1946-March, 1949, 70,000 immigrants from the U.K. entered the country.

The language census of 1946, pub. 1948, showed that 57 p.c. of the

whites spoke Afrikaans, 39 p.c. English; 61 p.c. had a knowledge of both languages (compared with 57 p.c. in 1936). Pop. (1950) 12,320,000, of whom 2,620,000 were European; 8,347,000 natives; 1,030,000 coloureds; 323,000 Asiatics.

Before attending the Commonwealth premiers conference in London, in April, 1949, Malan stated that so long as S. Africa enjoyed its present freedom there was no intention of leaving the Commonwealth. A demand made by him in 1949 for the transfer to the Union of the British protectorates of Bechuanaland, Basutoland, and Swaziland—a development envisaged by the Union Act of 1909—was answered by a British statement that no decision on this subject would be taken until the peoples of the areas, African and white, had had an opportunity to express their wishes. Malan, however, announced in 1950 his intention of resuming negotiations on this question which had been interrupted by the Second Great War.

Right of appeal to the privy council in London was abolished by S. Africa in an Act of April 25, 1950.

South-West Africa. In 1946 the S. African delegate to the U.N. general assembly stated that his govt., as provided in the U.N. charter, reserved its right to liberty of action in regard to its mandated territory of S.-W. Africa, and was consulting the wishes of the inhabitants. The legislative assembly of S.-W. Africa later voted unanimously for incorporation in the Union. The U.N., however, recommended that the territory should be placed under U.N. trusteeship.

In 1947 the S. African parl. adopted a motion to give S.-W. Africa representation in that body, although immediate incorporation was not intended. The govt. of Malan was at one with that of Smuts on this point. The S.-W. Africa Affairs (Amendment) Act, drafted after consultations with the leaders of the United and Nationalist parties in S.-W. Africa, and with representatives of the Africans, the coloureds, and the German community, was enacted by the Union, April 23, 1949. It provided that the inhabitants of European stock in the territory should elect six members to the Union house of assembly, and that four senators for S.-W. Africa (two elected by the Union parliament M.P.s and the S.-W. Africa legislative assembly; two nominated by the gov.-gen., one of whom was to represent the interests of the coloureds) should sit in the Union senate. The existing legislative assembly of 12 elected and eight nominated members was replaced by a legislative assembly of 18 members elected for five years; the existing advisory council by an executive committee, consisting of an administrator appointed for five years by the gov.-gen. and four

other members elected by the legislative assembly. These new bodies were empowered to deal with all matters not specifically reserved to Union control (e.g. police and civil aviation). The territory kept financial independence for the time being. The Union retained all powers of administration and legislation given under League of Nations mandate.

Existing tribal institutions were maintained for Africans; neither they nor the coloureds were to receive the franchise.

In July, 1949, the S. African govt. informed the U.N. that she would send no more reports on S.-W. Africa. In Dec., the U.N. general assembly decided to seek the opinion of the international court of justice. This, delivered July 11, 1950, was that S.-W. Africa remained under international mandate; that the provisions of the U.N. charter covering transfer of mandated territory to U.N. trusteeship applied to S.-W. Africa; that S. Africa needed U.N. consent to any change in the status of S.-W. Africa; but that the charter did not oblige S. Africa to place the territory under U.N. trusteeship. Malan repudiated the right of the U.N. to interfere, and on Aug. 30, 1950, elections held under the Act of 1949 returned six Nationalist members to the Union parliament, 15 Nationalist and three United party members to the new legislative assembly.

Spencer, STANLEY. British painter. His series of paintings representing the Resurrection of the Body, exhibited at the Royal Academy, 1950, was bought for the nation under the terms of the Chantry Bequest.

Stanley, OLIVER F. G. This British politician died Dec. 10, 1950.

Stephens, JAMES. This Irish poet died Dec. 26, 1950.

Stimson, HENRY LOUIS. This American lawyer and politician died in New York, Oct. 20, 1950.

Sukarno, AHMED (b. 1901). First president of the republic of Indonesia. Born at Surabaya, June 6, 1901, he was educated at Bandoeng technical high school and in 1927 helped to found the Indonesian National party. For many years a prominent figure in the nationalist movement, he was several times imprisoned by the Dutch, being in 1937 interned on the island of Flores and later in Sumatra. He returned to Java in 1942 during the Japanese occupation and after the surrender of the Japanese in Aug., 1945, he proclaimed the independence of the republic of Indonesia (Aug. 17), of which he became president. The ensuing four years of conflict between the Netherlands and the republic, culminating in the interment of Sukarno and his ministers on the island of Banka in Dec., 1948, were terminated on Nov. 19, 1949, when the charter of the trans-

fer of sovereignty and the provisional constitution of the United States of Indonesia were ratified at Jogyakarta by the cabinet of the Indonesian republic. He was elected first president of the United States of Indonesia, Dec. 16, 1949. He continued as president after he had converted the U.S.I. to a unitary state, Aug. 14, 1950.

Swinton, Sir E. D. This British soldier pub. memoirs, *I Remember*, 1948. He died at Oxford Jan. 15, 1951.

Switzerland. The census of 1950 gave the pop. as 4,696,057.

Syria. On March 13, 1949, the army chief of staff, Husni Zaim, deposed the president and the prime minister, Khaled al-Azm, and set himself up as dictator. On Aug. 14, he and his prime minister, Mohsin Berazi, were arrested, tried, and shot by a group of army officers led by Col. Sami Hinnawi. A constituent assembly elected in Nov. chose Hashem Attasi Pasha president, Dec. 14; and on Dec. 19 Hinnawi was arrested, and later released and pensioned (he was assassinated by a cousin of Berazi, Oct. 30, 1950). Attasi retained office, and Khaled al-Azm formed a new coalition govt. Dec. 28, 1949. See also Palestine in N.V.

Tassigny, J. de Lattre de. This French soldier was appointed high commissioner and c.-in-c. in Indo-China, Dec., 1950.

Thyssen, August Fritz. This German industrialist died in Buenos Aires, Feb. 8, 1951.

Town and Country Planning, Ministry Of. The name of this ministry was changed to local govt. and planning, Jan., 1951.

Trenchard, H. M. Trenchard, Viscount. This British administrator was awarded the O.M., 1951.

Trinidad. W. Indian island. Under a new constitution promulgated in 1950, the executive council consisted of nine members—three *ex officio*, five elected by the legislative council, and one nominated; the legislative council of 26 members—three *ex officio*, five nominated, and 18 elected, presided over by a speaker appointed by the governor from outside the council. First elections to the new legislature were held Sept. 18, 1950.

Truculent, H.M.S. British submarine, which sank in the Thames estuary, Jan. 12, 1950, through collision with a Swedish steamer, *Divina*. Of the 79 men aboard, only 15 were saved. A court martial found the commanding officer of the submarine guilty of "negligently or by default hazarding his ship" and he was severely reprimanded. The *Truculent*, launched 1942, had a displacement of 1,090 tons.

True Case. Ronald True died in Broadmoor Jan. 7, 1951.

Truman, Harry Shippe. President Truman's message on the state of the union to the 81st con-

gress earned the title "fair deal"; it urged prompt action to provide adequate social security, a system of prepaid medical insurance, sufficient housing, and the fulfillment of the promise, embodied in the constitution, of equal rights and opportunities for all. In his inaugural speech, Jan. 20, 1949, he outlined four points for "peace and freedom"; (1) continued support of the U.N.; (2) continued efforts to increase world trade; (3) strengthening of all freedom-loving nations; (4) assistance to under-developed areas of the world to enable their inhabitants to overcome "hunger, misery, and despair," and reach a reasonable standard of life under democratic conditions. The last came to be referred to simply as "Point 4."

Two Puerto Ricans attempted to assassinate the president in Washington, Nov. 1, 1950.

See also in N.V., Atomic Bomb; Korea; United States of America.

United States of America, The. A bill to set up compulsory federal health insurance, introduced into the Senate in 1949, was shelved; but a Housing Act, signed by the president July 15, provided for the building at public expense of 810,000 homes to be let at low rents; a slum clearance programme to cost \$1,500,000,000; and loans for farm housing to a limit of \$262,500,000.

The U.S.A. signed the North Atlantic treaty in Washington April 4, 1949, ratifying it July 25. Mutual Defence Assistance Acts in 1949 and 1950 allotted \$1,000,000,000 for each of the fiscal years 1950 and 1951 to be spent in military aid for the other countries that were parties to the treaty; these same two acts provided also more than \$500,000,000 for military aid to non-Communist countries outside the treaty. First consignment of material for Europe was a cargo of fighters and bombers picked up by the French aircraft carrier *Dixmude* at Norfolk, Va., March 8, 1950.

An act of Aug. 10, 1949, provided for closer integration of the three armed services of the U.S.A. under the control of a new minister, the secretary of defence, at the head of a new dept. of defence.

The Foreign Aid Authorisation Act for the year July, 1950-June, 1951, included an allocation of \$35,000,000 to provide technical assistance to under-developed countries—the president's "Point 4" already taken up by the U.N., which on Nov. 16, 1949, approved a plan to spend on advisory services \$36,000,000 in the first year, \$50,000,000 in the second, and set up a technical assistance board to carry it out.

In the Korean war the U.S.A. were to the fore diplomatically and militarily. It was the U.S. delegate to the U.N. who at 3 a.m. on June 25, 1950, asked the sec.-general to

call an emergency meeting of the security council. The council met that same afternoon, and adopted by nine votes to nil (Yugoslavia abstaining and Russia being absent) a resolution calling for the immediate cessation of hostilities, the withdrawal of N. Korean forces to the 38th parallel, and the giving of every assistance to the U.N. by member states, who should refrain from aiding N. Korea. On the 27th Pres. Truman announced that he had ordered U.S. air and sea forces to support S. Korea and the U.S. 7th fleet to prevent any attack on Formosa. The initial and later reverses of the U.N. forces (chiefly American) in Korea led to a revival among certain groups of isolationism. But Truman himself remained steadfast in his support of the U.N., and was able to carry the majority of his countrymen with him. American casualties were heavy: by the end of the year, 7,000 dead, 7,000 missing, and 29,000 wounded.

The population of the continental United States at the census of April 1, 1950, was 150,697,361.

Vaud. Canton of Switzerland. Pop. (1950) 376,707.

Victoria. State of Australia. An American tender was accepted, by the govt. of Victoria, Aug. 22, 1950, for the building of a dam at Eildon to control the river Goulburn 60 m. N. of Melbourne. The dam, of 13,000,000 tons and costing A£11,360,000 (£9,088,000 sterling), to take five years to build, was intended to supply power and water to a large part of Victoria.

Walton, W. T. This British composer was knighted, 1951.

War Graves Commission, Imperial. In Dec., 1939, it was decided to adopt the same procedure for graves of the Second Great War as for those of the First. The first cemetery to be completed was the Canadian cemetery at Hautot-sur-Mer, near Dieppe, dedicated in Aug., 1949. The total number of dead to be commemorated, either by headstones or on memorials, was estimated (1950) to be at least 500,000. By March, 1949, 332,000 graves had been recorded, and registers of the dead were being compiled. Those who have no known grave will again be commemorated on memorials in the various theatres of war.

The countries containing the largest number of cemeteries are France, Belgium, and the Netherlands. The graves in Italy are in 49 cemeteries and those in Germany in 13. The biggest cemeteries of the N. African campaigns are at Alamein and Halfaya-Sollum, Egypt; Tobruk and Acroma, Libya; Medjez-el-Bab, Tunisia.

A supplemental charter of 1941 empowered the commission to compile a record of civilian subjects

of the crown who died by enemy action. Bound copies of the first lists, containing more than 65,000 names, were placed in Westminster Abbey.

War Memorial. In 1950 the Imperial War Graves Commission announced proposals for the commemoration of those members of H.M. forces killed in the Second Great War whose graves are unknown. The following is a summary:

R.N. memorials to be linked with First Great War memorials at Chatham, Plymouth, Portsmouth; Royal Canadian and Royal New Zealand navies to have new memorials built in the two dominions;

Memorials to be built at Liverpool for men of the M.N. who served with the R.N.; at Lowestoft for the R. Naval Patrol Service; at Lee-on-Solent for the Fleet Air Arm;

Memorials to soldiers of the British Commonwealth to be "by campaigns," and wherever possible placed in a war cemetery. Sites in Europe selected at Trondhjem, Dunkirk, Bayeux, Groesbeek (near Nijmegen), Cassino, and Athens; in Africa, at Medjez-el-Bab, Alamein, Hargeisa, Port Sudan, Mombasa, Diego Suarez (Madagascar); in Asia, at Beirut, Singapore, Saiwan Bay (Hong Kong), and in Iraq and Persia. Sites still to be selected were for memorials for the Burma campaign, for India, and for soldiers who died at sea;

Air force memorials to be erected at Cooper's Hill, overlooking

Runnymede (for the U.K. and N.W. Europe); Malta (for central Mediterranean and W. Africa); Alamein (for Greece, Crete, the Middle East, W. Asia, and the rest of Africa); Singapore (for India, Burma, Malaya, and the Far East); and in Canada (for those who lost their lives while training in that country or in the U.S.A.).

White House, THE. Owing to its dangerous condition, President Truman had to leave the White House in 1949. In 1950-51 the whole interior was removed, foundations of reinforced concrete 20 ft. deep were made, and a new interior was installed.

Whittington. Parish of Derbyshire. At Whittington Heath near by, borings during 1948-49 reached good coal at 4,000 ft. Est. yield of the seams uncovered was a minimum of 400 million tons.

Wilson, HENRY MATTLAND WILSON, 1ST BARON. His book *Eight Years Overseas, 1939-47*, was pub. 1950.

Winant, JOHN G. American diplomatist. His book, *Our Great Harvest* (selected speeches), with intro. by Winston S. Churchill, was pub. 1950.

Woodcock, BRUCE (b. 1921). British boxer. Born at Doncaster, Yorks, Jan. 18, 1921, he was educated locally and obtained employment in the railway shops in that town. As an amateur he won the A.B.A. light-heavyweight championship in 1939, then turning professional in 1942, he became the heavyweight champion of

Great Britain and of the British Empire by knocking out Jack London in the 6th round at Tottenham, London, July 17, 1945. His victory over Al Renet (France), whom he knocked out in the 6th round at Manchester, July 29, 1946, brought him the European heavyweight title.

In 1947 he successfully defended his European title against Stephane Olek (France), winning on points over 15 rounds at Manchester, March 17, but lost to the American Joe Baki on April 15, retiring in the 7th round. Other notable fights include his win on a disqualification against Lee Savold (U.S.), Dec. 6, 1948, and his defeat of Freddie Mills by a knockout in the 14th round, June 2, 1949. In a return bout with Lee Savold, at the White City, London, June 6, 1950, advertised as being for the world heavyweight championship, he retired at the end of the 4th round.

Yukawa, HIDEKI (b. 1907). Japanese physicist. Born at Tokyo, Jan. 23, 1907, son of a geologist, he was educated at Kyoto university, where in 1932 he became a lecturer, and in 1939 professor of physics. He forecast the existence of the meson (*q.v.* in main text), 1935. In 1948 he went to the U.S.A. to work on nuclear physics, and in 1949 was appointed visiting professor of physics at Columbia university. As an outstanding pioneer in theoretical physics he was awarded the 1949 Nobel prize for physics.

Zürich. Canton of Switzerland. Pop. (1950) 772,617.
